Service Information Summary
A summary of information you need when you pull up to the fuel pump.

Accord Value Package Audio System
This owner’s manual should be considered a permanent part of the vehicle and should remain with the vehicle when it is sold.

This owner’s manual covers all models of the Fit. You may find descriptions of equipment and features that are not on your particular vehicle.

The information and specifications included in this publication were in effect at the time of approval for printing. Honda Motor Co., Ltd. reserves the right, however, to discontinue or change specifications or design at any time without notice and without incurring any obligation whatsoever.

POUR CLIENTS CANADIEN
AVIS IMPORTANT: Si vous avez besoin d’un Manuel du Conducteur en français, veuillez demander à votre concessionnaire de commander le numéro de pièce 33SAAC00
Congratulations! Your selection of a 2007 Honda Fit was a wise investment. It will give you years of driving pleasure.

One of the best ways to enhance the enjoyment of your new vehicle is to read this manual. In it, you will learn how to operate its driving controls and convenience items. Afterwards, keep this owner’s manual in your vehicle so you can refer to it at any time.

Several warranties protect your new vehicle. Read the warranty booklet thoroughly so you understand the coverages and are aware of your rights and responsibilities.

Maintaining your vehicle according to the schedules given in this manual helps to keep your driving trouble-free while it preserves your investment. When your vehicle needs maintenance, keep in mind that your dealer’s staff is specially trained in servicing the many systems unique to your vehicle. Your dealer is dedicated to your satisfaction and will be pleased to answer any questions and concerns.

As you read this manual, you will find information that is preceded by a [NOTICE] symbol. This information is intended to help you avoid damage to your vehicle, other property, or the environment.

California Proposition 65 Warning

WARNING: This product contains or emits chemicals known to the state of California to cause cancer and birth defects or other reproductive harm.

Event Data Recorders

This vehicle is equipped with one or more recording devices commonly referred to as event data recorders or sensing and diagnostic modules.

California Perchlorate Contamination Prevention Act

The airbags, seat belt tensioners, and CR type batteries in this vehicle contain perchlorate materials — special handling may apply. See www.dtsc.ca.gov/hazardouswaste/perchlorate.
Your safety, and the safety of others, is very important. And operating this vehicle safely is an important responsibility.

To help you make informed decisions about safety, we have provided operating procedures and other information on labels and in this manual. This information alerts you to potential hazards that could hurt you or others.

Of course, it is not practical or possible to warn you about all the hazards associated with operating or maintaining your vehicle. You must use your own good judgement.

You will find this important safety information in a variety of forms, including:

- **Safety Labels** — on the vehicle.
- **Safety Messages** — preceded by a safety alert symbol and one of three signal words: **DANGER**, **WARNING**, or **CAUTION**.

These signal words mean:

- **DANGER**
  You WILL be KILLED or SERIOUSLY HURT if you don’t follow instructions.

- **WARNING**
  You CAN be KILLED or SERIOUSLY HURT if you don’t follow instructions.

- **CAUTION**
  You CAN be HURT if you don’t follow instructions.

- **Safety Headings** — such as Important Safety Reminders or Important Safety Precautions.
- **Safety Section** — such as Driver and Passenger Safety.
- **Instructions** — how to use this vehicle correctly and safely.

This entire book is filled with important safety information — please read it carefully.
Your Vehicle at a Glance

A/T model is shown.

You’ll find many safety recommendations throughout this section, and throughout this manual. The recommendations on this page are the ones we consider to be the most important.

**Always Wear Your Seat Belt**
A seat belt is your best protection in all types of collisions. Airbags are designed to supplement seat belts, not replace them. So even though your vehicle is equipped with airbags, make sure you and your passengers always wear your seat belts, and wear them properly (see page 14).

**Restrain All Children**
Children age 12 and under should ride properly restrained in a back seat, not the front seat. Infants and small children should be restrained in a child seat. Larger children should use a booster seat and a lap/shoulder belt until they can use the belt properly without a booster seat (see pages 34 – 52).

**Be Aware of Airbag Hazards**
While airbags can save lives, they can cause serious or fatal injuries to occupants who sit too close to them, or are not properly restrained. Infants, young children, and short adults are at the greatest risk. Be sure to follow all instructions and warnings in this manual.

**Don’t Drink and Drive**
Alcohol and driving don’t mix. Even one drink can reduce your ability to respond to changing conditions, and your reaction time gets worse with every additional drink. So don’t drink and drive, and don’t let your friends drink and drive, either.

**Control Your Speed**
Excessive speed is a major factor in crash injuries and deaths. Generally, the higher the speed, the greater the risk, but serious injuries can also occur at lower speeds. Never drive faster than is safe for current conditions, regardless of the maximum speed posted.

**Keep Your Vehicle in Safe Condition**
Having a tire blowout or a mechanical failure can be extremely hazardous. To reduce the possibility of such problems, check your tire pressures and condition frequently, and perform all regularly scheduled maintenance (see page 167).
Your vehicle is equipped with many features that work together to protect you and your passengers during a crash.

Some features do not require any action on your part. These include a strong steel framework that forms a safety cage around the passenger compartment, front and rear crush zones, a collapsible steering column, and tensioners that tighten the front seat belts in a crash.

However, you and your passengers can’t take full advantage of these features unless you remain sitting in a proper position and always wear your seat belts. In fact, some safety features can contribute to injuries if they are not used properly.

The following pages explain how you can take an active role in protecting yourself and your passengers.
Your Vehicle’s Safety Features

Seat Belts
Your vehicle is equipped with seat belts in all seating positions.

Your seat belt system also includes an indicator on the instrument panel and a beeper to remind you and your passengers to fasten your seat belts.

Why Wear Seat Belts
Seat belts are the single most effective safety device for adults and larger children. (Infants and smaller children must be properly restrained in child seats.)

Not wearing a seat belt properly increases the chance of serious injury or death in a crash, even though your vehicle has airbags.

Be sure you and your passengers always wear seat belts and wear them properly.

When properly worn, seat belts:

- Keep you connected to the vehicle so you can take advantage of the vehicle’s built-in safety features.
- Help protect you in almost every type of crash, including frontal, side, and rear impacts and rollovers.
- Help keep you from being thrown against the inside of the vehicle.
- Keep you from being thrown out of the vehicle.
- Help keep you in a good position should the airbags ever deploy. A good position reduces the risk of injury from an inflating airbag and allows you to get the best advantage from the airbag.
- Of course, seat belts cannot completely protect you in every crash. But in most cases, seat belts can reduce your risk of serious injury.

What You Should Do:
Always wear your seat belt, and make sure you wear it properly.
Your vehicle has a supplemental restraint system (SRS) with front airbags to help protect the heads and chests of the driver and a front seat passenger during a moderate to severe frontal collision (see page 25 for more information on how your front airbags work).

Your vehicle also has side airbags to help protect the upper torso of the driver or a front seat passenger during a moderate to severe side impact (see page 28 for more information on how your side airbags work).

Your vehicle also has side curtain airbags to help protect the heads of the driver, front passenger, and passengers in the outer rear seating positions during a moderate to severe side impact (see page 30 for more information on how your side curtain airbags work).
Your Vehicle’s Safety Features

The most important things you need to know about your airbags are:

- **Airbags do not replace seat belts.** They are designed to supplement the seat belts.

- **Airbags offer no protection in rear impacts, or minor frontal or side collisions.**

- **Airbags can pose serious hazards.** To do their job, airbags must inflate with tremendous force. So while airbags help save lives, they can cause minor injuries or more serious or even fatal injuries if occupants are not properly restrained or sitting properly.

**What you should do:** Always wear your seat belt properly, and sit upright and as far back from the steering wheel as possible while allowing full control of the vehicle. A front passenger should move their seat as far back from the dashboard as possible.

The rest of this section gives more detailed information about how you can maximize your safety.

Remember, however, that no safety system can prevent all injuries or deaths that can occur in a severe crash, even when seat belts are properly worn and the airbags deploy.
Introduction
The following pages provide instructions on how to properly protect the driver, adult passengers, and teenage children who are large enough and mature enough to drive or ride in the front.

See pages 34 – 38 for important guidelines on how to properly protect infants, small children, and larger children who ride in your vehicle.

1. Close and Lock the Doors
After everyone has entered the vehicle, be sure the doors and the tailgate are closed and locked.

Your vehicle has a door and tailgate open indicator on the instrument panel to indicate when any door or the tailgate is not tightly closed.

Locking the doors reduces the chance of someone being thrown out of the vehicle during a crash, and it helps prevent passengers from accidentally opening a door and falling out.

Locking the doors also helps prevent an outsider from unexpectedly opening a door when you come to a stop.

See page 78 for how to lock the doors, and page 62 for how the door and tailgate open indicator works.

2. Adjust the Front Seats
Adjust the driver’s seat as far to the rear as possible while allowing you to maintain full control of the vehicle. Have a front passenger adjust their seat as far to the rear as possible.

CONTINUED
If you sit too close to the steering wheel or dashboard, you can be seriously injured by an inflating front airbag, or by striking the steering wheel or dashboard.

The National Highway Traffic Safety Administration and Transport Canada recommend that drivers allow at least 10 inches (25 cm) between the center of the steering wheel and the chest. In addition to adjusting the seat, you can adjust the steering wheel up and down (see page 74).

If you cannot get far enough away from the steering wheel and still reach the controls, we recommend that you investigate whether some type of adaptive equipment may help.

### 3. Adjust the Seat-Backs

Adjust the driver’s seat-back to a comfortable, upright position, leaving ample space between your chest and the airbag cover in the center of the steering wheel.

Passengers with adjustable seat-backs should also adjust their seat-back to a comfortable, upright position.
Adjust the driver’s head restraint so the back of your head rests against the center of the restraint.

Have passengers adjust their head restraints properly as well. Taller persons should adjust their restraint as high as possible.

When a passenger is seated in the rear center seating position, make sure the center head restraint is in its highest position.

Properly adjusted head restraints will help protect occupants from whiplash and other crash injuries.

See page 86 for how to adjust the head restraints.
5. Fasten and Position the Seat Belts

Insert the latch plate into the buckle, then tug on the belt to make sure the belt is securely latched. Check that the belt is not twisted, because a twisted belt can cause serious injuries in a crash.

The seat belt in the center position of the back seat can be unlatched and retracted to allow the back seat to be folded up or down. This seat belt should be latched whenever the seat-back is in an upright position. See page 92 for how to unlatch and relatch the seat belt.

Position the lap part of the belt as low as possible across your hips, then pull up on the shoulder part of the belt so the lap part fits snugly. This lets your strong pelvic bones take the force of a crash and reduces the chance of internal injuries.

If the seat belt touches or crosses your neck, or if it crosses your arm instead of your shoulder, you need to adjust the seat belt anchor height.

This spreads the forces of a crash over the strongest bones in your upper body.

**WARNING**

Improperly positioning the seat belts can cause serious injury or death in a crash.

Make sure all seat belts are properly positioned before driving.

If necessary, pull up on the belt again to remove any slack, then check that the belt rests across the center of your chest and over your shoulder.
After all occupants have adjusted their seats and put on seat belts, it is very important that they continue to sit upright, well back in their seats, with their feet on the floor, until the vehicle is parked and the engine is off.

Sitting improperly can increase the chance of injury during a crash. For example, if an occupant slouches, lies down, turns sideways, sits forward, leans forward or sideways, or puts one or both feet up, the chance of injury during a crash is greatly increased.

Never place the shoulder portion of a lap/shoulder belt under your arm or behind your back. This could cause very serious injuries in a crash.

If a seat belt does not seem to work properly, it may not protect the occupant in a crash.

No one should sit in a seat with an inoperative seat belt. Using a seat belt that is not working properly can result in serious injury or death. Have your dealer check the belt as soon as possible.

See page 18 for additional information about your seat belts and how to take care of them.

6. Maintain a Proper Sitting Position
After all occupants have adjusted their seats and put on seat belts, it is very important that they continue to sit upright, well back in their seats, with their feet on the floor, until the vehicle is parked and the engine is off.

Sitting improperly can increase the chance of injury during a crash. For example, if an occupant slouches, lies down, turns sideways, sits forward, leans forward or sideways, or puts one or both feet up, the chance of injury during a crash is greatly increased.

CONTINUED
If you are pregnant, the best way to protect yourself and your unborn child when driving or riding in a vehicle is to always wear a seat belt, and keep the lap part of the belt as low as possible across the hips.

When driving, remember to sit upright and adjust the seat as far back as possible while allowing full control of the vehicle. When riding as a front passenger, adjust the seat as far back as possible.

This will reduce the risk of injuries to both you and your unborn child that can be caused by a crash or an inflating front airbag.

Each time you have a checkup, ask your doctor if it’s okay for you to drive.

In addition, an occupant who is out of position in the front seat can be seriously or fatally injured in a crash by striking interior parts of the vehicle or being struck by an inflating front airbag.

### WARNING

Sitting improperly or out of position can result in serious injury or death in a crash.

Always sit upright, well back in the seat, with your feet on the floor.

**Advice for Pregnant Women**

If you are pregnant, the best way to protect yourself and your unborn child when driving or riding in a vehicle is to always wear a seat belt, and keep the lap part of the belt as low as possible across the hips.
Additional Safety Precautions

- **Never let passengers ride in the cargo area or on top of a folded-down back seat.** If they do, they could be very seriously injured in a crash.

- **Never let passengers ride in the area in front of a folded-up rear seat or on top of a folded-down rear seat.** If they do, they could be very seriously injured in a crash.

- **Passengers should not stand up or change seats while the vehicle is moving.** A passenger who is not wearing a seat belt during a crash or emergency stop can be thrown against the inside of the vehicle, against other occupants, or out of the vehicle.

- **Two people should never use the same seat belt.** If they do, they could be very seriously injured in a crash.

- **Do not put any accessories on seat belts.** Devices intended to improve occupant comfort or reposition the shoulder part of a seat belt can reduce the protective capability of the belt and increase the chance of serious injury in a crash.

- **Do not place hard or sharp objects between yourself and a front airbag.** Carrying hard or sharp objects on your lap, or driving with a pipe or other sharp object in your mouth, can result in injuries if your front airbag inflates.

- **Keep your hands and arms away from the airbag covers.** If your hands or arms are close to an airbag cover, they could be injured if the airbag inflates.

- **Do not attach or place objects on the front airbag covers.** Objects on the covers marked “SRS AIRBAG” could interfere with the proper operation of the airbags or be propelled inside the vehicle and hurt someone if the airbags inflate.

- **Do not attach solid objects on or near a door.** If a side airbag or a side curtain airbag inflates, a cup holder or other solid object attached on or near the door could be propelled inside the vehicle and hurt someone.
Seat Belt System Components
Your seat belt system includes lap/shoulder belts in all five seating positions. The front seat belts are also equipped with automatic seat belt tensioners.

This system uses the same sensors as the front airbags to monitor whether the front seat belts are latched or unlatched, and how much weight is on the front passenger’s seat (see page 27 and 28).

The seat belt system includes an indicator on the instrument panel and a beeper to remind you and your passengers to fasten your seat belts.

This system monitors the front seat belts. If you turn the ignition switch to the ON (II) position before your seat belt is fastened, the beeper will sound and the indicator will flash. If your seat belt is not fastened before the beeper stops, the indicator will stop flashing but remain on.

If a front passenger does not fasten their seat belt, the indicator will come on about 6 seconds after the ignition switch is turned to the ON (II) position.

If either the driver or a front passenger does not fasten their seat belt while driving, the beeper will sound and the indicator will flash again at regular intervals.

When no one is sitting in the front passenger’s seat, or a child or small adult is riding there, the indicator should not come on and the beeper should not sound.

If the indicator comes on or the beeper sounds when the driver’s seat belt is latched and there is no front seat passenger and no items on the front seat, something may be interfering with the monitoring system. Look for and remove:

- Any items under the front passenger’s seat.
- Any objects hanging on the seat or in the seat-back pocket.
- Any objects, such as a folded-down back seat, that is touching the rear of the seat-back.

If no obstructions are found, have your vehicle checked by a dealer.
Lap/Shoulder Belt
The lap/shoulder belt goes over your shoulder, across your chest, and across your hips.

To fasten the belt, insert the latch plate into the buckle, then tug on the belt to make sure the buckle is latched (see page 14 for how to properly position the belt).

To unlock the belt, press the red PRESS button on the buckle. Guide the belt across your body so that it retracts completely. After exiting the vehicle, be sure the belt is out of the way and will not get closed in the door.

All seat belts have an emergency locking retractor. In normal driving, the retractor lets you move freely in your seat while it keeps some tension on the belt. During a collision or sudden stop, the retractor automatically locks the belt to help restrain your body.

The seat belts in all positions except the driver's have an additional locking mechanism that must be activated to secure a child seat (see page 45).

If the shoulder part of the belt is pulled all the way out, the locking mechanism will activate. The belt will retract, but it will not allow the passenger to move freely.

To deactivate the locking mechanism, unlatch the buckle and let the seat belt fully retract. To refasten the seat belt, pull it out only as far as needed.

The lap/shoulder belt in the center seating position on the rear seat is equipped with a detachable seat belt that has two parts: a small latch plate and an anchor buckle.

The detachable seat belt should normally be latched whenever the seat-backs are in an upright position. For more information about the detachable seat belt, see page 92.
For added protection, the front seat belts are equipped with automatic seat belt tensioners. When activated, the tensioners immediately tighten the belts to help hold the driver and a front passenger in position.

The tensioners are designed to activate in any collision severe enough to cause the front airbags to deploy.

If a side airbag or side curtain airbag deploys during a side impact, the tensioner on that side of the vehicle will also deploy.

The tensioners can also be activated during a collision in which the front airbags do not deploy. In this case, the airbags would not be needed, but the additional restraint could be helpful.

When the tensioners are activated, the seat belts will remain tight until they are unbuckled.

Seat Belt Maintenance
For safety, you should check the condition of your seat belts regularly.

Pull each belt out fully, and look for frays, cuts, burns, and wear. Check that the latches work smoothly and the belts retract easily. If a belt does not retract easily, cleaning the belt may correct the problem (see page 192). Any belt that is not in good condition or working properly will not provide good protection and should be replaced as soon as possible.

Honda provides a limited warranty on seat belts for U.S. models. See your Honda Warranty Information booklet for details.
If a seat belt is worn during a crash, it must be replaced by your dealer. A belt that has been worn during a crash may not provide the same level of protection in a subsequent crash.

The dealer should also inspect the anchors for damage and replace them if needed. If the automatic seat belt tensioners activate during a crash, they must be replaced.

**WARNING**

Not checking or maintaining seat belts can result in serious injury or death if the seat belts do not work properly when needed.

Check your seat belts regularly, and have any problem corrected as soon as possible.
Airbag System Components

(1) Driver’s Front Airbag
(2) Passenger’s Front Airbag
(3) Control Unit
(4) Front Seat Belt Tensioners
(5) Side Airbags
(6) Driver’s Seat Position Sensor
(7) Front Passenger’s Weight Sensors
(8) Front Impact Sensors
(9) Passenger Airbag Off Indicator
(10) Occupant Position Detection System (OPDS) Sensors
(11) Front Passenger’s Weight Sensors/OPDS Sensors Control Unit
(12) Outer Lap Tensioners
(13) SRS Indicator
Your airbag system includes:

- Two SRS (supplemental restraint system) front airbags. The driver’s airbag is stored in the center of the steering wheel; the front passenger’s airbag is stored in the dashboard. Both are marked “SRS AIRBAG” (see page 25).

- Two side airbags, one for the driver and one for a front passenger. The airbags are stored in the outer edges of the seat-backs. Both are marked “SIDE AIRBAG” (see page 28).

- Two side curtain airbags, one for each side of the vehicle. The airbags are stored in the ceiling, above the side windows. The front and rear pillars are marked “SIDE CURTAIN AIRBAG” (see page 30).

Additional Information About Your Airbags
• Automatic front seat belt tensioners (see page 20).

• Sensors that can detect a moderate to severe front impact or side impact.

• Sensors that can detect whether a child is in the passenger’s side airbag path and signal the control unit to turn the airbag off (see page 29).

• Sensors that can detect whether the driver’s seat belt and a front passenger’s seat belt is latched or unlatched (see page 18).

• A driver’s seat position sensor that monitors the distance of the seat from the front airbag. If the seat is too far forward, the airbag will inflate with less force (see page 27).

• Weight sensors that monitor the weight on the front passenger’s seat. If the weight is about 65 lbs (29 kg) or less (the weight of an infant or small child), the passenger’s front airbag will be turned off (see page 27).

• A sophisticated electronic system that continually monitors and records information about the sensors, the control unit, the airbag activators, the seat belt tensioners, and driver and front passenger seat belt use when the ignition switch is in the ON (II) position.

• An indicator on the instrument panel that alerts you to a possible problem with your airbags, sensors, or seat belt tensioners (see page 30).

• An indicator on the instrument panel that alerts you that the passenger’s side airbag has been turned off (see page 31).

• An indicator on the dashboard that alerts you that the passenger’s front airbag has been turned off (see page 31).

• Emergency backup power in case your vehicle’s electrical system is disconnected in a crash.
During a frontal crash, your seat belt restrains your lower body and torso, and the front airbag helps protect your head and chest.

Although both airbags normally inflate within a split second of each other, it is possible for only one airbag to deploy.

This can happen if the severity of a collision is at the margin, or threshold, that determines whether or not the airbags will deploy. In such cases, the seat belt will provide sufficient protection, and the supplemental protection offered by the airbag would be minimal.

Only the driver’s airbag can deploy if there is no passenger in the front seat, or if the advanced airbag system has turned the passenger’s airbag off (see page 27).

After inflating, the front airbags immediately deflate, so they won’t interfere with the driver’s visibility, or the ability to steer or operate other controls.

The total time for inflation and deflation is one-tenth of a second, so fast that most occupants are not aware that the airbags deployed until they see them lying in their laps.

CONTINUED
After a crash, you may see what looks like smoke. This is actually powder from the airbag's surface. Although the powder is not harmful, people with respiratory problems may experience some temporary discomfort. If this occurs, get out of the vehicle as soon as it is safe to do so.

### Dual-Stage Airbags

Your front airbags are dual-stage airbags. This means they have two inflation stages that can be ignited sequentially or simultaneously, depending on crash severity.

In a **more severe** crash, both stages will ignite simultaneously to provide the quickest and greatest protection.

In a **less severe** crash, one stage will ignite first, then the second stage will ignite a split second later. This provides longer airbag inflation time with a little less force.

### Dual-Threshold Airbags

Your front airbags are also dual-threshold airbags. Airbags with this feature have two deployment thresholds that depend on whether sensors detect the occupant is wearing a seat belt or not.

If the occupant's belt is **not latched**, the airbag will deploy at a slightly lower threshold, because the occupant would need extra protection.

If the occupant's belt is **latched**, the airbag will inflate at a slightly higher threshold, when the airbag would be needed to supplement the protection provided by the seat belt.
Advanced Airbags

Your front airbags are also advanced airbags. The main purpose of this feature is to help prevent airbag-caused injuries to short drivers and children who ride in front.

For both advanced airbags to work properly:

- Occupants must sit upright and wear their seat belts properly.
- Do not spill any liquids on or under the seats, cover the sensors, or put any objects or metal items under the front seats.
- Back-seat passengers should not put their feet under the front seats.

Failure to follow these instructions could damage the sensors or prevent them from working properly.

The driver’s advanced front airbag system includes a seat position sensor under the seat. If the seat is too far forward, the airbag will inflate with less force, regardless of the severity of the impact.

If there is a problem with the sensor, the SRS indicator will come on, and the airbag will inflate in the normal manner regardless of the driver’s seating position.

The passenger’s advanced front airbag system has weight sensors under the seat. Although Honda does not encourage carrying an infant or small child in front, if the sensors detect the weight of an infant or small child (up to about 65 lbs or 29 kg), the system will automatically turn the passenger’s front airbag off.

Be aware that objects placed on the passenger’s seat can also cause the airbag to be turned off.
When the airbag is turned off, a “passenger airbag off” indicator in the center of the dashboard comes on (see page 31).

If the weight sensors detect there is no passenger in the front seat, the airbag will be off. However, the passenger airbag off indicator will not come on.

To ensure that the passenger’s advanced front airbag system will work properly, do not do anything that would increase or decrease the weight on the front passenger’s seat. This includes:

• A rear passenger pushing or pulling on the back of the front passenger’s seat.
• Moving the front seat forcibly back against cargo on the seat or floor behind it.
• Hanging heavy items on the front passenger seat, or placing heavy items in the seat-back pocket.
• Moving the front seat or seat-back forcibly back against the folded rear seat.

If your vehicle has optional floor mats, make sure the mat behind the front passenger’s seat is hooked to the floor mat anchor (see page 192). If it is not, the mat may interfere with the proper operation of the sensors and operation of the seat.

If you ever have a moderate to severe side impact, sensors will detect rapid acceleration and signal the control unit to instantly inflate either the driver’s or the passenger’s side airbag and activate the seat belt tensioner.
Only one airbag will deploy during a side impact. If the impact is on the passenger's side, the passenger's side airbag will deploy even if there is no passenger.

To get the best protection from the side airbags, front seat occupants should wear their seat belts and sit upright and well back in their seats.

**Side Airbag Cutoff System**

Your vehicle has a side airbag cutoff system designed primarily to protect a child riding in the front passenger’s seat.

Although Honda does not encourage children to ride in front, if sensors in the seat detect a child has leaned into the side airbag’s deployment path, the airbag will shut off.

The side airbag may also shut off if a short adult leans sideways, or a larger adult slouches and leans sideways into the airbag’s deployment path.

Objects placed on the front passenger seat can also cause the side airbag to be shut off.

If the side airbag off indicator comes on (see page 31), have the passenger sit upright. Once the passenger is out of the airbag’s deployment path, the system will turn the airbag back on, and the indicator will go out.

There will be some delay between the moment the passenger moves into or out of the airbag deployment path and when the indicator comes on or goes off.

A front seat passenger should not use a cushion or other object as a backrest. It may prevent the cutoff system from working properly.
Additional Information About Your Airbags

How Your Side Curtain Airbags Work

If the impact is on the passenger’s side, the passenger’s side curtain airbag will inflate even if there are no occupants on that side of the vehicle.

To get the best protection from the side curtain airbags, occupants should wear their seat belts and sit upright and well back in their seats.

In a moderate to severe side impact, sensors will detect rapid acceleration and signal the control unit to instantly inflate the side curtain airbag and activate the seat belt tensioner on the driver’s or the passenger’s side of the vehicle.

How the SRS Indicator Works

The SRS indicator alerts you to a potential problem with your airbags or seat belt tensioners.

When you turn the ignition switch to the ON (II) position, this indicator comes on briefly then goes off. This tells you the system is working properly.

If the indicator comes on at any other time, or does not come on at all, you should have the system checked by your dealer. For example:

- If the SRS indicator does not come on after you turn the ignition switch to the ON (II) position.
- If the indicator stays on after the engine starts.
- If the indicator comes on or flashes on and off while you drive.
Additional Information About Your Airbags

If you see any of these indications, the airbags and seat belt tensioners may not work properly when you need them.

**WARNING**

Ignoring the SRS indicator can result in serious injury or death if the airbag systems or tensioners do not work properly.

Have your vehicle checked by a dealer as soon as possible if the SRS indicator alerts you to a possible problem.

### How the Side Airbag Off Indicator Works

<table>
<thead>
<tr>
<th>U.S.</th>
<th>Canada</th>
</tr>
</thead>
</table>

This indicator alerts you that the passenger's side airbag has been automatically shut off. It does **not** mean there is a problem with your side airbags.

When you turn the ignition switch to the ON (II) position, the indicator should come on briefly and then go off (see page 61). If it doesn’t come on, stays on, or comes on while driving without a passenger in the front seat, have the system checked.

### How the Passenger Airbag Off Indicator Works

This indicator alerts you that the passenger’s front airbag has been shut off because weight sensors detect about 65 lbs (29 kg) or less (the weight of an infant or small child) on the front passenger’s seat. It does **not mean** there is a problem with the airbag.

CONTINUED
Additional Information About Your Airbags

Be aware that objects placed on the front seat can cause the indicator to come on.

If no weight is detected on the front seat, the airbag will be automatically shut off. However, the indicator will not come on.

The passenger airbag off indicator may come on and off repeatedly if the total weight on the seat is near the airbag cutoff threshold.

If a passenger is riding in front, move the seat as far to the rear as possible, and have the passenger sit upright and wear the seat belt properly.

If the indicator comes on with no front seat passenger and no objects on the seat, or with an adult riding there, something may be interfering with the weight sensors. Look for and remove:

- Any items under the front passenger’s seat.
- Any object, hanging on the seat or in the seat-back pocket.
- Any object, such as a folded-down back seat, that is touching the rear of the seat-back.

If no obstructions are found, have your vehicle checked by a dealer as soon as possible.

Airbag Service

Your airbag systems are virtually maintenance free, and there are no parts you can safely service. However, you must have your vehicle serviced if:

- **An airbag ever inflates.** Any airbag that has deployed must be replaced along with the control unit and other related parts. Any seat belt tensioner that activates must also be replaced.

Do not try to remove or replace any airbag by yourself. This must be done by an authorized dealer or a knowledgeable body shop.

- **The SRS indicator alerts you to a problem.** Take your vehicle to an authorized dealer as soon as possible. If you ignore this indication, your airbags may not operate properly.
Additional Information About Your Airbags

- If your vehicle has a moderate to severe impact. Even if your airbags do not inflate, your dealer should inspect the driver’s seat position sensor, the front passenger’s weight sensors, the front seat belt tensioners, and all seat belts worn during the crash to make sure they are operating properly.

- Additional Safety Precautions
  - Do not attempt to deactivate your airbags. Together, airbags and seat belts provide the best protection.
  - Do not tamper with airbag components or wiring for any reason. Tampering could cause the airbags to deploy, possibly causing very serious injury.
  - Do not expose the front passenger’s seat-back to liquid. If water or another liquid soaks into a seat-back, it can prevent the side airbag cutoff system from working properly.

- Do not cover or replace front seat-back covers without consulting your dealer. Improperly replacing or covering front seat-back covers can prevent your side airbags from inflating during a side impact.

- Do not remove or modify a front seat without consulting your dealer. This could make the driver’s seat position sensor or the front passenger’s weight sensors ineffective. If it is necessary to remove or modify a front seat to accommodate a person with disabilities, first contact Honda Automobile Customer Service at (800) 999-1009.
If you have children, or ever need to drive with a child in your vehicle, be sure to read this section. It begins with important general guidelines, then presents special information for infants, small children, and larger children.

Children depend on adults to protect them. However, despite their best intentions, many adults do not know how to properly protect child passengers.

If you have children, or ever need to drive with a child in your vehicle, be sure to read this section. It begins with important general guidelines, then presents special information for infants, small children, and larger children.

All Children Must Be Restrained
Each year, many children are injured or killed in vehicle crashes because they are either unrestrained or not properly restrained. In fact, vehicle accidents are the number one cause of the death of children aged 12 and under.

To reduce the number of child deaths and injuries, every state and Canadian province requires that infants and children be properly restrained when they ride in a vehicle.

Infants and small children must be restrained in an approved child seat that is properly secured to the vehicle (see pages 39 – 48).

**WARNING**

Children who are unrestrained or improperly restrained can be seriously injured or killed in a crash.

Any child too small for a seat belt should be properly restrained in a child seat. A larger child should be properly restrained with a seat belt and use a booster seat if necessary.

Larger children must be restrained with a lap/shoulder belt and ride on a booster seat until the seat belt fits them properly (see pages 49 – 52).
Protecting Children — General Guidelines

All Children Should Sit in a Back Seat
According to accident statistics, children of all ages and sizes are safer when they are restrained in a back seat. The National Highway Traffic Safety Administration and Transport Canada recommend that all children aged 12 and under be properly restrained in a back seat. Some states have laws restricting where children may ride.

Children who ride in back are less likely to be injured by striking interior vehicle parts during a collision or hard braking. Also, children cannot be injured by an inflating front airbag when they ride in the back.

The Passenger’s Front Airbag Can Pose Serious Risks
Front airbags have been designed to help protect adults in a moderate to severe frontal collision. To do this, the passenger’s front airbag is quite large, and it can inflate with enough force to cause very serious injuries.

Even though your vehicle has an advanced front airbag system that automatically turns the passenger’s front airbag off (see page 31), please follow these guidelines:

Infants
Never put a rear-facing child seat in the front seat of a vehicle equipped with a passenger’s front airbag. If the airbag inflates, it can hit the back of the child seat with enough force to kill or very seriously injure an infant.

Small Children
Placing a forward-facing child seat in the front seat of a vehicle equipped with a passenger’s front airbag can be hazardous. If the vehicle seat is too far forward, or the child’s head is thrown forward during a collision, an inflating front airbag can strike the child with enough force to kill or very seriously injure a small child.

Larger Children
Children who have outgrown child seats are also at risk of being injured or killed by an inflating passenger’s front airbag. Whenever possible, larger children should sit in the back seat, on a booster seat if needed, and be properly restrained with a seat belt (see page 49 for important information about protecting larger children).
To remind you of the passenger’s front airbag hazards, and that children must be properly restrained in a back seat, your vehicle has warning labels on the dashboard (U.S. models) and on the front visors. Please read and follow the instructions on these labels.

### U.S. Models

**SUN VISORS**

![AIR BAG WARNING]

**WARNING**

**EVEN WITH ADVANCED AIR BAGS**
- Children can be killed or seriously injured by the air bag.
- The back seat is the safest place for children.
- Never put a rear-facing child seat in the front.
- Always use seat belts and child restraints.
- See owner’s manual for more information about air bags.

### Canadian Models

**SUN VISORS**

**CAUTION:**
- TO AVOID SERIOUS INJURY:
  - FOR MAXIMUM SAFETY PROTECTION IN ALL TYPES OF CRASHES YOU MUST ALWAYS WEAR YOUR SAFETY BELT.
  - DO NOT INSTALL REARWARD-FACING CHILD SEATS IN ANY FRONT PASSENGER SEAT POSITION.
  - DO NOT SIT OR LEAN UNNECESSARILY CLOSE TO THE AIR BAG.
  - DO NOT PLACE ANY OBJECTS OVER THE AIR BAG OR BETWEEN THE AIR BAG AND YOURSELF.
  - SEE THE OWNER’S MANUAL FOR FURTHER INFORMATION AND EXPLANATIONS.

**PRECAUTIONS:**
- POUR ÉVITER DES BLESSURES GRAVES:
  - POUR PROTEGER D’UNE PROTECTION MAXIMALE LORS D’UNE COLLISION BOUCLEZ TOUJOURS VOTRE CEINTURE DE SÉCURITÉ.
  - N’INSTALLEZ JAMAIS UN SIÈGE POUR ENFANTS FAISANT FACE À L’ARRIERE SUR LE SIÈGE DU PASSAGER AVANT.
  - NE VOUS APPUYEZ PAS ET NE VOUS ASSOYEZ PAS PRÈS DU COUSSIN GONFLABLE.
  - NE DEPOSEZ AUCUN OBJET SUR LE COUSSIN GONFLABLE DU ENTRE LE COUSSIN GONFLABLE ET VOUS.
  - LISEZ LE GUIDE UTILISATEUR POUR DE PLUS AMPLES RENSEIGNEMENTS.
Protecting Children — General Guidelines

If You Must Drive with Several Children
Your vehicle has a back seat where children can be properly restrained. If you ever have to carry a group of children, and a child must ride in front:

• Place the largest child in the front seat, provided the child is large enough to wear the lap/shoulder belt properly (see page 49).

• Move the vehicle seat as far to the rear as possible (see page 85).

• Have the child sit upright and well back in the seat (see page 15).

• Make sure the seat belt is properly positioned and secured (see page 14).

If a Child Requires Close Attention
Many parents say they prefer to put an infant or a small child in the front passenger seat so they can watch the child, or because the child requires attention.

Placing a child in the front seat exposes the child to hazards in a frontal collision, and paying close attention to a child distracts the driver from the important tasks of driving, placing both of you at risk.

If a child requires close physical attention or frequent visual contact, we strongly recommend that another adult ride with the child in a back seat. The back seat is far safer for a child than the front.
Protecting Children — General Guidelines

**Additional Safety Precautions**

- **Never hold an infant or child on your lap.** If you are not wearing a seat belt in a crash, you could be thrown forward and crush the child against the dashboard or a seat-back. If you are wearing a seat belt, the child can be torn from your arms and be seriously hurt or killed.

- **Never put a seat belt over yourself and a child.** During a crash, the belt could press deep into the child and cause serious or fatal injuries.

- **Never let two children use the same seat belt.** If they do, they could be very seriously injured in a crash.

- **Make sure any unused seat belt that a child can reach is buckled, the lockable retractor is activated, and the belt is fully retracted and locked.** If a child wraps a loose seat belt around their neck, they can be seriously or fatally injured. (See pages 45 and 46 for how to activate and deactivate the lockable retractor.)

- **Use the childproof door locks to prevent children from opening the rear doors.** This can prevent children from accidentally falling out (see page 79).

- **Do not leave children alone in a vehicle.** Leaving children without adult supervision is illegal in most states and Canadian provinces, and can be very hazardous.

- **Lock all doors and the tailgate when your vehicle is not in use.** Children who play in vehicles can accidentally get trapped inside. Teach your children not to play in or around vehicles.

- **Keep vehicle keys/remote transmitters out of the reach of children.** Even very young children learn how to unlock vehicle doors, turn on the ignition switch, and open the tailgate, which can lead to accidental injury or death.

For example, infants and small children left in a vehicle on a hot day can die from heatstroke. A child left alone with the key in the ignition switch can accidentally set the vehicle in motion, possibly injuring themselves or others.
Protecting Infants and Small Children

Protecting Infants

Two types of seats may be used: a seat designed exclusively for infants, or a convertible seat used in the rear-facing, reclining mode.

Do not put a rear-facing child seat in a forward-facing position. If placed facing forward, an infant could be very seriously injured during a frontal collision.

Child Seat Placement

A rear-facing child seat can be placed in any seating position in the back seat, but not in the front. Never put a rear-facing child seat in the front seat.

If the passenger’s front airbag inflates, it can hit the back of the child seat with enough force to kill or seriously injure an infant.

When properly installed, a rear-facing child seat may prevent the driver or a front passenger from moving their seat as far back as recommended, or from locking their seat-back in the desired position.

Or, it can interfere with proper operation of the passenger’s advanced front airbag system.

CONTINUED

Child Seat Type

An infant must be properly restrained in a rear-facing, reclining child seat until the child reaches the seat maker’s weight or height limit for the seat, and the child is at least one year old.

Only a rear-facing child seat provides proper support for a baby’s head, neck, and back.

Do not put a rear-facing child seat in a forward-facing position. If placed facing forward, an infant could be very seriously injured during a frontal collision.

CONTINUED

CONTINUED
In any of these situations, we strongly recommend that you install the child seat directly behind the front passenger’s seat, move the seat as far forward as needed, and leave it unoccupied. Or, you may wish to get a smaller rear-facing child seat.

**WARNING**

Placing a rear-facing child seat in the front seat can result in serious injury or death during a collision.

Always place a rear-facing child seat in the back seat, not the front.

We also recommend that a small child use the child seat until the child reaches the weight or height limit for the seat.

**Child Seat Placement**

We strongly recommend placing a forward-facing child seat in a back seat, not the front.

**Placing a forward-facing child seat in the front seat of a vehicle equipped with a passenger’s airbag can be hazardous.** If the vehicle seat is too far forward, or the child’s head is thrown forward during a collision, an inflating airbag can strike the child with enough force to cause very serious or fatal injuries.

**Protecting Small Children**

A child who is at least one year old, and who fits within the child seat maker’s weight and height limits, should be restrained in a forward-facing, upright child seat.

Of the different seats available, we recommend those that have a five-point harness system as shown.
Protecting Infants and Small Children, Selecting a Child Seat

Even with advanced front airbags that automatically turn the passenger’s front airbag off (see page 31 ), a back seat is the safest place for a small child.

If it is necessary to put a forward-facing child seat in the front, move the vehicle seat as far to the rear as possible, and be sure the child seat is firmly secured to the vehicle and the child is properly strapped in the seat.

**WARNING**

Placing a forward-facing child seat in the front seat can result in serious injury or death if the front airbag inflates.

If you must place a forward-facing child seat in front, move the vehicle seat as far back as possible, and properly restrain the child.

Selecting a Child Seat

When buying a child seat, you need to choose either a conventional child seat, or one designed for use with the lower anchors and tethers for children (LATCH) system.

Conventional child seats must be secured to a vehicle with a seat belt, whereas LATCH-compatible seats are secured by attaching the seat to hardware built into the two outer seating positions in the back seat.

Since LATCH-compatible child seats are easier to install and reduce the possibility of improper installation, we recommend selecting this style.

We also recommend selecting a LATCH-compatible seat with a rigid, rather than a flexible, anchor (see page 43 ).

In seating positions and vehicles not equipped with LATCH, a LATCH-compatible child seat can be installed using a seat belt.

Whatever type of seat you choose, to provide proper protection, a child seat should meet three requirements:

1. **The child seat should meet U.S. or Canadian Motor Vehicle Safety Standard 213.** Look for FMVSS 213 or CMVSS 213 on the box.

2. **The child seat should be of the proper type and size to fit the child.** Rear-facing for infants, forward-facing for small children.

CONTINUED
After selecting a proper child seat and a good place to install the seat, there are three main steps in installing the seat:

1. **Properly secure the child seat to the vehicle.** All child seats must be secured to the vehicle with the lap part of a lap/shoulder belt or with the LATCH (lower anchors and tethers for children) system. A child whose seat is not properly secured to the vehicle can be endangered in a crash.

2. **Make sure the child seat is firmly secured.** After installing a child seat, push and pull the seat forward and from side-to-side to verify that it is secure.

A child seat secured with a seat belt should be installed as firmly as possible. However, it does not need to be “rock solid.” Some side-to-side movement can be expected and should not reduce the child seat’s effectiveness.

If the child seat is not secure, try installing it in a different seating position, or use a different style of child seat that can be firmly secured.

3. **Secure the child in the child seat.** Make sure the child is properly strapped in the child seat according to the child seat maker’s instructions. A child who is not properly secured in a child seat can be seriously injured in a crash.

The following pages provide guidelines on how to properly install a child seat. A forward-facing child seat is used in all examples, but the instructions are the same for rear-facing child seats.
Installing a Child Seat

Installing a Child Seat with LATCH
Your vehicle is equipped with LATCH (lower anchors and tethers for children) at the outer rear seats.

The lower anchors are located between the seat-back and seat bottom, and are to be used only with a child seat designed for use with LATCH.

The location of each lower anchor is indicated by a small button above the anchor point.

To install a LATCH-compatible child seat:

1. Move the seat belt buckle or tongue away from the lower anchors.

2. Make sure there are no objects near the anchors that could prevent a secure connection between the child seat and the anchors.

3. Place the child seat on the vehicle seat, then attach the seat to the lower anchors according to the child seat maker’s instructions.

Some LATCH-compatible seats have a rigid-type connector as shown above.

CONTINUED
Whatever type you have, follow the child seat maker’s instructions for adjusting or tightening the fit.

Other LATCH-compatible seats have a flexible-type connector as shown above.

4. Whatever type you have, follow the child seat maker’s instructions for adjusting or tightening the fit.

5. Route the tether strap over the seat-back and through the head restraint legs.

6. Attach the tether strap hook to the anchor, making sure the strap is not twisted.

7. Tighten the strap according to the seat maker’s instructions.

8. Push and pull the child seat forward and from side-to-side to verify that it is secure.
Installing a Child Seat with a Lap/Shoulder Belt

When not using the LATCH system, all child seats must be secured to the vehicle with the lap part of a lap/shoulder belt.

In addition, the lap/shoulder belts in all seating positions except the driver’s have a locking mechanism that must be activated to secure a child seat.

If you intend to install a child seat in the center seating position of the rear seat, remove its head restraint, and make sure the detachable seat belt is securely latched (see page 92).

1. With the child seat in the desired seating position, route the belt through the child seat according to the seat maker’s instructions, then insert the latch plate into the buckle.

2. To activate the lockable retractor, slowly pull the shoulder part of the belt all the way out until it stops, then let the belt feed back into the retractor.

3. After the belt has retracted, tug on it. If the belt is locked, you will not be able to pull it out. If you can pull the belt out, it is not locked, and you will need to repeat these steps.

CONTINUED
Installing a Child Seat

4. After confirming that the belt is locked, grab the shoulder part of the belt near the buckle, and pull up to remove any slack from the lap part of the belt. Remember, if the lap part of the belt is not tight, the child seat will not be secure.

To remove slack, it may help to put weight on the child seat, or push on the back of the seat while pulling up on the belt.

5. Push and pull the child seat forward and from side-to-side to verify that it is secure enough to stay upright during normal driving maneuvers. If the child seat is not secure, unlatch the belt, allow it to retract fully, then repeat these steps.

To deactivate the locking mechanism and remove a child seat, unlatch the buckle, unroute the seat belt, and let the belt fully retract.
Installing a Child Seat with a Tether
A child seat with a tether can be installed in any seating position in the back seat.

Each rear outside seating position has an anchorage point on the seat-back, and the center seating position has an anchorage point in the ceiling near the tailgate.

Since a tether can provide additional security to the lap/shoulder belt installation, we recommend using a tether whenever one is required or available.

Using an Outer Anchor

1. After properly securing the child seat (see page 45), route the tether strap over the seat-back and through the head restraint legs.

2. Attach the tether strap hook to the anchor, making sure the tether strap is not twisted.

3. Tighten the strap according to the seat maker’s instructions.
Installing a Child Seat

**Using the Center Anchor**

1. Remove the rear center head restraint, and store it in a safe place.

2. After properly securing the child seat (see page 45), open the anchor cover.

3. Route the tether strap over the seat-back, then attach the tether strap hook to the anchor, making sure the tether strap is not twisted.

4. Tighten the strap according to the seat maker’s instructions.
When a child reaches the recommended weight or height limit for a forward-facing child seat, the child should sit in a back seat on a booster seat and wear a lap/shoulder belt.

The following pages give instructions on how to check proper seat belt fit, what kind of booster seat to use if one is needed, and important precautions for a child who must sit in front.

**WARNING**

Allowing a child age 12 or under to sit in front can result in injury or death if the passenger’s front airbag inflates.

If a child must ride in front, move the vehicle seat as far back as possible, use a booster seat if needed, have the child sit up properly and wear the seat belt properly.

To determine if a lap/shoulder belt properly fits a child, have the child put on the seat belt, then ask yourself:

1. Does the child sit all the way back against the seat?
2. Do the child’s knees bend comfortably over the edge of the seat?

CONTINUED
3. Does the shoulder belt cross between the child’s neck and arm?

4. Is the lap part of the belt as low as possible, touching the child’s thighs?

5. Will the child be able to stay seated like this for the whole trip?

If you answer yes to all these questions, the child is ready to wear the lap/shoulder belt correctly. If you answer no to any question, the child needs to ride on a booster seat.

**Using a Booster Seat**

A child who has outgrown a forward-facing child seat should ride in a back seat and use a booster seat until the lap/shoulder belt fits them properly without the booster.

Some states and Canadian provinces also require children to use a booster seat until they reach a given age or weight (e.g., 6 years or 60 lbs). Be sure to check current laws in the states or provinces where you intend to drive.

Booster seats can be high-back or low-back. Whichever style you select, make sure the booster seat meets federal safety standards (see page 35) and that you follow the booster seat maker’s instructions.
If a child who uses a booster seat must ride in front, move the vehicle seat as far back as possible and be sure the child is wearing the seat belt properly.

A child may continue using a booster seat until the tops of their ears are even with the top of the vehicle’s or booster’s seat-back. A child of this height should be tall enough to use the lap/shoulder belt without a booster seat.

### When Can a Larger Child Sit in Front

The National Highway Traffic Safety Administration and Transport Canada recommend that all children age 12 and under be properly restrained in a back seat.

If the passenger’s front airbag inflates in a moderate to severe frontal collision, the airbag can cause serious injuries to a child who is unrestrained, improperly restrained, sitting too close to the airbag, or out of position.

A side airbag also poses risks. If any part of a larger child’s body is in the path of a deploying side airbag, the child could receive possibly serious injuries.

Of course, children vary widely. And while age may be one indicator of when a child can safely ride in front, there are other important factors you should consider.

#### Physical Size

Physically, a child must be large enough for the lap/shoulder belt to properly fit (see pages 14 and 49). If the seat belt does not fit properly, with or without the child sitting on a booster seat, the child should not sit in front.

#### Maturity

To safely ride in front, a child must be able to follow the rules, including sitting properly, and wearing the seat belt properly throughout a ride.

---

CONTINUED
If you decide that a child can safely ride up front, be sure to:

- Carefully read the owner’s manual, and make sure you understand all seat belt instructions and all safety information.
- Move the vehicle seat to the rear-most position.
- Have the child sit up straight, back against the seat, and feet on or near the floor.
- Check that the child’s seat belt is properly and securely positioned.
- Supervise the child. Even a mature child sometimes needs to be reminded to fasten the seat belt or sit properly.

Additional Safety Precautions
- **Do not let a child wear a seat belt across the neck.** This could result in serious neck injuries during a crash.
- **Do not let a child put the shoulder part of a seat belt behind the back or under the arm.** This could cause very serious injuries during a crash. It also increases the chance that the child will slide under the belt in a crash and be injured.
- **Two children should never use the same seat belt.** If they do, they could be very seriously injured in a crash.
- **Do not put any accessories on a seat belt.** Devices intended to improve a child’s comfort or reposition the shoulder part of a seat belt can make the belt less effective and increase the chance of serious injury in a crash.
Your vehicle’s exhaust system contains carbon monoxide gas. Carbon monoxide should not enter the vehicle in normal driving if you maintain your vehicle properly and follow the information on this page.

Have the exhaust system inspected for leaks whenever:

- The vehicle is raised for an oil change.
- You notice a change in the sound of the exhaust.
- The vehicle was in an accident that may have damaged the underside.

**WARNING**

Carbon monoxide gas is toxic. Breathing it can cause unconsciousness and even kill you.

Avoid any enclosed areas or activities that expose you to carbon monoxide.

High levels of carbon monoxide can collect rapidly in enclosed areas, such as a garage. Do not run the engine with the garage door closed. Even with the door open, run the engine only long enough to move the vehicle out of the garage.

With the tailgate open, airflow can pull exhaust gas into your vehicle’s interior and create a hazardous condition. If you must drive with the tailgate open, open all the windows and set the heating and cooling system as shown below.

If you must sit in your parked vehicle with the engine running, even in an unconfined area, adjust the heating and cooling system as follows:

1. Select the fresh air mode.
2. Select the ⏳️ mode.
3. Turn the fan on high speed.
4. Set the temperature control to a comfortable setting.
These labels are in the locations shown. They warn you of potential hazards that could cause serious injury or death. Read these labels carefully.

If a label comes off or becomes hard to read (except for the U.S. dashboard label which may be removed by the owner), contact your dealer for a replacement.

**DASHBOARD**

**U.S. models only**

This Vehicle is Equipped with Advanced Air Bags

Children can be killed or seriously injured by the air bag. The back seat is the safest place for children.

Never put a rear-facing child seat in the front.

Always use seat belts and child restraints.

See owner's manual for more information about air bags.

To be removed by owner only.

SIDE AIRBAG

- This car is equipped with side airbags in the front seats and side curtain airbags.
- Do not lean against the door.
- See owner's manual for more information.

SIDE AIRBAG

- Ce véhicule est équipé de airbags latéraux à l'avant.
- Ne pas se pencher contre la portière.
- Consultez le manuel du propriétaire pour plus d'informations.
This section gives information about the controls and displays that contribute to the daily operation of your vehicle. All the essential controls are within easy reach.

Instrument Panel Indicators

<table>
<thead>
<tr>
<th>Indicator</th>
<th>U.S.</th>
<th>Canada</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Malfunction Indicator Lamp</strong></td>
<td>This indicator comes on when you turn the ignition switch to the ON (II) position. It reminds you and your passengers to fasten your seat belts. A beeper also sounds if you have not fastened your seat belt.</td>
<td></td>
</tr>
<tr>
<td><strong>Low Oil Pressure Indicator</strong></td>
<td>The engine can be severely damaged if this indicator flashes or stays on when the engine is running. For more information, see page 218.</td>
<td></td>
</tr>
<tr>
<td><strong>Charging System Indicator</strong></td>
<td>If this indicator comes on when the engine is running, the battery is not being charged. For more information, see page 218.</td>
<td></td>
</tr>
<tr>
<td><strong>Parking Brake and Brake System Indicator</strong></td>
<td>1. It comes on when you turn the ignition switch to the ON (II) position. It is a reminder to check the parking brake. A beeper sounds if you drive with the parking brake not fully released. Driving with the parking brake not fully released can damage the brakes and tires.</td>
<td></td>
</tr>
<tr>
<td></td>
<td>2. If it stays on after you have fully released the parking brake while the engine is running, or if it comes on while driving, there could be a problem with the brake system. For more information, see page 220.</td>
<td></td>
</tr>
</tbody>
</table>

If you turn the ignition switch to the ON (II) position before fastening your seat belts, the beeper sounds, and the indicator flashes. If you do not fasten your seat belts before the beeper stops, the indicator stops flashing but remains on.
If your front passenger does not fasten their seat belt, the indicator comes on about 6 seconds after the ignition switch is turned to the ON (II) position.

If either of you do not fasten your seat belt while driving, the beeper will sound and the indicator will flash again at regular intervals. For more information, see page 18.

Supplemental Restraint System Indicator
This indicator comes on briefly when you turn the ignition switch to the ON (II) position. If it comes on at any other time, it indicates a potential problem with your front airbags. This indicator will also alert you to a potential problem with your side airbags, passenger’s side airbag automatic cutoff system, side curtain airbags, automatic seat belt tensioners, driver’s seat position sensor, or the front passenger’s weight sensors. For more information, see page 30.

Side Airbag Off Indicator
This indicator comes on when you turn the ignition switch to the ON (II) position. If it comes on at any other time, it indicates that the passenger’s side airbag has automatically shut off. For more information, see page 31.
Instrument Panel Indicators

**Anti-lock Brake System (ABS) Indicator**
This indicator normally comes on for a few seconds when you turn the ignition switch to the ON (II) position. If it comes on at any other time, there is a problem with the ABS. If this happens, have your vehicle checked at a dealer. With this indicator on, your vehicle still has normal braking ability but no anti-lock function. For more information, see page 162.

**Electric Power Steering (EPS) Indicator**
This indicator normally comes on when you turn the ignition to the ON (II) position and goes off after the engine starts. If it comes on at any other time, there is a problem in the electric power steering system. If this happens, stop the vehicle in a safe place and turn off the engine. Reset the system by restarting the engine. The indicator will not turn off immediately. If it does not go off after driving a short distance, or comes on again while driving, take the vehicle to your dealer to have it checked. With the indicator on, the EPS may be turned off, making the vehicle harder to steer.

If the power steering system overheats while driving, the assist is reduced and steering may feel slightly harder.

Driving with the power steering system continuously overheating can cause system damage.

**Low Fuel Indicator**
This indicator comes on as a reminder that you must refuel soon.

When the indicator comes on, there is about 1.7 US gal (6.3 l) of fuel remaining in the tank before the needle reaches E. There is a small reserve of fuel remaining in the tank when the needle does reach E.

**Door and Tailgate Open Indicator**
This indicator comes on if any door or the tailgate is not closed tightly.
High Temperature Indicator
This indicator monitors the temperature of the engine coolant. It normally comes on when you turn the ignition switch to the ON (II) position and goes off after a few seconds. In normal driving conditions, this indicator should not blink or stay on. In severe driving conditions, such as very hot weather or a long period of uphill driving, this indicator may blink. This means the engine coolant temperature is high. If the indicator begins to blink while you are driving, be sure to slow down to prevent overheating. If the indicator stays on, pull safely to the side of the road and turn off the engine. See page 216 for instructions and precautions on checking the engine’s cooling system. Do not drive the vehicle while the indicator is on or the engine may be damaged.

Low Temperature Indicator
This indicator monitors the temperature of the engine coolant. If there is no problem, this indicator comes on when the engine is cold. If it comes on when the engine is warm (normal operating temperature), have the vehicle inspected by your dealer as soon as possible.

Turn Signal and Hazard Warning Indicators
The left or right turn signal indicator blinks when you signal a lane change or turn. If an indicator does not blink or blinks rapidly, it usually means one of the turn signal bulbs is burned out (see page 188). Replace the bulb as soon as possible, since other drivers cannot see that you are signaling.

When you press the hazard warning button, both turn signal indicators and all turn signals on the outside of the vehicle flash.
Instrument Panel Indicators

**Lights On Indicator**
This indicator reminds you that the exterior lights are on. It comes on when the light switch is in either the ON or LOCK position. If you turn the ignition switch to the ACCESSORY (I) or LOCK (0) position without turning off the light switch, this indicator will stay on. A reminder chime will also sound when you open the driver’s door.

**High Beam Indicator**
This indicator comes on with the high beam headlights. For more information, see page 72.

On Canadian models, this indicator comes on with reduced brightness when the daytime running lights (DRL) are on (see page 72).

**Daytime Running Lights Indicator**
*Canadian models only*
If this indicator comes on when the ignition switch is turned to the ON (II) position and the parking brake is released, it means there is a problem in a circuit. Have your vehicle checked by your dealer.

**Fog Light Indicator**
*On Sport model*
This indicator comes on when you turn on the fog lights. For more information, see page 72.

**Cruise Main Indicator**
*On Sport model*
This indicator comes on when you turn on the cruise control system by pressing the CRUISE button (see page 127).

**Cruise Control Indicator**
*On Sport model*
This indicator comes on when you set the cruise control. See page 127 for information on operating the cruise control.

**Washer Level Indicator**
*Canadian models only*
This indicator comes on when the washer fluid level is low. Add washer fluid when you see this indicator come on (see page 182).
Instrument Panel Indicators

Maintenance Minder Indicator
This indicator comes on for a few seconds when you turn the ignition switch to the ON (II) position. This indicator reminds you that it is time to take your vehicle in for scheduled maintenance. The maintenance main items and sub items will be displayed in the information display. See page 167 for more information on the maintenance minder.

This indicator goes off when your dealer resets it after completing the required maintenance service.

Immobilizer System Indicator
This indicator comes on for a few seconds when you turn the ignition switch to the ON (II) position. It will go off if you have inserted a properly-coded ignition key. If it is not a properly-coded key, the indicator will blink and the engine will not start (see page 76).

This indicator also blinks several times when you turn the ignition switch from the ON (II) position to the ACCESSORY (I) or LOCK (0) position.

Security System Indicator
This indicator comes on when the security system is set. On Sport model See page 126 for more information on the security system.
This meter shows the number of miles (U.S.) or kilometers (Canada) driven since you last reset it.

There are two trip meters: Trip A and Trip B. Switch between these displays by pressing the Select/Reset knob repeatedly.

Each trip meter works independently, so you can keep track of two different distances.

When you turn the ignition switch to the ON (II) position, the meter you last selected is displayed.

To reset a trip meter, display it, and then press and hold the Select/Reset knob until the number resets to “0.0”.

Trip Meter
**Odometer**
The odometer shows the total distance your vehicle has been driven. It measures miles in U.S. models and kilometers in Canadian models. It is illegal under U.S. federal law and Canadian provincial regulations to disconnect, reset, or alter the odometer with the intent to change the number of miles or kilometers indicated.

**Fuel Gauge**
This shows how much fuel you have. It may show slightly more or less than the actual amount. The needle returns to the bottom after you turn off the ignition.

**Notice**
Avoid driving with an extremely low fuel level. Running out of fuel could cause the engine to misfire, damaging the catalytic converter.

**Check Fuel Cap Indicator**
If your fuel fill cap is loose or missing, a “CHECK FUEL CAP” message appears as text in the information display after you start the engine. The message appears from CHECK to FUEL, then to CAP repeatedly.

Turn the engine off and confirm the fuel fill cap is installed. If it is, loosen the cap, then retighten it until it clicks at least once. You can cycle the message off of the display by pressing the Select/Reset knob repeatedly, but this message will be displayed each time the engine is started. It will take several days of normal driving for the vehicle to turn the warning off.

If the system still detects a loose or missing fuel fill cap, the malfunction indicator lamp (MIL) comes on. Turn the engine off, and check or retighten the fuel fill cap until it clicks at least once. The MIL goes out after several days of normal driving once the cap is tightened or replaced. If it does not go out, have your dealer inspect the vehicle. For more information, see page 219.
Maintenance Minder
The information display in the instrument panel shows you the engine oil life and maintenance service items when the ignition switch is in the ON (II) position. This information helps to keep you aware of the periodic maintenance your vehicle needs for continued trouble-free driving. Refer to page 167 for more information.
To use the horn, press the center pad of the steering wheel.

*1: To use the horn, press the center pad of the steering wheel.
*2: If equipped.
Windshield Wipers and Washers

Windshield Wiper

Push the right lever up or down to select a position.

1. MIST
2. OFF
3. INT — Intermittent
4. LO — Low speed
5. HI — High speed
6. Windshield washers

MIST — The wipers run at high speed until you release the lever.

OFF — The wipers are not activated.

INT — The wipers operate every few seconds.

LO — The wipers run at low speed.

HI — The wipers run at high speed.

Windshield Washers — Pull the wiper control lever toward you, and hold it. The washers spray until you release the lever. The wipers run at low speed, then complete one more sweep after you release the lever.

Rear Window Wiper and Washer

1. OFF
   When you turn the wiper switch to the “OFF” position, the wiper will return to its parked position.

2. Rotate the switch clockwise to turn the rear window wiper ON.
3. Hold past ON to turn the rear window wiper on and to spray the rear window washer.

4. Rotate the switch counterclockwise to spray the window washer.

The rear window washer uses the same fluid reservoir as the windshield washer.

**Turn Signal and Headlights**

1. Turn signal
2. Off
3. Parking and interior lights
4. Headlights
5. High beams
6. Flash high beams

*On Sport model*
7. Fog lights off
8. Fog lights on

**Turn Signal** — Push down on the left lever to signal a left turn and up to signal a right turn. To signal a lane change, push lightly on the lever and hold it. The lever will return to the center when you release it or complete a turn.

CONTINUED
Headlights

Turning the switch to the "" position turns on the parking lights, taillights, instrument panel lights, side-marker lights, and rear license plate lights.

Turning the switch to the "" position turns on the headlights.

When the light switch is in the "" or "" position, the lights on indicator comes on as a reminder. This indicator stays on if you leave the light switch on and turn the ignition switch to the ACCESSORY (I) or the LOCK (0) position.

If you leave the lights on with the key removed from the ignition switch, you will hear a reminder chime when you open the driver's door.

To flash the high beams, pull the lever back lightly, then release it. The high beams will stay on as long as you hold the lever back.

High Beams — Push the lever forward and the high beam indicator will come on (see page 64). Pull it back to return to low beams.

Fog Lights
On Sport model
Turn the fog lights on and off by turning the switch next to the headlight switch.

You can use the fog lights only when the headlights are on low beam. They will go off when the headlights are turned off.

Daytime Running Lights
Canadian models only
With the headlight switch off or in the "" position, the high beam headlights and the high beam indicator come on with reduced brightness when you turn the ignition switch to the ON (II) position and release the parking brake. They remain on until you turn the ignition switch off, even if you set the parking brake.

The headlights revert to normal operation when you turn them on with the switch.
CONTINUED

Instruments and Controls

Instrument Panel Brightness, Hazard Warning Button, Rear Window Defogger

Instrument Panel Brightness

You can change the instrument panel brightness only when the light switch is on. Turn the knob on the upper part of the instrument panel to adjust the brightness.

You will hear a beep when maximum or minimum brightness is reached. You will also hear a beep when the maximum level is canceled by turning the knob a click to the left.

Hazard Warning Button

Push the button to turn on the hazard warning lights (four-way flashers). This causes all four outside turn signals and both turn indicators in the instrument panel to flash. Use the hazard warning lights if you need to park in a dangerous area near heavy traffic, or if your vehicle is disabled.

Rear Window Defogger

The rear window defogger will clear fog, frost, and thin ice from the window. Push the defogger button to turn it on and off. The indicator in the button comes on to show the defogger is on. You must manually shut off the rear window defogger when it is no longer needed.
Make sure the rear window is clear and you have good visibility before starting to drive.

The defogger wires on the inside of the rear window can be accidentally damaged. When cleaning the glass, always wipe side-to-side.

**Steering Wheel Adjustment**

Make any steering wheel adjustment before you start driving.

**WARNING**

Adjusting the steering wheel position while driving may cause you to lose control of the vehicle and be seriously injured in a crash.

Adjust the steering wheel only when the vehicle is stopped.

1. Push the lever under the steering column all the way down.

2. Move the steering wheel so it points toward your chest, not toward your face. Make sure you can see the instrument panel gauges and indicators.

3. Push the lever up to lock the steering wheel in position.

4. Make sure you have securely locked the steering wheel in place by trying to move it up and down.
You should have received a key number tag with your keys. You will need this key number if you ever have to get a lost key replaced. Use only Honda-approved key blanks.

These keys contain electronic circuits that are activated by the immobilizer system. They will not work to start the engine if the circuits are damaged.

- Protect the keys from direct sunlight, high temperature, and high humidity.
- Do not drop the keys or set heavy objects on them.
- Keep the keys away from liquids. If they get wet, dry them immediately with a soft cloth.

*All models except Sport*
The keys do not contain batteries. Do not try to take them apart.
Immobilizer System

The immobilizer system protects your vehicle from theft. If an improperly-coded key (or other device) is used, the engine’s fuel system is disabled.

When you turn the ignition switch to the ON (II) position, the immobilizer system indicator should come on for a few seconds, then go off. If the indicator starts to blink, it means the system does not recognize the coding of the key. Turn the ignition switch to the LOCK (0) position, remove the key, reinsert it, and turn the ignition switch to the ON (II) position again.

The system may not recognize your key’s coding if another immobilizer key or other metal object (i.e. key fob) is near the ignition switch when you insert the key.

If the system repeatedly does not recognize the coding of your key, contact your dealer.

Do not attempt to alter this system or add other devices to it. Electrical problems could result that may make your vehicle undrivable.

If you have lost your key and cannot start the engine, contact your dealer.

As required by the FCC:
This device complies with Part 15 of the FCC rules. Operation is subject to the following two conditions: (1) This device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

Changes or modifications not expressly approved by the party responsible for compliance could void the user’s authority to operate the equipment.

This device complies with Industry Canada Standard RSS-210. Operation is subject to the following two conditions: (1) this device may not cause interference, and (2) this device must accept any interference that may cause undesired operation of the device.
The ignition switch has four positions: LOCK (0), ACCESSORY (I), ON (II), and START (III).

**LOCK (0)** — You can insert or remove the key only in this position. To turn the key, push it in slightly. If your vehicle has an automatic transmission, the shift lever must also be in park.

**ACCESSORY (I)** — You can operate the audio system and the accessory power socket in this position.

**ON (II)** — This is the normal key position when driving. Several of the indicators on the instrument panel come on as a test when you turn the ignition switch from the ACCESSORY (I) to the ON (II) position.

**START (III)** — Use this position only to start the engine. The switch returns to the ON (II) position when you let go of the key.

If the front wheels are turned, the anti-theft lock may make it difficult to turn the key. Firmly turn the steering wheel to the left or right as you turn the key.

You will hear a reminder beeper if you leave the key in the LOCK (0) or the ACCESSORY (I) position and open the driver's door. Remove the key to turn off the beeper.

If your vehicle has an automatic transmission, the shift lever must be in Park before you can remove the key from the ignition switch.

You will hear a reminder beeper if you leave the key in the LOCK (0) or the ACCESSORY (I) position and open the driver's door. Remove the key to turn off the beeper.

**WARNING**

Removing the key from the ignition switch while driving locks the steering. This can cause you to lose control of the vehicle.

Remove the key from the ignition switch only when parked.
Door Locks

Each door has a lock tab on the top of the door. Push in the tab to lock the door, and pull it out to unlock.

On Canadian DX model
To lock the passenger’s door when getting out of the vehicle, push in the lock tab and close the door. To lock the driver’s door, pull and hold the outside door handle, then push in the lock tab. Release the handle, then close the door.

All models except Sport
Each front door can be locked or unlocked with the ignition key.

Power Door Locks

All models except Canadian DX
To lock the doors and the tailgate, push the top of the master door lock switch on the driver’s door, push in the lock tab on the driver’s door, or use the key in the outside door lock on the driver’s door.

Pushing the bottom of the master door lock switch unlocks all doors and the tailgate.
The lock tab on each passenger’s door locks and unlocks only that door. Pulling up the driver’s lock tab only unlocks the driver’s door. To unlock only the driver’s door from the outside, turn the key and release it. If you turn it again, the remaining doors and the tailgate unlock.

To lock a passenger’s door when getting out of the vehicle, push in the lock tab and close the door. To lock the driver’s door, remove key from ignition switch and push in the lock tab or push the top of the master door lock switch, then close the door.

**Lockout Prevention**

With the driver’s door open and the key in the ignition switch, the master door lock switch is disabled. It is not disabled if the driver’s door is closed. If you try to lock the open driver’s door with the key in the ignition switch by pushing in the lock tab, the tabs on all doors pop up when you close the door.

**Childproof Door Locks**

The childproof door locks are designed to prevent children seated in the rear from accidentally opening the rear doors. Each rear door has a lock lever near the edge. With the lever in the LOCK position, the door cannot be opened from inside regardless of the position of the lock tab. To open the door, pull the lock tab up, and use the outside door handle.
The tailgate will lock or unlock when you lock or unlock the driver’s door by using the key, the lock tab on the driver’s door, the master door lock switch or the remote transmitter (if equipped).

All models except Canadian DX

The tailgate will lock or unlock when you lock or unlock the driver’s door by using the key, the lock tab on the driver’s door, the master door lock switch or the remote transmitter (if equipped).

All models except Sport

You can lock or unlock the tailgate with the key.

To open the tailgate, pull the handle, then lift up.
To close the tailgate, hold the tailgate handle, lower the tailgate, then press down on the back edge.

Keep the tailgate closed at all times while driving to avoid damaging the tailgate and to prevent exhaust gas from getting into the interior. See Carbon Monoxide Hazard on page 53.

Unlocking the Tailgate

**On Sport model**
If the power door lock system cannot unlock the tailgate, unlock it manually.

Use a small flat-tip screwdriver to remove the cover on the back of the tailgate.

Push the release lever to the right as shown.

If you need to unlock the tailgate manually, it means there is a problem with the tailgate. Have the vehicle checked by your dealer.
Remote Transmitter

**UNLOCK** — Press this button once to unlock the driver’s door. Push it twice to unlock the remaining doors and the tailgate. Some exterior lights will flash twice each time you press the button.

The ceiling light (if the ceiling light switch is in the door activated position) will come on when you press the UNLOCK button. If you do not open any door or the tailgate within 30 seconds, the light fades out. If you relock the doors and the tailgate with the remote transmitter before 30 seconds have elapsed, the light will go off immediately.

If you do not open any door or the tailgate within 30 seconds, they will automatically relock and the security system will set.

**PANIC** — Press this button for about 2 seconds to attract attention: the horn will sound, and the exterior lights will flash for about 30 seconds. To cancel panic mode, press any other button on the remote transmitter, or turn the ignition switch to the ON (II) position.

**LOCK** — Press this button once to lock all doors and the tailgate. Some exterior lights will flash once. When you push LOCK twice within 5 seconds, the horn will sound to verify that the doors and the tailgate are locked and the security system has set. You cannot lock the doors and the tailgate if any door or the tailgate is not fully closed or the key is in the ignition switch.

*On Sport model*

82
Remote Transmitter Care

- Avoid dropping or throwing the transmitter.
- Protect the transmitter from extreme temperature.
- Do not immerse the transmitter in any liquid.
- If you lose a transmitter, the replacement needs to be reprogrammed by your dealer.

Replacing the Transmitter Battery

If it takes several pushes on the button to lock or unlock the doors and the tailgate, replace the battery as soon as possible.

Battery type: CR1616

To replace the battery:

1. Remove the screw at the base of the transmitter with a small Phillips-head screwdriver.

2. Separate the transmitter by prying its middle seam with your fingernail.

3. Inside the transmitter, separate the inner cover from the keypad by releasing the two tabs on the cover.

CONTINUED
4. Remove the old battery, and insert a new battery into the back of the cover with the + side facing down. An improperly disposed of battery can hurt the environment. Always confirm local regulations for battery disposal.

5. Install the parts in reverse order.

As required by the FCC:
This device complies with Part 15 of the FCC rules. Operation is subject to the following two conditions: (1) This device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

Changes or modifications not expressly approved by the party responsible for compliance could void the user’s authority to operate the equipment.

This device complies with Industry Canada Standard RSS-210. Operation is subject to the following two conditions: (1) this device may not cause interference, and (2) this device must accept any interference that may cause undesired operation of the device.
Front Seat Adjustments

See pages 11 – 13 for important safety information and warnings about how to properly position the seats and seatbacks.

Make all seat adjustments before you start driving.

To adjust the seat forward and backward, pull up on the lever under the seat cushion’s front edge. Move the seat to the desired position, and release the lever. Try to move the seat to make sure it is locked in position.

The seat can also be adjusted forward and backward using the lever on the side of the seat-back. Pull out the lever and push it forward, holding the seat-back with your hand. Move the seat to the desired position, and check the seat to make sure it is locked in position.
To change the seat-back angle of the front seat, pull up the lever on the outside of the seat bottom.

Once your seat is adjusted correctly, rock it back and forth to make sure it is locked in position.

Rear Seat Adjustments

You can adjust the angle of the rear seat-backs separately. To change the seat-back angle, pull up the release lever on the outer side of the seat-back.

Head Restraints

See page 13 for important safety information and a warning about how to properly position the head restraints.

Your vehicle is equipped with head restraints in all seating positions to help protect you and your passengers from whiplash and other injuries.

They are most effective when you adjust them so the back of the occupant’s head rests against the center of the restraint.
The head restraints in the rear outer seating positions do not adjust for height. To remove one for cleaning or repair, push the release button, and lift the restraint up.

Make sure the head restraint locks in position when you reinstall it.

The front head restraints adjust for height. You need both hands to adjust a restraint. Do not attempt to adjust it while driving. To raise it, pull upward. To lower the restraint, push the release button sideways, and push the restraint down.

When a passenger is seated in the rear center seating position, make sure the center head restraint is in its highest position.

The head restraints in the rear outer seating positions do not adjust for height. To remove one for cleaning or repair, push the release button, and lift the restraint up.
Reclining the Front Seats

You can recline the seat-backs on the front seats so they are level with the rear seat cushions, making a large cushioned area. To do this:

1. Recline the rear seat-backs as far backward as possible (see page 86).

2. Remove the front head restraints (see page 87), and store them securely.

3. Using the slide lever, move the front seat cushions as far forward as possible.

4. Pull up the seat-back angle adjustment lever, and pivot the seat-back backward until it is level with the rear seat cushion.

Reverse this procedure to return the front seats to the upright position.

When you return the seat-back to its upright position, hold the seat-back to keep it from going up too quickly.

Make sure you install the head restraints and securely lock the seats before driving.
Folding the Rear Seat Up
The left and right rear seat cushions can be lifted up separately to make room for cargo.

Remove any items from the seat before you fold up the seat cushion.

Pull up the rear seat cushion, and fold the seat leg down. Push the seat cushion firmly against the seat-back to lock it.

To return the seat cushion to its original position, first make sure there are no items on the floor, then pull up the seat leg fully, and push down the seat cushion slowly while holding it with your hands. Set the seat leg in the floor guide. A latch comes out when the leg is set properly.
Folding the Rear Seat Down
The rear seat-backs can be folded down for more cargo room.

Each side folds down separately, so you can still carry a passenger in the rear outer seating position.

Remove any items from the seat before folding down the seat-back.

Make sure there are no items on the floor before folding down the seats.

1. Move the front seat cushions as far forward as possible.

When you fold down the driver's side rear seat, use the latch plate to release the center seat belt from the detachable anchor (see page 92). Allow the seat belt to retract into the holder on the ceiling, and store the buckles in it.

2. Make sure the rear outer head restraint is locked in place. If you fold down the driver's side seat-back, also adjust the rear center head restraint to its lowest position.

3. Pull up the release lever on the outside of the seat-back.

4. Fold the seat-back forward.
5. Move the front seat backward to the desired position. Make sure the seat is locked in place.

Do not put any heavy items on the seat-back when it is folded.

Make sure that the folded down rear seat does not interfere with the front passenger’s seat-back. This will cause the front passenger’s weight sensors and the front passenger’s seat belt reminder indicator to work improperly (see pages 18 and 31). Also check the passenger airbag off indicator to assure proper operation of the passenger’s front airbag.

To return the seat-back to its upright position, move the front seat forward again, then lift up the seat-back.

While lifting the seat-back, the seat cushion may come up with it. To secure the seat cushion, see column three on page 89.

Make sure the seat-back and seat cushion are locked securely and all rear shoulder belts are positioned in front of the rear seat-backs. In the center seating position of the rear seat, be sure the detachable anchor is latched securely before using the seat belt (see page 92).

Make sure all items in the cargo area are secured. Loose items can fly forward and cause injury if you have to brake hard (See Carrying Cargo on page 140).
Detachable Anchor

The seat belt in the rear center seat is equipped with a detachable anchor.

This allows the center seat belt to be unlatched when the driver’s side rear seat is folded.

⚠️ WARNING

Using a seat belt with the detachable anchor unlatched increases the chance of serious injury or death in a crash.

Before using the seat belt, make sure the detachable anchor is correctly latched.

Pull out the small latch plate and the latch plate from each holding slot in the ceiling, and pull out the seat belt to extend it.

Line up the triangle marks on the small latch plate and anchor buckle when reattaching the belt and buckle.

Tug on the seat belt to verify that the detachable anchor is securely latched. Make sure the seat belt is not twisted.
To open the driver’s window fully, push the window switch firmly down to the second detent, and release it. The window will automatically go down all the way. To stop the window, pull back on the window switch briefly.

Turn the ignition switch to the ON (II) position to raise or lower any window. To open the window, push the switch down and hold it. Release the switch when you want to stop the window. To close the window, pull back on the switch and hold it.

To unlatch the detachable anchor, insert the latch plate into the slot on the side of the anchor buckle. Store the detachable anchor and seat belt latch plates in the retractor housing.

**WARNING**

Closing a power window on someone’s hands or fingers can cause serious injury.

Make sure your passengers are away from the windows before closing them.

**AUTO** — To open the driver’s window fully, push the window switch firmly down to the second detent, and release it. The window will automatically go down all the way. To stop the window, pull back on the window switch briefly.
Turn the ignition switch to the ON (II) position. Move the selector switch to L (driver’s side) or R (passenger’s side).

Keep the inside and outside mirrors clean and adjusted for best visibility. Be sure to adjust the mirrors before you start driving.

The inside mirror has day and night positions. The night position reduces glare from headlights behind you. Flip the tab on the bottom edge of the mirror to select the day or night position.

When you push the MAIN switch in, the switch is off, and the passenger windows cannot be raised or lowered. To cancel this feature, push on the switch again to get it to pop out. Keep the MAIN switch off when you have children in the vehicle so they do not injure themselves by operating the windows unintentionally.

Adjusting the Power Mirrors

1. Turn the ignition switch to the ON (II) position.

2. Move the selector switch to L (driver’s side) or R (passenger’s side).
3. Push the appropriate edge of the adjustment switch to move the mirror right, left, up, or down.

4. When you finish, move the selector switch to the center (off) position. This turns the adjustment switch off to keep your settings.

**Parking Brake**

To apply the parking brake, pull the lever up fully. To release it, pull up slightly, push the button, and lower the lever. The parking brake indicator on the instrument panel should go out when the parking brake is fully released (see page 60).

**NOTICE**

Driving the vehicle with the parking brake applied can damage the rear brakes and axles. A beeper will sound if the vehicle is driven with the parking brake on.
Interior Convenience Items

- Glove Box
- Accessory Power Socket
- Vanity Mirror
- Front Door Pocket
- Sun Visor
- Center Pocket
- Passenger's Tray
- Coin Tray
- Seat-back Pocket
- Beverage Holders
- Rear Side Pocket (Right Side)
- Coat Hook
- Glove Box
Be careful when you are using the beverage holders. A spilled liquid that is very hot can scald you or your passengers. Liquid can also spill from the door pocket beverage holders when you open or close the doors. Use only resealable containers in the door pockets.

Spilled liquids can damage the upholstery, carpeting, and electrical components in the interior.

Glove Box

Open the glove box by pushing the button. Close it with a firm push.

**WARNING**

An open glove box can cause serious injury to your passenger in a crash, even if the passenger is wearing the seat belt.

Always keep the glove box closed while driving.
Accessory Power Socket
This socket is intended to supply power for 12 volt DC accessories that are rated 120 watts or less (10 amps).

To use the accessory power socket, pull up the cover. The ignition switch must be in the ACCESSORY (I) or ON (II) position.

It will not power an automotive type cigarette lighter element.

Sun Visor
To use the sun visor, pull it down. When using the sun visor for the side window, remove the support rod from the clip, and swing it out.

Ceiling Light
The ceiling light has a three-position switch; ON, Door Activated, and OFF. In the Door Activated (center) position, the light comes on when you:

- Open any door.
- Unlock the doors and the tailgate with the key or the remote transmitter (if equipped).

After all doors are closed tightly, the light fades out in about 30 seconds.

The ceiling light (with the switch in the door activated position) comes on when you remove the key from the ignition switch. If you do not open a door, the light fades out in about 30 seconds.

If you leave any door open without the key in the ignition switch, the ceiling light will go off after 3 minutes.
The heating and air conditioning system in your vehicle provides a comfortable driving environment in all weather conditions.

The standard audio system has many features. This section describes those features and how to use them.

Your vehicle has an anti-theft audio system that requires a code number to enable it.

Vents, Heating, and A/C

If equipped U.S. model is shown.
Airflow Controls

Fan Control Dial
Turn this dial to increase or decrease the fan speed and airflow.

Temperature Control Dial
Turning this dial clockwise increases the temperature of the airflow.

Air Conditioning (A/C) Button
If equipped
This button turns the air conditioning on and off. The indicator in the button is on when the A/C is on.

Fresh Air/Recirculation Lever
This lever controls the source of the air going into the system. When you slide the lever to the side, air is brought in from outside the vehicle (fresh air mode). When you select the side, air from the vehicle’s interior is sent through the system again (recirculation mode).

Mode Control Dial
Use the mode control dial to select the vents the air flows from. Some air will flow from the dashboard corner vents in all modes.

The outside air intakes for the heating and cooling system are at the base of the windshield. Keep this area clear of leaves and other debris.

The system should be left in fresh air mode under almost all conditions. Keeping the system in recirculation mode, particularly with the A/C off, can cause the windows to fog up.

Switch to recirculation mode when driving through dusty or smoky conditions, then return to fresh air mode.

Airflow is divided between the floor vents and the defroster vents at the base of the windshield.

When you select or , the system automatically turns on the A/C (if equipped). You cannot turn the A/C off in this mode.
Ventilation
The flow-through ventilation system draws in outside air, circulates it through the interior, then discharges it through vents near the tailgate.

1. Set the temperature to the lower limit.
2. Make sure the A/C is off.
3. Select and .
4. Set the fan to the desired speed.

Using the Heater
The heater uses engine coolant to warm the air. If the engine is cold, it will be several minutes before you feel warm air coming from the system.

1. Select and .
2. Set the fan to the desired speed.
3. Adjust the warmth of the air with the temperature control dial.

Using the A/C
If equipped
Air conditioning places an extra load on the engine. Check the high temperature indicator (see page 63). If the indicator begins to blink, turn off the A/C until the indicator goes off.

1. Turn on the A/C by pressing the button. The indicator in the button comes on when a fan speed is selected.
2. Make sure the temperature is set to maximum cool.
3. Select .
4. If the outside air is humid, select recirculation mode. If the outside air is dry, select .
5. Set the fan to the desired speed.

If the interior is very warm, you can cool it down more rapidly by partially opening the windows, turning on the A/C, and setting the fan to maximum speed in .
Dehumidify the Interior
Air conditioning, as it cools, removes moisture from the air. When used in combination with the heater, it makes the interior warm and dry and can prevent the windows from fogging up.

1. Turn the fan on.
2. If the A/C is off, turn it on (if equipped).
3. Select 💦 and 🍁. Adjust the temperature to your preference.

This setting is suitable for all driving conditions whenever the outside temperature is above 32°F (0°C).

To Defog and Defrost
To remove fog from the inside of the windows:

1. Set the fan to the desired speed or high for faster defrosting.
2. Select 🍁 by sliding the lever.
3. Select 💦. The system automatically turns on the A/C (if equipped). The A/C indicator will not come on if it was previously off.
4. Adjust the temperature so the airflow feels warm.
5. Select 🍁 to help clear the rear window.
6. To increase airflow to the windshield, close the corner vents.

When you select 💦 or 🍁, the system automatically turns on the A/C. This helps to dehumidify the air and to defog the windshield. In either mode, you cannot turn off the A/C. When you switch to another mode, the A/C returns to its original setting, either on or off, as indicated by the A/C indicator.
To Remove Exterior Frost or Ice From the Windows
1. Set the fan and temperature controls to maximum level.
2. Select 🎈. The system automatically turns on the A/C (if equipped). The A/C indicator does not come on if it was previously off.
3. Select 🛁.

To clear the windows faster, you can close the dashboard corner vents by rotating the wheel below each vent. This sends more warm air to the windshield defroster vents. Once the windshield is clear, select fresh air mode to avoid fogging the windows.

For your safety, make sure you have a clear view through all the windows before driving.

To Turn Everything Off
Turning the fan speed control dial all the way to the left shuts the system off.

- Keep the system off for short periods only.
- To keep stale air and mustiness from collecting, you should have the fan running at all times.
Playing the AM/FM Radio

All models except Sport

- AM BUTTON
- FM BUTTON
- PWR/VOL KNOB
- TUNE BAR
- SEEK BAR
- SOUND BUTTON
- SCAN BUTTON
- PRESET BUTTONS
- AUTO SELECT BUTTON

Sport model

- AM/FM BUTTON

- AUTO SELECT BUTTON

Features
Playing the AM/FM Radio

To Play the AM/FM Radio
The ignition switch must be in the ACCESSORY (I) or ON (II) position. Turn the system on by pushing the PWR/VOL knob or the AM/FM button (AM or FM button except Sport model). Adjust the volume by turning the same knob.

The band and frequency that the radio was last tuned to is displayed. To change bands, press the AM/FM button (AM or FM button). On the FM band, ST will be displayed if the station is broadcasting in stereo. Stereo reproduction in AM is not available.

To Select a Station
You can use any of five methods to find radio stations on the selected band: tune, seek, scan, the preset buttons, and auto select.

TUNE — Use the TUNE bar to tune to a desired frequency. Press the ▶ side of the bar to tune to a higher frequency, and the ◀ side to tune to a lower frequency.

SEEK — The seek function searches up and down from the current frequency to find a station with a strong signal. To activate it, press the ◀ or ▶ side of the SEEK bar, then release it.

SCAN — The scan function samples all stations with strong signals on the selected band. To activate it, press the SCAN button, then release it. You will see SCAN in the display. The system will scan for a station with a strong signal. When it finds one, it will stop and play that station for about 10 seconds.

If you do nothing, the system will then scan for the next strong station and play it for 10 seconds. When it plays a station you want to listen to, press the SCAN button again.

PRESET — Each preset button (1 – 6) can store one station on AM, and two stations on FM.

1. Select the desired band, AM or FM, FM1 and FM2 let you store twelve stations.
2. Use the tune, seek, or scan function to tune the radio to a desired station.
3. Pick a preset number (1 – 6), and hold it until you hear a beep.
4. Repeat steps 1 through 3 to store a total of six stations on AM and twelve stations on FM.
AUTO SELECT — If you are traveling far from home and can no longer receive your preset stations, you can use the auto select feature to find stations in the local area.

Press the A. SEL button. “A. SEL” flashes in the display, and the system goes into scan mode for several seconds. It stores the frequencies of six AM and twelve FM stations in the preset buttons.

You will see a “0” displayed after pressing a preset button if auto select cannot find a strong station for that preset button.

If you do not like the stations auto select has stored, you can store other frequencies on the preset buttons as previously described.

To turn off auto select, press the A. SEL button. This restores the presets you originally set.

Adjusting the Sound
Press the SOUND button repeatedly to display the equalizer (EQ) [Sport only], bass, treble, fader, balance, and speed-sensitive volume compensation (SVC) settings.

BASS — Adjusts the bass.

TREBLE — Adjusts the treble.

FADER — Adjusts the front-to-back strength of the sound.

BALANCE — Adjusts the side-to-side strength of the sound.

Each mode is shown in the display as it changes. Turn the PWR/VOL knob to adjust the setting to your liking. When the level reaches the center, you will see a “ ” in the display.
Playing the AM/FM Radio

**SVC** — Adjusts the volume level based on the vehicle speed.

*On Sport model*

**EQ** — Selects the sound equalizer settings.

The system will return to the audio display about 5 seconds after you stop adjusting a mode.

---

### Speed-sensitive Volume Compensation (SVC)

The SVC mode controls the volume based on vehicle speed. The faster you go, the louder the audio volume becomes. As you slow down, the audio volume decreases.

The SVC has four modes: SVC OFF, SVC LOW, SVC MID, and SVC HIGH. Turn the PWR/VOL knob to adjust the setting to your liking. If you feel the sound is too loud, choose low. If you feel the sound is too quiet, choose high.

This function is set to MID as the default setting when the vehicle leaves the factory.

---

### Equalizer Settings (EQ)

*On Sport model*

You can select any of five equalizer settings. The equalizer adjusts the frequency ranges to suit the music or your personal listening preferences.

- **NORMAL** — The sound spectrum is leveled out for most types of music and general listening preferences.
- **BEATS** — Emphasizes the low end of the sound spectrum.
- **VOCAL** — Emphasizes the middle end of the sound spectrum.
- **SMOOTH** — Emphasizes the high end of the sound spectrum.
- **GROOVE** — Emphasizes the low and high ends of the entire spectrum for a “powerful” sound.
Audio System Lighting
You can use the instrument panel brightness control knob to adjust the illumination of the audio system (see page 73). The audio system illuminates when the parking lights are on, even if the radio is off.
The radio can receive the complete AM and FM bands. Those bands cover these frequencies:

- **AM band**: 530 to 1,710 kHz
- **FM band**: 87.7 to 107.9 MHz

Radio stations on the AM band are assigned frequencies at least 10 kHz apart (530, 540, 550). Stations on the FM band are assigned frequencies at least 0.2 MHz apart (87.9, 88.1, 88.3).

Stations must use these exact frequencies. It is fairly common for stations to round-off the frequency in their advertising, so your radio could display a frequency of 100.9 even though the announcer may identify the station as “FM101.”

Radio Reception

How well the radio receives stations is dependent on many factors, such as the distance from the station’s transmitter, nearby large objects, and atmospheric conditions.

A radio station’s signal gets weaker as you get farther away from its transmitter. If you are listening to an AM station, you will notice the sound volume becoming weaker, and the station drifting in and out. If you are listening to an FM station, you will see the stereo indicator flickering off and on as the signal weakens. Eventually, the stereo indicator will go off and the sound will fade completely as you get out of range of the station’s signal.

Driving very near the transmitter of a station that is broadcasting on a frequency close to the frequency of the station you are listening to can also affect your radio’s reception. You may temporarily hear both stations, or hear only the station you are close to.
Radio signals, especially on the FM band, are deflected by large objects such as buildings and hills. Your radio then receives both the direct signal from the station's transmitter, and the deflected signal. This causes the sound to distort or flutter. This is a main cause of poor radio reception in city driving.

Radio reception can be affected by atmospheric conditions such as thunderstorms, high humidity, and even sunspots. You may be able to receive a distant radio station one day and not receive it the next day because of a change in conditions.

Electrical interference from passing vehicles and stationary sources can cause temporary reception problems.

As required by the FCC: Changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate the equipment.
Playing a Disc

To Play a CD

All models except Sport

To load or play CDs, the ignition switch must be in the ACCESSORY (I) or the ON(II) position.

You operate the CD player with the same controls used for the radio. To select the CD player, press the CD button. The number of the track playing is shown in the display. The system will continuously play a CD until you change modes.

Insert a CD about halfway into the CD slot. The drive will pull the CD in the rest of the way to and begin play it. When the system reaches the end of the disc, it will return to the beginning and play the disc again.

You cannot load and play 3-inch (8-cm) discs in this system.

NOTICE

Do not use discs with adhesive labels. The label can curl up and cause the disc to jam in the unit.

To play the radio when a CD is playing, press the AM or FM button. Press the CD button again to switch back to the CD player.

If you turn the system off while a CD is playing, either with the PWR/VOL knob or by turning off the ignition switch, the disc will stay in the drive. When you turn the system back on, the CD will begin playing where it left off.

To Change or Select Tracks

SKIP — Each time you press and release the ► side of the SKIP bar, the player skips forward to the beginning of the next track. Press and release the ◄ side, to skip backward to the beginning of the current track. Press it again to skip to the beginning of the previous track.

To move rapidly within a track, press and hold the ► or ◄ side.

SEEK — To move rapidly within a track, press and hold the SEEK/SKIP bar. Press and hold ► to move forward. Press and hold ◄ to move backward. Release the bar when the system reaches the point you want.

Do not use discs with adhesive labels. The label can curl up and cause the disc to jam in the unit.
Playing a Disc

**REPEAT** — To continuously replay a track, press and release the RPT button. You will see RPT in the display. Press it again to turn it off.

**RANDOM** — This feature plays the tracks in random order. To activate random play, press and release the RDM button. You will see RDM in the display. Press it again to return to normal play.

**SCAN** — The scan function samples all the tracks on the disc in the order they are recorded on the CD. To activate it, press the SCAN button. You will see SCAN in the display. You will get a 10 second sampling of each track on the CD. Press the SCAN button again to get out of the system and play the last track sampled.

To Stop Playing a CD
Press the eject button (△) to remove the CD. If you eject the CD, but do not remove it from the slot, the system will automatically reload the CD after 10 seconds and put it in pause mode. To begin playing, press the CD button.

Press the AM or FM button to switch to the radio while a CD is playing. To play the CD, press the CD button.

If you turn the system off while a disc is playing, either with the PWR/VOL knob or by turning off the ignition switch, the disc will stay in the drive. When you turn the system back on, the disc will begin playing where it left off.
To Play a Disc

On Sport model

To load or play discs, the ignition switch must be in the ACCESSORY (I) or ON (II) position.

You operate the disc player with the same controls used for the radio. To select the disc player, press the CD button. You will see “CD” in the display. The number of the track playing is shown in the display. The system will continuously play a disc until you change modes.

The disc player can also play CD-Rs and CD-RWs compressed in CD-TEXT, MP3, and WMA formats. When playing a disc in MP3 or WMA, you will see “MP3” or “WMA” in the display. You can select up to 255 folders or tracks.

Video CDs and DVDs will not work in this unit.

The specifications of the compatible MP3 file are:
- Sampling frequency: 32/44.1/48 kHz (MPEG1), 24, 22.05, 16 kHz (MPEG2)
- Compatible with variable bit rate and multi-session.
- Maximum layers (including ROOT): 8 layers

The specifications of the compatible WMA file are:
- Sampling frequency: 32/44.1/48 kHz
- Bit rate: 48/64/80/96/128/160/192 kbps
- Compatible with variable bit rate and multi-session.
- Maximum layers (including ROOT): 8 layers

CONTINUED
Playing a Disc

Insert the disc about halfway into the disc slot. The drive will pull the disc in the rest of the way and begin to play it. When the system reaches the end of the disc, it will return to the beginning and play the disc again.

You cannot load and play 3-inch (8-cm) discs in this system.

To play the AM/FM radio when a disc is playing, press the AM/FM button. Press the CD button again to switch back to the disc player.

**NOTICE**

*Do not use discs with adhesive labels. The label can curl up and cause the disc to jam in the unit.*

**Name Display Function**

Each time you press the DISP button while playing a CD-TEXT, the display mode changes from album name, to track name, to artist name, and then to normal display. When playing a disc in MP3/WMA, the display mode changes from folder name, to file name, to artist tag, to album tag, to track tag, and then to normal display.

If the title is too long, it will not show all at once. Press and hold the DISP button, and the rest of the title will show in the display.

You will also see the album/track name (CD-TEXT), or the folder/file name (MP3/WMA) under these conditions:

- When you insert a disc, and the system begins to play.
- Each time a new track, file, or folder plays, other than in normal display mode.
To Change or Select Tracks/Files
You can use the SEEK/SKIP bar while a disc is playing to select passages and change tracks (files in MP3/WMA mode).

In MP3/WMA mode, use the FOLDER bar to select folders in the disc, and use the SEEK/SKIP bar to change files.

SEEK/SKIP — Each time you press and release the ►► side, the player skips forward to the beginning of the next track (files in MP3/WMA mode). Press and release the ◀◀ side to skip backward to the beginning of the current track. Press it again to skip to the beginning of the previous track.

To move rapidly within a track, press and hold the ►► or ◀◀ side of the SEEK/SKIP bar.

In MP3/WMA mode
FOLDER SELECTION — To select a different folder, press the left or right side of the FOLDER bar. Press the ► side to skip to the next folder, and the ◀ side to move to the beginning of the current folder. Press it again to skip to the previous folder.
Playing a Disc

**REPEAT (TRACK/FILE REPEAT)** — To continuously replay a track (file in MP3/WMA mode), press and release the RPT button. You will see RPT in the display. Press and hold the RPT button to turn it off.

**FOLDER-REPEAT** — This feature, when activated, replays all the files on the selected folder in the order they are compressed in MP3/WMA. To activate folder repeat mode, press the RPT button repeatedly until you see F-RPT in the display. The system continuously replays the current folder. Press and hold the RPT button to turn it off.

Each time you press and release the RPT button, the mode changes from file repeat to folder repeat, then to normal playing.

**RANDOM** — This feature plays the tracks within a disc in random order. In MP3/WMA mode, all files in all folders are played in random order. To activate random mode, press the RDM button repeatedly until you see RDM in the display. Press and release the RDM button again to return to normal play.
In MP3/WMA mode

**FOLDER-RANDOM** – This feature, when activated, plays the files in the current folder in random order, rather than in the order they are compressed in MP3/WMA. To activate folder random play, press the RDM button. You will see F-RDM in the display. The system will then select and play files randomly. This continues until you deactivate folder random play by pressing and holding the RDM button.

Each time you press and release the RDM button, the mode changes from folder random play, to within a disc random play, then to normal play.

**SCAN** – The scan function samples all the tracks/files on the disc in the order they are recorded on the disc. To activate the scan feature, press the SCAN button. You will see SCAN in the display. You will get a 10 second sampling of each track on the disc. You will also see a track/file name in the display. Press and hold the SCAN button to get out of the system and play the last track sampled.

**In MP3/WMA mode**

**F-SCAN** – This feature, when activated, plays the files in the current folder in random order, rather than in the order they are compressed in MP3/WMA. To activate the folder scan feature, press the SCAN button repeatedly until you see F-SCAN in the display. The folder name is also displayed. To hear the rest of the folder, press the SCAN button, within 10 seconds. If you do not, the system advances to the next folder, plays 10 seconds of it, and continues throughout the rest of the folder the same way. When the system samples the first file of all folders, F-SCAN is cancelled, and the system plays normally.
Playing a Disc

To Stop Playing a Disc
Press the eject button ( △ ) to remove the disc. If you eject the disc, but do not remove it from the slot, the system will automatically reload it after 10 seconds and put it in pause mode. To begin playing, press the CD button.

Press the AM/FM button to switch to the radio while a disc is playing. Press the CD button to play the disc.

If you turn the system off while a disc is playing, either with the PWR/VOL knob or by turning off the ignition switch, the disc will stay in the drive. When you turn the system back on, the disc will begin playing where it left off.
If you see an error message in the display while playing a disc, find the cause in the chart to the right. If you cannot clear the error message, take your vehicle to your dealer.

<table>
<thead>
<tr>
<th>Indication</th>
<th>Cause</th>
<th>Solution</th>

Disc Player Error Messages
Protecting Your Discs

General Information

- When using CD-R or CD-RW discs, use only high quality discs labeled for audio use.

- When recording a CD-R or CD-RW, the recording must be closed for it to be used by the system.

- Play only standard round discs. Odd-shaped discs may jam in the drive or cause other problems.

- Handle your discs properly to prevent damage and skipping.

**NOTICE**

*Do not use discs with adhesive labels. The label can curl up and cause the disc to jam in the unit.*

Protecting Discs

When a disc is not being played, store it in its case to protect it from dust and other contamination. To prevent warpage, keep discs out of direct sunlight and extreme heat.

To clean a disc, use a clean soft cloth. Wipe across the disc from the center to the outside edge.

A new disc may be rough on the inner and outer edges. The small plastic pieces causing this roughness can flake off and fall on the recording surface of the disc, causing skipping or other problems. Remove these pieces by rubbing the inner and outer edges with the side of a pencil or pen.

Never try to insert foreign objects in the disc player.

Handle a disc by its edges; never touch either surface. Do not place stabilizer rings or labels on the disc. These, along with contamination from finger prints, liquids, and felt-tip pens, can cause the disc to not play properly, or possibly jam in the drive.
The auxiliary input jack is underneath the accessory power socket in the center pocket. The system will accept auxiliary input from standard audio accessories.

When a compatible audio unit is connected to the jack, press the AUX button to select it.
Your vehicle’s audio system will disable itself if it is disconnected from electrical power for any reason. To make it work again, you must enter a specific five-digit code in the preset buttons. Because there are hundreds of number combinations possible from five digits, making the system work without knowing the exact code is nearly impossible.

You should have received a card that lists your audio system’s code and serial numbers. It is best to store this card in a safe place at home. In addition, you should write the audio system’s serial number in this owner’s manual.

If you lose the card, you must obtain the code number from a dealer. To do this, you will need the system’s serial number.

If your vehicle’s battery is disconnected or goes dead, or the radio fuse is removed, the audio system will disable itself. If this happens, you will see “ENTER CODE” in the frequency display the next time you turn on the system. Use the preset buttons to enter the code. The code is on the radio code card included in your owner’s manual kit. When it is entered correctly, the radio will start playing.

If you make a mistake entering the code, do not start over; complete the five-digit sequence, then enter the correct code. You have 10 tries to enter the correct code. If you are unsuccessful in 10 attempts, you must then leave the system on for 1 hour before trying again.
Press and hold the CLOCK button until you hear a beep. The displayed time begins to blink. Change the hours by pressing the H (preset 4) button until the numbers advance to the desired time. Change the minutes by pressing the M (preset 5) button until the numbers advance to the desired time.

Press the CLOCK button again to enter the set time.

You can quickly set the time to the nearest hour. If the displayed time is before the half hour, press the CLOCK button until you hear a beep, then press the R (preset 6) button to set the clock back to the previous hour. If the displayed time is after the half hour, the clock sets forward to the beginning of the next hour.

For example:
1:06 will reset to 1:00
1:53 will reset to 2:00
On Sport model

The security system helps to protect your vehicle and valuables from theft. The horn sounds and a combination of headlights, parking lights, side marker lights, and taillights flash if someone attempts to break into your vehicle or remove the radio. This alarm continues for 2 minutes, then it stops. To reset an alarming system before the 2 minutes have elapsed, unlock the driver’s door with the key or the remote transmitter.

The security system automatically sets 15 seconds after you lock the doors, hood, and the tailgate. For the system to activate, you must lock the doors and the tailgate from the outside with the key, driver’s lock tab, door lock master switch, or remote transmitter. The security system indicator on the instrument panel starts blinking immediately to show you the system is setting itself.

Once the security system is set, opening any door, the tailgate, or the hood without using the key or the remote transmitter, will cause it to alarm. It also alarms if the radio is removed from the dashboard or the wiring is cut.

The alarm will also be activated if the passenger inside the locked vehicle turns the ignition switch on.

The security system will not set if the hood, tailgate, or any door is not fully closed. If the system will not set, check the door and tailgate open indicator on the instrument panel (see page 62) to see if the doors and tailgate are fully closed. Since it is not part of the monitor display, manually check the hood.

NOTE: To see if the system is set after you exit the vehicle, press the LOCK button on the remote transmitter within 5 seconds. If the system is set, the horn will beep once.

Do not attempt to alter this system or add other devices to it.
Push the CRUISE button on the steering wheel. The CRUISE MAIN indicator on the instrument panel comes on.

Accelerate to the desired cruising speed above 25 mph (40 km/h).

Press and release the SET/DECEL button on the steering wheel. The CRUISE CONTROL indicator on the instrument panel comes on to show the system is now activated.

Cruise control may not hold the set speed when you are going up and down hills. If your speed increases going down a hill, use the brakes to slow down. This will cancel cruise control. To resume the set speed, press the RES/ACCEL button. The indicator on the instrument panel will come back on.

When climbing a steep hill, the automatic transmission may downshift to hold the set speed.

---

**On Sport model and Canadian LX model**

Cruise control allows you to maintain a set speed above 25 mph (40 km/h) without keeping your foot on the accelerator pedal. It should be used for cruising on straight, open highways. It is not recommended for city driving, winding roads, slippery roads, heavy rain, or bad weather.

**WARNING**

Improper use of the cruise control can lead to a crash.

Use the cruise control only when traveling on open highways in good weather.

---

**Using the Cruise Control**

1. Push the CRUISE button on the steering wheel. The CRUISE MAIN indicator on the instrument panel comes on.

2. Accelerate to the desired cruising speed above 25 mph (40 km/h).

3. Press and release the SET/DECEL button on the steering wheel. The CRUISE CONTROL indicator on the instrument panel comes on to show the system is now activated.

Cruise control may not hold the set speed when you are going up and down hills. If your speed increases going down a hill, use the brakes to slow down. This will cancel cruise control. To resume the set speed, press the RES/ACCEL button. The indicator on the instrument panel will come back on.

When climbing a steep hill, the automatic transmission may downshift to hold the set speed.
Cruise Control

Changing the Set Speed
You can increase the set cruising speed in any of these ways:

- Press and hold the RES/ACCEL button. When you reach the desired cruising speed, release the button.
- To increase your speed in very small amounts, tap the RES/ACCEL button. Each time you do this, the vehicle will speed up about 1 mph (1.6 km/h).
- Push on the accelerator pedal. Accelerate to the desired cruising speed, and press the DECEL/SET button.

You can decrease the set cruising speed in any of these ways:

- Press and hold the DECEL/SET button. Release the button when you reach the desired speed.
- To slow down in very small amounts, tap the DECEL/SET button. Each time you do this, your vehicle will slow down about 1 mph (1.6 km/h).
- Tap the brake or clutch pedal lightly with your foot. The CRUISE CONTROL indicator on the instrument panel goes out. When the vehicle slows to the desired speed, press the DECEL/SET button.

Even with the cruise control turned on, you can still use the accelerator pedal to speed up for passing. After completing the pass, take your foot off the accelerator pedal. The vehicle will return to the set cruising speed.

Resting your foot on the brake or clutch pedal causes the cruise control to cancel.
You can cancel cruise control in any of these ways:

- Tap the brake or clutch pedal.
- Push the CANCEL button on the steering wheel.
- Push the CRUISE button on the steering wheel.

Tapping either of the paddle shifters shifts the gear up or down, but does not cancel the cruise control. For more information on driving with paddle shifters, see page 156.

Resuming the Set Speed
When you push the CANCEL button, or tap the brake or clutch pedal, the system will remember the previously set cruising speed. To return to that speed, accelerate to above 25 mph (40 km/h) then press and release the RES/ACCEL button. The CRUISE CONTROL indicator comes on. The vehicle will accelerate to the same cruising speed as before.

Pressing the CRUISE button turns the system off and erases the previous cruising speed.
Before you begin driving your vehicle, you should know what gasoline to use and how to check the levels of important fluids. You also need to know how to properly store luggage or packages. The information in this section will help you. If you plan to add any accessories to your vehicle, please read the information in this section first.

Before Driving

Break-in Period .................................. 132

  Refueling ..................................... 133
  Opening and Closing
    the Hood ................................. 134
  Oil Check .................................. 135
  Engine Coolant Check ................... 136
Fuel Economy .................................. 137
Accessories and Modifications ....... 138
Carrying Cargo .............................. 140
Break-in Period
Help assure your vehicle’s future reliability and performance by paying extra attention to how you drive during the first 600 miles (1,000 km). During this period:

- Avoid full-throttle starts and rapid acceleration.
- Avoid hard braking for the first 200 miles (300 km).
- Do not change the oil until the scheduled maintenance time.

You should also follow these recommendations with an overhauled or exchanged engine, or when the brakes are replaced.

Fuel Recommendation
Your vehicle is designed to operate on unleaded gasoline with a pump octane number of 87 or higher. Use of a lower octane gasoline can cause a persistent, heavy metallic rapping noise that can lead to engine damage.

We recommend using quality gasolines containing detergent additives that help prevent fuel system and engine deposits.

In addition, in order to maintain good performance, fuel economy, and emissions control, we strongly recommend, in areas where it is available, the use of gasoline that does NOT contain manganese-based fuel additives such as MMT.

Use of gasoline with these additives may adversely affect performance, and cause the malfunction indicator lamp on your instrument panel to come on. If this happens, contact your authorized dealer for service.

Some gasoline today is blended with oxygenates such as ethanol or MTBE. Your vehicle is designed to operate on oxygenated gasoline containing up to 10% ethanol by volume and up to 15% MTBE by volume. Do not use gasoline containing methanol.

If you notice any undesirable operating symptoms, try another service station or switch to another brand of gasoline.

For further important fuel-related information, please refer to your Quick Start Guide.
Refueling

1. Park with the driver’s side closest to the service station pump.

2. Outside of the vehicle, open the fuel fill door by pulling its notched edge.

3. Remove the fuel fill cap slowly. You may hear a hissing sound as pressure inside the tank escapes. The fuel fill cap is attached to the fuel filler with a tether. Put the attachment on the fuel fill cap into the slit on the fuel fill door.

4. Stop filling the tank after the fuel nozzle automatically clicks off. Do not try to “top off” the tank. Leave some room for the fuel to expand with temperature changes. If the fuel nozzle keeps clicking off even though the tank is not full, there may be a problem with your vehicle’s fuel vapor recovery system. The system helps keep fuel vapors from going into the atmosphere. Try filling at another pump. If this does not fix the problem, consult your dealer.
5. Screw the fuel fill cap back on until it clicks at least once. If you do not properly tighten the cap, the malfunction indicator lamp may come on (see page 219). You will also see a “CHECK FUEL CAP” message on the information display.

6. Close the fuel fill door.

Opening and Closing the Hood

1. Park the vehicle, and set the parking brake. Pull the hood release handle under the lower left corner of the dashboard. The hood will pop up slightly.

2. Put your fingers under the front edge of the hood near the center. Slide your hand to the left until you feel the hood latch handle. Push this handle up to release it. Lift up the hood.

If the hood latch handle moves stiffly, or if you can open the hood without lifting the handle, the mechanism should be cleaned and lubricated.
Service Station Procedures

Oil Check

1. Wait a few minutes after turning the engine off before you check the oil.
2. Remove the dipstick (orange loop).
3. Wipe off the dipstick with a clean cloth or paper towel.
4. Insert the dipstick all the way back into its hole.

3. Holding the grip, pull the support rod out of its clip. Insert the end into the designated hole in the hood.

To close the hood, lift it up slightly to remove the support rod from the hole. Put the support rod back into its holding clip. Lower the hood to about a foot (30 cm) above the fender, then let it drop. Make sure it is securely latched.

If it is near or below the lower mark, see Adding Engine Oil on page 177.
Look at the coolant level in the radiator reserve tank. Make sure it is between the MAX and MIN lines. If it is below the MIN line, see Adding Engine Coolant on page 180 for information on adding the proper coolant.

Refer to Owner’s Maintenance Checks on page 172 for information about checking other items on your vehicle.
Improving Fuel Economy

- Always maintain your vehicle according to the maintenance messages displayed in the information display. See Owner's Maintenance Checks on page 172.

For example, an underinflated tire causes more “rolling resistance,” which uses more fuel.

The build-up of snow or mud on your vehicle’s underside adds weight and rolling resistance. Frequent cleaning helps your fuel mileage and reduces the chance of corrosion.

- Drive moderately. Rapid acceleration, abrupt cornering, and hard braking use more fuel.

- Always drive in the highest gear possible.

- Try to maintain a constant speed. Every time you slow down and speed up, your vehicle uses extra fuel. Use cruise control when appropriate.

- Combine several short trips into one.

- The air conditioning puts an extra load on the engine which makes it use more fuel. Use the fresh-air ventilation when possible.
Modifying your vehicle, or installing some non-Honda accessories, can make it unsafe. Before you make any modifications or add any accessories, be sure to read the following information.

**Accessories**
Your dealer has Honda accessories that allow you to personalize your vehicle. These accessories have been designed and approved for your vehicle, and are covered by warranty.

Although non-Honda accessories may fit on your vehicle, they may not meet factory specifications, and could adversely affect your vehicle's handling and stability.

---

**WARNING**

Improper accessories or modifications can affect your vehicle’s handling, stability, and performance, and cause a crash in which you can be hurt or killed.

Follow all instructions in this owner's manual regarding accessories and modifications.

When properly installed, cellular phones, alarms, two-way radios, and low-powered audio systems should not interfere with your vehicle's computer controlled systems, such as your airbags and anti-lock brakes.

Before installing any accessory:

- Make sure the accessory does not obscure any lights, or interfere with proper vehicle operation or performance.

- Be sure electronic accessories do not overload electrical circuits (see page 222) or interfere with the proper operation of your vehicle.

- Before installing any electronic accessory, have the installer contact your dealer for assistance. If possible, have your dealer inspect the final installation.

- Do not install accessories on the side pillars or across the rear windows. In these areas, accessories may interfere with proper operation of the side curtain airbags.
Modifying Your Vehicle
Removing parts from your vehicle, or replacing components, with non-Honda components could seriously affect your vehicle’s handling, stability, and reliability.

Here are some examples:

- Lowering the vehicle with a non-Honda suspension kit that significantly reduces ground clearance can allow the undercarriage to hit speed bumps or other raised objects, which could cause the airbags to deploy.

- Raising your vehicle with a non-Honda suspension kit can affect the handling and stability.

- Non-Honda wheels, because they are a universal design, can cause excessive stress on suspension components.

- Larger or smaller wheels and tires can interfere with the operation of your vehicle’s anti-lock brakes and other systems.

- Modifying your steering wheel or any other part of your vehicle’s safety features can make the systems ineffective.

If you plan to modify your vehicle, consult your dealer.
Your vehicle has several convenient storage areas:

- Glove box
- Front door pockets
- Seat-back pocket
- Center pocket
- Cargo area side pocket
- Cargo area, including the rear seats when folded up or down.

However, carrying too much cargo, or improperly storing it, can affect your vehicle’s handling, stability, stopping distance, and tires, and make it unsafe. Before carrying any type of cargo, be sure to read the following pages.
Load Limits
The maximum load for your vehicle is 850 lbs (385 kg) for U.S. models and 395 kg for Canadian models. This figure includes the total weight of all occupants, cargo, and accessories.

WARNING
Overloading or improper loading can affect handling and stability and cause a crash in which you can be hurt or killed.

Follow all load limits and other loading guidelines in this manual.

Steps for determining correct load limit:
1. Locate the statement, “the combined weight of occupants and cargo should never exceed 850 lbs” on your vehicle’s placard. [The placard is on the driver’s doorjamb.]
2. Determine the combined weight of the driver and passengers that will be riding in your vehicle.
3. Subtract the combined weight of the driver and passengers from 850 lbs.
4. The resulting figure equals the available amount of cargo and luggage load capacity. For example, if the maximum load is 850 lbs and there will be five 150 lb. passengers in your vehicle, the amount of available cargo and luggage load capacity is 100 lbs. [850 − 750 (5 × 150) = 100 lbs.]

5. Determine the combined weight of luggage and cargo being loaded in the vehicle. That weight may not safely exceed the available cargo and luggage load capacity in step 4.

In addition, the total weight of the vehicle, all occupants, accessories and cargo must not exceed the gross vehicle weight rating (GVWR) or the gross axle weight rating (GAWR). Both are on a label on the driver’s doorjamb.
Carrying Cargo in the Passenger Compartment

- Store or secure all items that could be thrown around and hurt someone during a crash.

- Be sure items placed on the floor behind the front seats cannot roll under the seats and interfere with the driver's ability to operate the pedals, the proper operation of the seats, or proper operation of the sensors under the seats.

- Keep the glove box closed while driving. If it is open, a passenger could injure their knees during a crash or sudden stop.

- If you fold the rear seats up or down, tie down items that could be thrown about the vehicle during a crash or sudden stop. Also, keep all cargo below the bottom of the windows. If it is higher, it could interfere with the proper operation of the side curtain airbags.

Carrying Cargo in the Cargo Area

- Distribute cargo evenly on the floor of the cargo area, placing the heaviest items on the bottom and as far forward as possible. Tie down items that could be thrown about the vehicle during a crash or sudden stop.

- If you carry large items that prevent you from closing the tailgate, exhaust gas can enter the passenger area. To avoid the possibility of carbon monoxide poisoning, follow the instructions on page 53.
Optional Separation Net
The separation net can be used to hold back soft, lightweight items stored in the cargo area. Heavy items should be properly secured on the floor of the cargo area. The net may not prevent heavy items from being thrown forward in a crash or a sudden stop.

The four hooks on the floor can be used to install a net for securing items.
This section gives you tips on starting the engine under various conditions, and how to operate the manual and automatic transmissions. It also includes important information on parking your vehicle and the braking system.

Driving Guidelines ........................... 146
Preventing to Drive ........................ 147
Starting the Engine .......................... 148
Manual Transmission ....................... 149
Automatic Transmission ..................... 151
Driving with the Paddle
  Shifters (Sport only) ....................... 156
Parking ......................................... 160
Braking System ................................ 161
Anti-lock Brakes (ABS) ..................... 162
Towing a Trailer ............................. 164
Your vehicle is designed to give you optimum handling and performance on well-maintained roads. As part of this design, your vehicle has a minimum of ground clearance.

- Use caution if you ever drive your vehicle on very rough or rutted roads. You could damage the suspension and underbody by bottoming out. Going too fast over parking lot “speed bumps” can also cause damage.

- Curbs and steep inclines could damage the front and rear bumpers. Low curbs that do not affect the average vehicle may be high enough to hit the bumper on your vehicle. The front or rear bumper may scrape when trying to drive onto an incline, such as a steep driveway or trailer ramps.
Preparing to Drive
You should do the following checks and adjustments before you drive your vehicle.

1. Make sure all windows, mirrors, and outside lights are clean and unobstructed. Remove frost, snow, or ice.

2. Check that the hood is fully closed.

3. Visually check the tires. If a tire looks low, use a gauge to check its pressure (see page 197).

4. Check that any items you may be carrying are stored properly or fastened down securely.

5. Check the seat adjustment (see page 85).

6. Check the adjustment of the inside and outside mirrors (see page 94).

7. Check the steering wheel adjustment (see page 74).

8. Make sure the doors and the tailgate are securely closed and locked.

9. Fasten your seat belt. Check that your passengers have fastened their seat belts (see page 14).

10. When you start the engine, check the gauges and indicators in the instrument panel (see page 60).
Starting the Engine

1. Apply the parking brake.

2. In cold weather, turn off all electrical accessories to reduce the drain on the battery.

3. Manual transmission:
Press the clutch pedal down all the way. The START (III) position does not function unless the clutch pedal is pressed.

   Automatic transmission:
Make sure the shift lever is in Park. Press on the brake pedal.

4. Without touching the accelerator pedal, turn the ignition key to the START (III) position. Do not hold the key in the START (III) position for more than 15 seconds at a time. If the engine does not start right away, pause for at least 10 seconds before trying again.

   **NOTICE**
   The immobilizer system protects your vehicle from theft. If an improperly-coded key (or other device) is used, the engine’s fuel system is disabled. For more information, see page 76.

5. If the engine does not start within 15 seconds, or starts but stalls right away, repeat step 4 with the accelerator pedal pressed halfway down. If the engine starts, release pressure on the accelerator pedal so the engine does not race.

6. If the engine fails to start, press the accelerator pedal all the way down, and hold it there while starting to clear flooding. If the engine still does not start, return to step 5.
Come to a full stop before you shift into reverse. You can damage the transmission by trying to shift into reverse with the vehicle moving. Push down the clutch pedal, and pause for a few seconds before shifting into reverse, or shift into one of the forward gears for a moment. This stops the gears so they won’t “grind.”

When slowing down, you can get extra braking from the engine by shifting to a lower gear. This extra braking can help you maintain a safe speed and prevent your brakes from overheating while going down a steep hill. Before downshifting, make sure the engine speed will not go into the tachometer’s red zone in the lower gear.

The manual transmission is synchronized in all forward gears for smooth operation. It has a lockout so you cannot shift directly from fifth to reverse. When shifting up or down, make sure you push the clutch pedal down all the way, shift to the next gear, and let the pedal up gradually. When you are not shifting, do not rest your foot on the clutch pedal. This can cause the clutch to wear out faster.

**WARNING**

Rapid slowing or speeding-up can cause loss of control on slippery surfaces. If you crash, you can be injured.

Use extra care when driving on slippery surfaces.
Recommended Shift Points
Drive in the highest gear that lets the engine run and accelerate smoothly. This will give you good fuel economy and effective emissions control. The following shift points are recommended:

<table>
<thead>
<tr>
<th>Shift up</th>
<th>Normal acceleration</th>
</tr>
</thead>
<tbody>
<tr>
<td>1st to 2nd</td>
<td>15 mph (24 km/h)</td>
</tr>
<tr>
<td>2nd to 3rd</td>
<td>27 mph (43 km/h)</td>
</tr>
<tr>
<td>3rd to 4th</td>
<td>39 mph (62 km/h)</td>
</tr>
<tr>
<td>4th to 5th</td>
<td>53 mph (85 km/h)</td>
</tr>
</tbody>
</table>

Engine Speed Limiter
If you exceed the maximum speed for the gear you are in, the engine speed will enter into the tachometer’s red zone. If this occurs, you may feel the engine cut in and out. This is caused by a limiter in the engine’s computer controls. The engine will run normally when you reduce the rpm below the red zone.

The engine speed limiter only works when you upshift; engine speed is not limited during downshifts. Before downshifting, make sure the engine will not go into the tachometer’s red zone.
These indicators on the instrument panel show which position the shift lever is in.

The “D” indicator comes on for a few seconds when you turn the ignition switch to the ON (II) position. If it flashes while driving (in any shift position), it indicates a possible problem in the transmission.

If the malfunction indicator lamp comes on along with the “D” indicator, there is a problem in the automatic transmission control system. Avoid rapid acceleration, and have the transmission checked by your dealer as soon as possible.

To shift from any position, press firmly on the brake pedal and press the release button on the front of the shift lever, then pull the lever. You cannot shift out of Park when the ignition switch is in the LOCK (0) or the ACCESSORY (I) position.
This position mechanically locks the transmission. Use Park whenever you are turning off or starting the engine. To shift out of Park, you must press on the brake pedal and have your foot off the accelerator pedal. Press the release button on the front of the shift lever to move it.

If you have done all of the above and still cannot move the lever out of Park, see Shift Lock Release on page 155.

To avoid transmission damage, come to a complete stop before shifting into Park. You must also press the release button to shift into Park. The shift lever must be in Park before you can remove the key from the ignition switch.

</table>

Park (P) — This position mechanically locks the transmission. Use Park whenever you are turning off or starting the engine. To shift out of Park, you must press on the brake pedal and have your foot off the accelerator pedal. Press the release button on the front of the shift lever to move it.
Reverse (R) — Press the brake pedal and press the release button on the front of the shift lever to shift from Park to reverse. To shift from reverse to neutral, come to a complete stop, and then shift. Press the release button before shifting into reverse from neutral.

Neutral (N) — Use neutral if you need to restart a stalled engine, or if it is necessary to stop briefly with the engine idling. Shift to the Park position if you need to leave your vehicle for any reason. Press on the brake pedal when you are moving the shift lever from neutral to another gear.

Drive (D) — Use this position for your normal driving. The transmission automatically selects a suitable gear (1 through 5) for your speed and acceleration. You may notice the transmission shifting up at higher engine speeds when the engine is cold. This helps the engine warm up faster.

All models except Sport

Drive (D3) — This position is similar to D, except only the first three gears are selected. Use D3 to provide engine braking when going down a steep hill. D3 can also keep the transmission from cycling between third and fourth gears in stop-and-go driving.

All models except Sport

Second (2) — To shift to second, press the release button on the front of the shift lever. This position locks the transmission in second gear. It does not downshift to first gear when you come to a stop.

Use second gear:
• For more power when climbing.
• To increase engine braking when going down steep hills.
• For starting out on a slippery surface or in deep snow.
• To help reduce wheel spin.
To shift into the S position, press the release button on the front of the shift lever, and move the lever to S. This position is similar to D, except only gears from first to fourth are selected. S position keep the transmission from cycling between fourth and fifth gears in stop-and-go driving.

With the shift lever in D or S, you can also use the paddle shifters to shift the transmission up or down. With the paddle shifters, you can operate the transmission much like a manual transmission without a clutch pedal. For more information of driving with the paddle shifters, see page 156.

All models except Sport
First (1) — To shift from second to first, press the release button on the front of the shift lever. This position locks the transmission in first gear. By upshifting and downshifting through 1, 2, D3, and D, you can operate the transmission much like a manual transmission without a clutch pedal.

On Sport model
S position (S) — To shift into the S position, press the release button on the front of the shift lever, and move the lever to S. This position is similar to D, except only gears from first to fourth are selected. S position keep the transmission from cycling between fourth and fifth gears in stop-and-go driving.

Engine Speed Limiter
If you exceed the maximum speed for the gear you are in, the engine speed will enter into the tachometer’s red zone. If this occurs, you may feel the engine cut in and out. This is caused by a limiter in the engine’s computer controls. The engine will run normally when you reduce the rpm below the red zone.
Shift Lock Release
This allows you to move the shift lever out of Park if the normal method of pushing on the brake pedal and pressing the release button does not work.

1. Set the parking brake.

2. Remove the key from the ignition switch.

3. Put a cloth on the notch of the shift lock release slot cover. Using a small flat-tipped screwdriver or a metal fingernail file, carefully pry on the notch of the cover to remove it.

4. Insert the key in the shift lock release slot.

5. Push down on the key while you press the release button on the shift lever and move the shift lever out of Park to neutral.

6. Remove the key from the shift lock release slot, then reinstall the cover. Make sure the notch on the cover is on the left side. Press the brake pedal, and restart the engine.

If you need to use the shift lock release, it means your vehicle is developing a problem. Have it checked by your dealer.
Driving with the Paddle Shifters (Sport only)

Using the Paddle Shifters in D position (D-Paddle Shift Mode)

When you are driving in D position, you can shift the transmission up or down manually with the paddle shifters.

To shift up or down, use the + (right) or − (left) paddle shifter on each side of the steering wheel.

Each time you pull the + (right), the transmission shifts to a higher gear. Pull the − (left) to downshift. You will see the selected gear number on the instrument panel.

When you pull either paddle shifter, the gear position indicator shows you the selected gear number.

When the transmission returns to drive mode (D), the displayed gear number goes out.

Downshifting with the paddle shifter allows you to increase the engine braking when going down steep or long hills, and provides more power when climbing uphills. You can upshift the transmission manually to reduce the rpm. Driving in the higher gear helps fuel economy.
Driving with the Paddle Shifters (Sport only)

The transmission control system monitors the accelerator pedal use and your driving conditions. When you press the accelerator pedal as in the normal driving, the system judges that you are driving at a constant cruising speed without using the paddle shifters. Under these conditions, D-paddle shift mode is cancelled, and the transmission automatically returns to drive mode (D).

The transmission remains in the selected gear if you do not accelerate.

Each time you pull either paddle shifter, the transmission shifts one gear up or down. If you want to shift up or down more than two gears, pull the paddle shifter twice, pause, and then pull it again.

You cannot downshift with the paddle shifter before the engine speed reaches the upper limit of the lower gear. If you try to do this, the gear position indicator will flash the number of the lower gear several times, then return to a higher gear position.

Also, you cannot upshift with the paddle shifter before the engine speed reaches the lower limit of the higher gear.

The transmission downshifts to first gear and returns to drive mode (D) when the vehicle comes to a complete stop and the vehicle speed is about 6 mph (10 km/h).

If there is a problem in the transmission while you are driving with the paddle shifters, the D indicator flashes, the D-paddle shift mode is canceled, and the transmission returns to drive mode (D).
Using the Paddle Shift in S position (Sequential Shift Mode)
With the shift lever in S position, you can manually shift up or down with the paddle shifters. The transmission goes into the sequential shift mode and holds the selected gear.

To enter the sequential shift mode, press the release button on the front of the shift lever, move the lever to the S position, then pull either paddle shifter. To return to drive mode (D), move the shift lever to the D position. While you are driving in the sequential shift mode, the transmission will not automatically return to drive mode (D).

When you move the shift lever from “D” to “S” position and pull either paddle shifter, the gear position indicator displays on “M” along with the selected gear number.

To upshift, pull the + (right) paddle shifter. To downshift, pull the − (left) paddle shifter.

When you accelerate from a stop, the transmission starts in first gear, and you must manually upshift between first and fifth gears. Make sure you upshift before the engine speed reaches the tachometer’s red zone.

The transmission remains in the selected gear (5, 4, 3, 2, or 1). There is no automatic downshift when you push the accelerator pedal to the floor.

When you are driving in 4th or 5th gear, the transmission downshifts to the lower gear under the following conditions:

- The vehicle slows down to a certain speed.
- You press the brake pedal.
Driving with the Paddle Shifters (Sport only)

Downshifting gives you more power when climbing, and provides engine braking when going down a steep hill.

The transmission also shifts automatically as the vehicle comes to a complete stop. It downshifts to first gear when the vehicle speed reaches 6 mph (10 km/h) or less.

You cannot downshift with the paddle shifter before the engine speed reaches the upper limit of the lower gear. If you try to do this, the gear indicator will flash the number of the lower gear several times, then the indicator will display the higher gear number.

If the vehicle speed decreases below the redline of the selected lower gear while the indicator is flashing, the transmission downshifts, and the indicator displays the selected gear.

Here are the speed ranges for upshifting and downshifting.

Starting in Second Gear

When you are in sequential shift mode, and the vehicle is stopped, pull the + (right) paddle shifter to shift to second gear. You will see “M 2” in the display. Starting in second gear helps to reduce wheelspin in deep snow or on a slippery surface.
Always use the parking brake when you park your vehicle. Make sure the parking brake is set firmly, or your vehicle may roll if it is parked on an incline.

If your vehicle has an automatic transmission, set the parking brake before you put the transmission in Park. This keeps the vehicle from moving and putting pressure on the parking mechanism in the transmission.

If the vehicle is facing uphill, turn the front wheels away from the curb. If you have a manual transmission, put it in first gear.

Make sure the windows are closed. Turn off the lights.

Place any packages, valuables, etc. in the cargo area or take them with you.

Lock the doors and the tailgate.

On Sport model
Check the indicator on the instrument panel to verify that the security system is set.

Never park over dry leaves, tall grass, or other flammable materials. The hot three way catalytic converter could cause these materials to catch on fire.

If the vehicle is facing downhill, turn the front wheels toward the curb. If you have a manual transmission, put it in reverse gear.

Make sure the parking brake is fully released before driving away. Driving with the parking brake partially set can overheat or damage the rear brakes.
Your vehicle is equipped with front disc brakes. The brakes on the rear wheels are drum. A power assist helps reduce the effort needed on the brake pedal. The anti-lock brake system (ABS) helps you retain steering control when braking very hard.

Resting your foot on the pedal keeps the brakes applied lightly, builds up heat, and reduces their effectiveness. It also keeps your brake lights on all the time, confusing drivers behind you.

Constant application of the brakes when going down a long hill builds up heat and reduces their effectiveness. Use the engine to assist the brakes by taking your foot off the accelerator and downshifting to a lower gear.

Check your brakes after driving through deep water. Apply the brakes moderately to see if they feel normal. If not, apply them gently and frequently until they do. Be extra cautious and alert in your driving.

**Braking System Design**
The hydraulic system that operates the brakes has two separate circuits. Each circuit works diagonally across the vehicle (the left-front brake is connected with the right-rear brake, etc.). If one circuit should develop a problem, you will still have braking at two wheels.

**Brake Pad Wear Indicators**
If the front brake pads need replacing, you will hear a distinctive, metallic screeching sound when you apply the brake pedal. If you do not have the brake pads replaced, they will screech all the time. It is normal for the brakes to occasionally squeal or squeak when you apply them.
The anti-lock brake system (ABS) helps prevent the brakes from locking up, and helps you retain steering control by pumping the brakes rapidly, much faster than a person can do it.

The ABS also balances the front-to-rear braking distribution according to vehicle loading.

*You should never pump the brake pedal.* Let the ABS work for you by always keeping firm, steady pressure on the brake pedal. This is sometimes referred to as “stomp and steer.”

You will feel a pulsation in the brake pedal when the ABS activates, and you may hear some noise. This is normal: it is the ABS rapidly pumping the brakes. On dry pavement, you will need to press on the brake pedal very hard before the ABS activates. However, you may feel the ABS activate immediately if you are trying to stop on snow or ice.

**ABS Indicator**

If this indicator comes on, the anti-lock function of the braking system has shut down. The brakes still work like a conventional system, but without anti-lock. You should have your dealer inspect your vehicle as soon as possible.

If the ABS indicator comes on while driving, test the brakes as shown on page 220.
If the ABS indicator and the brake system indicator come on together, and the parking brake is fully released, the front-to-rear braking distribution system may also be shut down.

Test your brakes as instructed on page 220. If the brakes feel normal, drive slowly and have your vehicle repaired by your dealer as soon as possible. Avoid sudden hard braking which could cause the rear wheels to lock up and possibly lead to a loss of control.

**Important Safety Reminders**

**ABS does not reduce the time or distance it takes to stop the vehicle.** It only helps with the steering control during braking.

**ABS will not prevent a skid that results from changing direction abruptly,** such as trying to take a corner too fast or making a sudden lane change. Always drive at a safe speed for the road and weather conditions.

**ABS cannot prevent a loss of stability.** Always steer moderately when you are braking hard. Severe or sharp steering wheel movement can still cause your vehicle to veer into oncoming traffic or off the road.

A vehicle with ABS may require a longer distance to stop on loose or uneven surfaces, such as gravel or snow, than a vehicle without anti-lock.
Your vehicle is not designed to tow a trailer; Attempting to do so can void your warranties.
This section explains why it is important to keep your vehicle well maintained and how to follow basic maintenance safety precautions.

This section also includes instructions on how to read the maintenance minder messages on the information display, a maintenance record, and instructions for simple maintenance tasks you may want to take care of yourself.

If you have the skills and tools to perform more complex maintenance tasks on your vehicle, you may want to purchase the service manual. See page 245 for information on how to obtain a copy, or see your dealer.

All service items not detailed in this section should be performed by a certified technician or other qualified mechanic.

**Important Safety Precautions**
- To eliminate potential hazards, read the instructions before you begin, and make sure you have the tools and skills required.
  - Make sure your vehicle is parked on level ground, the parking brake is set, and the engine is off.
  - To clean parts, use a commercially available degreaser or parts cleaner, not gasoline.
  - To reduce the possibility of fire or explosion, keep cigarettes, sparks, and flames away from the battery and all fuel-related parts.
  - Wear eye protection and protective clothing when working with the battery or compressed air.

**WARNING**

Improperly maintaining this vehicle, or failing to correct a problem before driving can cause a crash in which you can be seriously hurt or killed.

Always follow the inspection and maintenance recommendations and schedules in this owner's manual.

**Potential Vehicle Hazards**
- **Carbon Monoxide poison from engine exhaust.** Be sure there is adequate ventilation whenever you operate the engine.
- **Burns from hot parts.** Let the engine and exhaust system cool down before touching any parts.

**WARNING**

Failure to properly follow maintenance instructions and precautions can cause you to be seriously hurt or killed.

Always follow the procedures and precautions in this owner's manual.

Some of the most important safety precautions are given here. However, we cannot warn you of every conceivable hazard that can arise in performing maintenance. Only you can decide whether or not you should perform a given task.
Your vehicle displays engine oil life and maintenance service items on the information display to show you when you should have your dealer do engine oil replacement and indicated maintenance service.

Based on the engine operating conditions and accumulated engine revolutions, the onboard computer in your vehicle calculates the remaining engine oil life and displays it as a percentage.

To see the current engine oil life, turn the ignition switch to the ON (II) position, then press and release the Select/Reset knob repeatedly until the engine oil life indicator appears (see page 68).

The remaining engine oil life is displayed on the engine oil life display according to this table:

<table>
<thead>
<tr>
<th>Calculated Engine Oil Life (%)</th>
<th>Displayed Engine Oil Life (%)</th>
</tr>
</thead>
<tbody>
<tr>
<td>100% – 91%</td>

</tbody>
</table>
If the remaining engine oil life is 15 to 6 percent, you will see the engine oil life indicator every time you turn the ignition switch to the ON (II) position. The maintenance minder indicator will also come on, and the maintenance item code(s) for other scheduled maintenance items needing service will be displayed below the “OIL LIFE” message.

The 15 and 10 percent oil life indicator reminds you that the time is coming soon to take your vehicle in for the required maintenance.

When the remaining engine oil life is 5 to 1 percent, you will see a “SERVICE” message along with the same maintenance item code(s), every time you turn the ignition switch to the ON (II) position.
If you do not perform the indicated maintenance, negative mileage is displayed and begins to blink after the vehicle has been driven over 10 miles (10 km).

Immediately have the indicated maintenance done by your dealer.

The maintenance item code or codes indicate the main and sub items required at the time of the oil change (see page 170).

You can switch the information display from the engine oil life display to the odometer or the trip meter. Press and release the Select/Reset knob on the instrument panel.

When the engine oil life is 15 to 1 percent, the maintenance minder indicator ( ) comes on every time you turn the ignition switch to the ON (II) position, then it goes out if you switch the information display.

When you see this message, have the indicated maintenance performed by your dealer as soon as possible.

When the remaining engine oil life is 0 percent, the engine oil life indicator will blink. The display comes on every time you turn the ignition switch to the ON (II) position. The maintenance minder indicator ( ) also comes on and remains on in the instrument panel. When you see this message, immediately have the indicated maintenance performed by your dealer.

If you do not perform the indicated maintenance, negative mileage is displayed and begins to blink after the vehicle has been driven over 10 miles (10 km).

Negative mileage means your vehicle has passed the maintenance required point.

Immediately have the indicated maintenance done by your dealer.
Maintenance Minder

To change the information display from the engine oil life display to the odometer or the trip meter, press and release the Select/Reset knob.

When the engine oil life is 0 percent or negative mileage, the maintenance minder indicator (️) remains on even if you change the information display.

Immediately have the service performed, and make sure to reset the display as described on the following.

Maintenance Main Items and Sub Items

<table>
<thead>
<tr>
<th>MAINTENANCE MAIN ITEM</th>
<th>MAINTENANCE SUB ITEM(S)</th>
</tr>
</thead>
<tbody>
<tr>
<td>OILIFE 15%</td>
<td>12345</td>
</tr>
</tbody>
</table>

All maintenance items displayed in the information display are in code. For an explanation of these maintenance codes, see page 173.

Resetting the Engine Oil Life Display

Your dealer will reset the display after completing the required maintenance service. You will see “OIL LIFE 100 %” on the information display the next time you turn the ignition switch to the ON (II) position.

If maintenance service is done by someone other than your dealer, reset the maintenance minder as follows:

1. Turn the ignition switch to the ON (II) position.

2. Press the Select/Reset knob repeatedly until the engine oil life is displayed.
If you have the required service done but do not reset the display, or reset the display without doing the service, the system will not show the proper maintenance intervals. This can lead to serious mechanical problems because you will no longer have an accurate record of when maintenance is needed.

Your authorized Honda dealer knows your vehicle best and can provide competent, efficient service.

3. Press the Select/Reset knob for about 10 seconds. The engine oil life and the maintenance item code(s) will blink.

4. Press the Select/Reset knob for another 5 seconds. The maintenance item code(s) will disappear, and the engine oil life will reset to “100.”
However, service at a dealer is not mandatory to keep your warranties in effect. Maintenance may be done by any qualified service facility or person who is skilled in this type of automotive service. Make sure to have the service facility or person reset the display as previously described. Keep all receipts as proof of completion, and have the person who does the work fill out the maintenance record. Check your warranty booklet for more information.

We recommend using Honda parts and fluids whenever you have maintenance done. These are manufactured to the same high-quality standards as the original components, so you can be confident of their performance and durability.

U.S. Vehicles: **Maintenance, replacement, or repair of emissions control devices and systems may be done by any automotive repair establishment or individual using parts that are “certified” to EPA standards.**

According to state and federal regulations, failure to perform maintenance on the items marked with # will not void your emissions warranties. However, all maintenance services should be performed in accordance with the intervals indicated by the information display.

**Owner’s Maintenance Checks**

You should check the following items at the specified intervals. If you are unsure of how to perform any check, turn to the appropriate page listed.

- Engine oil level — Check every time you fill the fuel tank. See page 135.
- Engine coolant level — Check the radiator reserve tank every time you fill the fuel tank. See page 136.
- Automatic transmission — Check the fluid level monthly. See page 183.
- Brakes — Check the fluid level monthly. See page 185.
- Tires — Check the tire pressure monthly. Examine the tread for wear and foreign objects. See page 199.
- Lights — Check the operation of the headlights, parking lights, taillights, high-mount brake light, and license plate lights monthly. See page 186.
Inspect idle speed every 160,000 miles (256,000 km).

Adjust the valves during services A, B, 1, 2, or 3 only if they are noisy.

If the message “SERVICE” does not appear more than 12 months after the display is reset, change the engine oil every year.

Independent of the maintenance items in the information display, replace the brake fluid every 3 years.

Replace engine oil

Replace engine oil and oil filter

Inspect front and rear brakes

Check parking brake adjustment

Inspect these items:
- Tie rod ends, steering gear box, and boots
- Suspension components
- Driveshaft boots
- Brake hoses and lines (including ABS)
- All fluid levels and condition of fluids
- Exhaust system
- Fuel lines and connections

NOTE:
- Replace engine coolant

1: If the message “SERVICE” does not appear more than 12 months after the display is reset, change the engine oil every year.

# : See information on maintenance and emissions warranty on page 172.

Replace air cleaner element

If you drive in dusty conditions, replace every 15,000 miles (24,000 km).

Replace dust and pollen filter

If you drive primarily in urban areas that have high concentrations of soot in the air from industry and from diesel-powered vehicles, replace every 15,000 miles (24,000 km).

Inspect drive belt

Replace transmission fluid

Driving in mountainous areas at very low vehicle speeds results in higher transmission temperatures. This requires transmission fluid changes more frequently than recommended by the maintenance minder. If you regularly drive your vehicle under these conditions, have the transmission fluid changed at 60,000 miles (100,000 km), then every 30,000 miles (48,000 km).

Replace spark plugs

Inspect valve clearance

Replace engine coolant

* 2: Automatic transmission
You or the servicing dealer can record all completed maintenance here. When maintenance is performed, record the mileage, circle the coded item(s) completed, and write in any other non-coded items (such as brake fluid replacement) below the codes. Keep the receipts for all work done on your vehicle. Maintenance can also be recorded in your Honda service history booklet.

Fluid Locations

- ENGINE OIL DIPSTICK (Orange loop)
- ENGINE OIL FILL CAP
- BRAKE FLUID (Black cap)
- CLUTCH FLUID (Manual Transmission only) (Gray cap)
- RADIATOR CAP
- ENGINE COOLANT RESERVOIR
- WASHER FLUID (Blue cap)
- AUTOMATIC TRANSMISSION FLUID DIPSTICK (Yellow loop)
Adding Engine Oil

Unscrew and remove the engine oil fill cap on the valve cover. Pour in the oil slowly and carefully so you do not spill any. Clean up any spills immediately. Spilled oil could damage components in the engine compartment. Reinstall the engine oil fill cap, and tighten it securely. Wait a few minutes, and recheck the oil level on the engine oil dipstick. Do not fill above the upper mark; you could damage the engine.

Recommended Engine Oil
Oil is a major contributor to your engine’s performance and longevity. Always use a premium-grade 5W-20 detergent oil displaying the API Certification Seal. This seal indicates the oil is energy conserving, and that it meets the American Petroleum Institute’s latest requirements.

Honda Motor Oil is the preferred 5W-20 lubricant for your vehicle. It is highly recommended that you use Honda Motor Oil in your vehicle for optimum engine protection. Make sure the API Certification Seal says “For Gasoline Engines.”

The oil viscosity or weight is provided on the container’s label. 5W-20 oil is formulated for year-round protection of your vehicle to improve cold weather starting and fuel economy.
Adding Engine Oil, Changing the Engine Oil and Filter

Synthetic Oil
You may use a synthetic motor oil if it meets the same requirements given for a conventional motor oil, it displays the API Certification Seal, and it is the proper weight. You must follow the oil and filter change intervals given in the maintenance schedule.

Engine Oil Additives
Your vehicle does not require any oil additives. Additives may adversely affect the engine or transmission performance and durability.

Changing the Engine Oil and Filter
Always change the oil and filter according to the maintenance messages shown on the information display. The oil and filter collect contaminants that can damage your engine if they are not removed regularly.

Changing the oil and filter requires special tools and access from underneath the vehicle. The vehicle should be raised on a service station-type hydraulic lift for this service. Unless you have the knowledge and proper equipment, you should have this maintenance done by a skilled mechanic.

1. Run the engine until it reaches normal operating temperature, then shut it off.
2. Open the hood, and remove the engine oil fill cap. Remove the oil drain bolt and washer from the bottom of the engine. Drain the oil into an appropriate container.
Refill the engine with the recommended oil.

Engine oil change capacity (including filter):

Replace the engine oil fill cap.

Start the engine. The oil pressure indicator should go out within 5 seconds. If it does not, turn off the engine, and check your work.

Let the engine run for several minutes, then check the drain bolt and oil filter for leaks.

Turn off the engine and let it sit for several minutes, then check the oil level on the dipstick. If necessary, add more oil.

3. Remove the oil filter, and let the remaining oil drain. A special wrench (available from your dealer) is required.

Make sure the oil filter gasket is not stuck to the engine block. If it is, remove it before installing a new oil filter.

4. Install a new oil filter according to the instructions that come with it.

5. Put a new washer on the drain bolt, then reinstall the drain bolt. Tighten the drain bolt to:

3.8 US qt (3.6 l)

6. Refill the engine with the recommended oil.

Engine oil change capacity (including filter):

29 lbf-ft (39 N·m , 4.0 kgf·m)

7. Replace the engine oil fill cap.

Start the engine. The oil pressure indicator should go out within 5 seconds. If it does not, turn off the engine, and check your work.

8. Let the engine run for several minutes, then check the drain bolt and oil filter for leaks.

9. Turn off the engine and let it sit for several minutes, then check the oil level on the dipstick. If necessary, add more oil.

**NOTICE**

Improper disposal of engine oil can be harmful to the environment. If you change your own oil, please dispose of the used oil properly. Put it in a sealed container and take it to a recycling center. Do not discard it in a trash bin or dump it on the ground.
Adding Engine Coolant

If the coolant level in the reserve tank is at or below the MIN line, add coolant to bring it up to the MAX line. Inspect the cooling system for leaks.

Always use Honda Long-life Antifreeze/Coolant Type 2. This coolant is pre-mixed with 50 percent antifreeze and 50 percent water. Never add straight antifreeze or plain water.

If Honda antifreeze/coolant is not available, you may use another major-brand non-silicate coolant as a temporary replacement. Make sure it is a high-quality coolant recommended for aluminum engines. Continued use of any non-Honda coolant can result in corrosion, causing the cooling system to malfunction or fail. Have the cooling system flushed and refilled with Honda antifreeze/coolant as soon as possible.

If the reserve tank is completely empty, you should also check the coolant level in the radiator.

⚠️ WARNING

Removing the radiator cap while the engine is hot can cause the coolant to spray out, seriously scalding you.

Always let the engine and radiator cool down before removing the radiator cap.
1. Make sure the engine and radiator are cool.

2. Relieve any pressure in the cooling system by turning the radiator cap counterclockwise, without pressing down.

3. Remove the radiator cap by pushing down and turning counterclockwise.

4. The coolant level should be up to the base of the filler neck. Add coolant if it is low.

Pour the coolant slowly and carefully so you do not spill any. Clean up any spill immediately; it could damage components in the engine compartment.

5. Put the radiator cap back on, and tighten it fully.

6. Pour coolant into the reserve tank. Fill it halfway between the MAX and MIN marks. Put the cap back on the reserve tank.

Do not add any rust inhibitors or other additives to your vehicle’s cooling system. They may not be compatible with the coolant or engine components.
Check the fluid level in the windshield washer reservoir at least monthly during normal use.

On Canadian models: The low washer level indicator comes on when the level is low (see page 64).

Fill the reservoir with a good-quality windshield washer fluid. This increases the cleaning capability and prevents freezing in cold weather.

When you refill the reservoir, clean the edges of the windshield wiper blades with windshield washer fluid on a clean cloth. This will help to condition the blade edges.

Check the fluid level by removing the cap and looking at the level gauge.

NOTICE
Do not use engine antifreeze or a vinegar/water solution in the windshield washer reservoir. Antifreeze can damage your vehicle’s paint, while a vinegar/water solution can damage the windshield washer pump. Use only commercially-available windshield washer fluid.
Automatic Transmission Fluid

Check the fluid level with the engine at normal operating temperature.

1. Park the vehicle on level ground. Shut off the engine.
2. Remove the dipstick (yellow loop) from the transmission, and wipe it with a clean cloth.
3. Insert the dipstick all the way into the transmission securely as shown in the illustration.
4. Remove the dipstick, and check the fluid level. It should be between the upper and lower marks.
5. If the level is below the lower mark, add fluid into the filler hole to bring it to the upper mark.

Pour the fluid slowly and carefully so you do not spill any. Clean up any spill immediately; it could damage components in the engine compartment.

Always use Honda ATF-Z1 (automatic transmission fluid). If it’s not available, you may use a DEXRON® III automatic transmission fluid as a temporary replacement. However, continued use can affect the shift quality. Have the transmission flushed and refilled with Honda ATF-Z1 by your dealer as soon as it is convenient.

CONTINUED
6. Insert the dipstick all the way back into the transmission securely as shown in the illustration.

If you are not sure how to add fluid, contact your dealer.

Check the fluid level with the transmission at normal operating temperature and the vehicle on level ground. Remove the transmission filler bolt, and carefully feel inside the bolt hole with your finger. The fluid level should be up to the edge of the bolt hole. If it is not, add Honda Manual Transmission Fluid (MTF) until it starts to run out of the hole.

Put a new washer on the filler bolt, then reinstall the filler bolt and tighten it securely.

If Honda MTF is not available, you may use an SAE 10W-30 or 10W-40 viscosity motor oil with the API Certification seal that says “FOR GASOLINE ENGINES” as a temporary replacement. However, motor oil does not contain the proper additives, and continued use can cause stiffer shifting. Replace as soon as it is convenient.

If you are not sure how to check and add fluid, contact your dealer.
Check the brake fluid level in the reservoirs monthly.

Replace the brake fluid according to the time recommendation in the maintenance minder schedule.

Always use Honda Heavy Duty Brake Fluid DOT 3. If it is not available, you should use only DOT 3 or DOT 4 fluid, from a sealed container, as a temporary replacement.

Using any non-Honda brake fluid can cause corrosion and decrease the life of the system. Have the brake system flushed and refilled with Honda Heavy Duty Brake Fluid DOT 3 as soon as possible.

Brake fluid marked DOT 5 is not compatible with your vehicle’s braking system and can cause extensive damage.

The fluid level should be between the MIN and MAX marks on the side of the reservoir. If the level is at or below the MIN mark, your brake system needs attention. Have the brake system inspected for leaks or worn brake pads/shoes.

Brake and Clutch Fluid

Brake Fluid

Clutch Fluid

Manual Transmission only

The fluid level should be between the MIN and MAX marks on the side of the reservoir. If it is not, add brake fluid to bring it up to that level. Use the same fluid specified for the brake system.

A low fluid level can indicate a leak in the clutch system. Have this system inspected as soon as possible.
Headlight Aiming
The headlights were properly aimed when your vehicle was new. If you regularly carry heavy items in the cargo area, readjustment may be required. Adjustments should be done by your dealer or other qualified mechanic.

Replacing a Headlight Bulb
Your vehicle has halogen headlight bulbs. When replacing a bulb, handle it by its base, and protect the glass from contact with your skin or hard objects. If you touch the glass, clean it with denatured alcohol and a clean cloth.

**NOTICE**
Halogen headlight bulbs get very hot when lit. Oil, perspiration, or a scratch on the glass can cause the bulb to overheat and shatter.

1. To change the bulb on the driver’s side, start the engine, turn the steering wheel all the way to the right, then turn off the engine. To change the bulb on the passenger’s side, turn the steering wheel to the left.

2. Use a flat-tip screwdriver to remove the holding clip from the inner fender, then pull the inner fender cover back.
3. Remove the electrical connector from the bulb by pulling the connector straight back.

4. Remove the rubber weather seal by pulling on the tab.

5. Unclip the end of the hold-down wire from its slot. Pivot the wire out of the way, then remove the bulb.

6. Install the new bulb into the hole, making sure the tabs are in their slots. Pivot the hold-down wire back in place, and clip the end into the slot.

7. Make sure that the hold-down wire is installed properly and securely. You can check its installation from the inspection window on the headlight assembly.

8. Install the rubber seal over the back of the headlight assembly.

9. Push the electrical connector onto the new bulb. Make sure it is connected securely. Turn on the headlights to test the new bulb.

10. Reinstall the inner fender cover. Then reinstall the holding clip, and lock it in place by pushing on its center.
Replacing a Parking Light/Front Side Marker Bulb and a Turn Signal Light Bulb

1. To change the bulb on the driver's side, start the engine, turn the steering wheel all the way to the right, then turn off the engine. To change the bulb on the passenger’s side, turn the steering wheel to the left.

2. Use a flat-tip screwdriver to remove the holding clip from the inner fender, then pull the inner fender cover back.

3. Remove the socket by turning it one-quarter turn counterclockwise.

4. Pull the bulb straight out of its socket. Push the new bulb straight into the socket until it bottoms.

5. Reinstall the socket into the light assembly by turning it clockwise until it locks.

6. Turn on the lights to make sure the new bulb is working.

7. Reinstall the inner fender cover. Then reinstall the holding clip, and lock it in place by pushing on its center.
Replacing a Fog Light Bulb
On Sport model

The fog lights use halogen bulbs. When replacing a bulb, handle it carefully. See page 186 for more information.

1. Use a Phillips-head screwdriver to remove the screw.

2. To remove the fog light assembly, slide it inward, then carefully pull it out of the bumper.

3. Remove the electrical connector from the bulb by squeezing the connector to unlock the tab, then slide the connector off the bulb.

4. Remove the bulb by turning it about one-quarter turn counterclockwise.

5. Insert the new bulb into the hole, and turn it one-quarter turn clockwise to lock it in place.

6. Push the electrical connector back onto the bulb. Make sure it is on all the way.

7. Turn on the fog lights to test the new bulb.

8. Reinstall the fog light assembly, then tighten the screw.
Replacing Rear Bulbs

1. Open the tailgate. Place a cloth on the edge of the light assembly cover. Remove the cover by carefully prying in the notch on its middle edge with a flat-tip screwdriver.

2. Determine which of the four bulbs is burned out: stop/taillight, back-up light, turn signal light, or taillight.

3. Remove the socket by turning it one-quarter turn counterclockwise.

4. Remove the burned out bulb from the socket by pulling it straight out of its socket.

5. Install the new bulb in the socket.

6. Turn on the lights to make sure the new bulb is working.

7. Reinstall the socket into the light assembly by turning it clockwise until it locks.

8. Reinstall the light assembly cover.
Replacing a High-mount Brake Light Bulb

1. Open the tailgate. Remove the light assembly cover by pushing in the tabs on both sides and pulling the cover off.

2. Remove the socket from the light assembly by turning it one-quarter turn counterclockwise.

3. Pull the bulb straight out of its socket. Push the new bulb straight into the socket until it bottoms.

4. Press the brake pedal to make sure the new bulb is working.

5. Put the socket back into the light assembly, and turn it clockwise to lock it in place.

6. Put the cover back on the light assembly. Push it in until it locks in place.
If your seat belts get dirty, use a soft brush with a mixture of mild soap and warm water to clean them. Do not use bleach, dye, or cleaning solvents. Let the belts air-dry before you use the vehicle.

Dirt build-up in the loops of the seat belt anchors can cause the belts to retract slowly. Wipe the insides of the loops with a clean cloth dampened in mild soap and warm water or isopropyl alcohol.

If your vehicle is equipped with genuine Honda floor mats, the mats hook over floor mat anchors. This keeps the floor mats from sliding forward and possibly interfering with the pedals or making the front passenger’s weight sensors ineffective.
If you remove a floor mat, make sure to re-anchor it when you put it back in your vehicle.

A non-Honda floor mat may not fit your vehicle properly. This could prevent the proper operation of the folding rear seats and the passenger’s seat weight sensors. We recommend using genuine Honda floor mats. Do not put additional floor mats on top of the anchored mats.

**NOTICE**

Your vehicle is equipped with an antenna at the rear of the roof. Before using a “drive-through” car wash, remove the antenna by unscrewing it by hand. This prevents the antenna from being damaged by the car wash brushes.
Dust and Pollen Filter

On models with A/C
This filter removes the dust and pollen that is brought in from the outside through the heating and cooling system.

Have your dealer replace the filter when this service is indicated by a maintenance message on the information display. It should be replaced every 15,000 miles (24,000 km) if you drive primarily in urban areas that have high concentrations of soot in the air, or if the flow from the heating and cooling system becomes less than usual.

Wiper Blades

Check the condition of the wiper blades at least every six months. Replace them if you find signs of cracking in the rubber, areas that are getting hard, or if they leave streaks and unwiped areas when used.

To replace a front wiper blade:

1. Raise each wiper arm off the windshield, lifting the driver's side first, then the passenger's side.

**NOTICE**

Do not open the hood when the wiper arms are raised, or you will damage the hood and wiper arms.
2. Disconnect the blade assembly from the wiper arm:
   - Press and hold the lock tab.
   - Slide the blade assembly toward the lock tab until it releases from the wiper arm.

When replacing a wiper blade, make sure not to drop the wiper blade or wiper arm down on the windshield.

3. Remove the blade from the blade assembly:
   - Find the side of the blade labeled “LOCK.” This is the side you pull out.
   - Pull back the end of the blade assembly on the “LOCK” side of the blade. Then grab the end of the blade, and slide it out.

To avoid damaging or bending the blade assembly, do not pull its end with too much force.

4. Examine the new wiper blades. If they have no plastic or metal reinforcement along the back edge, remove the metal reinforcement strips from the old wiper blade, and install them in the slots along the edge of the new blade.

CONTINUED
5. Install the new blade onto the blade assembly:
   - Pull back either end of the blade assembly.
   - Place the side of the blade not labeled “LOCK” on the end of the blade assembly, and slide the blade onto the assembly until it is fully installed.

6. Slide the wiper blade assembly onto the wiper arm. Make sure it locks in place.

7. Make sure the blade is completely installed and that its edge is not bunched up.

8. Lower the wiper arm down against the windshield, the passenger’s side first, then the driver’s side.

To replace the rear wiper blade:

1. Raise the wiper arm off the glass.
2. Slide the blade out of the wiper arm.
3. Examine the new wiper blade. If it has no plastic or metal reinforcement along the back edge, remove the metal reinforcement strips from the old wiper blade and install them in the slots along the edge of the new blade.
4. Slide the new blade into the wiper arm. Make sure it is engaged in the slot along its full length.
5. Lower the wiper arm.
Wheels
Clean the wheels as you would the rest of the exterior. Wash them with the same solution, and rinse them thoroughly.

If equipped
Aluminum alloy wheels have a protective clear-coat that keeps the aluminum from corroding and tarnishing. Cleaning the wheels with harsh chemicals (including some commercial wheel cleaners) or a stiff brush can damage the clear-coat. To clean the wheels, use a mild detergent and a soft brush or sponge.

Tires
To safely operate your vehicle, your tires must be the proper type and size, in good condition with adequate tread, and correctly inflated.

The following pages give more detailed information on how to take care of your tires and what to do when they need to be replaced.

⚠️ WARNING ⚠️

Using tires that are excessively worn or improperly inflated can cause a crash in which you can be seriously hurt or killed.

Follow all instructions in this owner's manual regarding tire inflation and maintenance.

Inflation Guidelines
Keeping the tires properly inflated provides the best combination of handling, tread life, and riding comfort.

- Underinflated tires wear unevenly, adversely affect handling and fuel economy, and are more likely to fail from being overheated.
- Overinflated tires can make your vehicle ride more harshly, are more prone to damage from road hazards, and wear unevenly.

We recommend that you visually check your tires every day. If you think a tire might be low, check it immediately with a tire gauge.
Use a gauge to measure the air pressure in each tire at least once a month. Even tires that are in good condition may lose 1 to 2 psi (10 to 20 kPa, 0.1 to 0.2 kgf/cm²) per month. Remember to check the spare tire at the same time.

Check the air pressures when the tires are cold. This means the vehicle has been parked for at least 3 hours, or driven less than 1 mile (1.6 km). Add or release air, if needed, to match the recommended cold tire pressures.

If you check air pressures when the tires are hot (driven for several miles), you will see readings 4 to 6 psi (30 to 40 kPa, 0.3 to 0.4 kgf/cm²) higher than the cold readings. This is normal. Do not let air out to match the recommended cold air pressure. The tire will be underinflated.

You should get your own tire pressure gauge and use it whenever you check your tire pressures. This will make it easier for you to tell if a pressure loss is due to a tire problem and not due to a variation between gauges.

While tubeless tires have some ability to self-seal if they are punctured, you should look closely for punctures if a tire starts losing pressure.

Recommended Tire Pressures
The following charts show the recommended cold tire pressures for most normal and high-speed driving conditions.

**All models except Sport**

<table>
<thead>
<tr>
<th>Tire Size</th>
<th>Cold Tire Pressure</th>
</tr>
</thead>
<tbody>
<tr>
<td>P175/55R14 81S</td>
<td>Front/Rear: 32 psi (220 kPa, 2.2 kgf/cm²)</td>
</tr>
</tbody>
</table>

**Sport model**

<table>
<thead>
<tr>
<th>Tire Size</th>
<th>Cold Tire Pressure</th>
</tr>
</thead>
<tbody>
<tr>
<td>P195/55R15 84H</td>
<td>Front/Rear: 32 psi (220 kPa, 2.2 kgf/cm²)</td>
</tr>
</tbody>
</table>

The compact spare tire pressure is: 60 psi (420 kPa, 4.2 kgf/cm²)

For convenience, the recommended tire sizes and cold tire pressures are on a label on the driver’s doorjamb. For additional information about your tires, see page 236.
Tire Inspection
Every time you check inflation, you should also examine the tires for damage, foreign objects, and wear.

You should look for:
- Bumps or bulges in the tread or side of the tire. Replace the tire if you find either of these conditions.
- Cuts, splits, or cracks in the side of the tire. Replace the tire if you can see fabric or cord.
- Excessive tread wear.

Tire Maintenance
In addition to proper inflation, correct wheel alignment helps to decrease tire wear. If you find a tire is worn unevenly, have your dealer check the wheel alignment.

Have your dealer check the tires if you feel a consistent vibration while driving. A tire should always be rebalanced if it is removed from the wheel. When you have new tires installed, make sure they are balanced. This increases riding comfort and tire life. For best results, have the installer perform a dynamic balance.

**NOTICE**

On vehicles with aluminum wheels, improper wheel weights can damage your vehicle’s wheels. Use only Honda wheel weights for balancing.
It is best to replace all four tires at the same time. If that is not possible or necessary, replace the two front tires or two rear tires as a pair. Replacing just one tire can seriously affect your vehicle’s handling.

Mixing radial and bias-ply tires on your vehicle can reduce braking ability, traction, and steering accuracy. Using tires of a different size or construction can cause the ABS to work inconsistently.

The ABS works by comparing the speed of the wheels. When replacing tires, use the same size originally supplied with the vehicle. Tire size and construction can affect wheel speed and may cause the system to activate.

It is best to replace all four tires at the same time. If that is not possible or necessary, replace the two front tires or two rear tires as a pair. Replacing just one tire can seriously affect your vehicle’s handling.

Mixing radial and bias-ply tires on your vehicle can reduce braking ability, traction, and steering accuracy. Using tires of a different size or construction can cause the ABS to work inconsistently.

The ABS works by comparing the speed of the wheels. When replacing tires, use the same size originally supplied with the vehicle. Tire size and construction can affect wheel speed and may cause the system to activate.
**WARNING**

Installing improper tires on your vehicle can affect handling and stability. This can cause a crash in which you can be seriously hurt or killed.

Always use the size and type of tires recommended in this owner's manual.

---

**Wheel and Tire Specifications**

**Wheels:**
- *All models except Sport*
  - 14 x 5 1/2JJ
  - Sport model
  - 15 x 6 JJ

**Tires:**
- *All models except Sport*
  - P175/65R14 81S
  - Sport model
  - P195/55R15 84H

See page 234 for DOT tire quality grading information, and page 236 for tire size information.

---

**Winter Driving**

Tires marked “M + S” or “All Season” on the sidewall have an all-weather tread design suitable for most winter driving conditions.

For the best performance in snowy or icy conditions, you should install snow tires or tire chains. They may be required by local laws under certain conditions.

**Snow Tires**

If you mount snow tires on your vehicle, make sure they are radial tires of the same size and load range as original tires. Mount snow tires on all four wheels. The traction provided by snow tires on dry roads may be lower than your original tires. Check with the tire dealer for maximum speed recommendations.
When installing cables, follow the manufacturer’s instructions, and mount them as tight as you can. Make sure they are not contacting the brake lines or suspension. Drive slowly with them installed. If you hear them coming into contact with the body or chassis, stop and investigate. Remove them as soon as you begin driving on cleared roads.

*Tire Chains*

Because your vehicle has limited tire clearance, mount only SAE Class “S” cable-type traction devices, with rubber chain tensioners, on the front tires. Use traction devices only when required by driving conditions or local laws. Make sure they are the correct size for your tires. Metal link-type “chains” should not be used.

When installing cables, follow the manufacturer’s instructions, and mount them as tight as you can. Make sure they are not contacting the brake lines or suspension. Drive slowly with them installed. If you hear them coming into contact with the body or chassis, stop and investigate. Remove them as soon as you begin driving on cleared roads.

**NOTICE**

*Traction devices that are the wrong size or improperly installed can damage your vehicle’s brake lines, suspension, body, and wheels. Stop driving if they are hitting any part of the vehicle.*
If your vehicle’s battery is disconnected, or goes dead, the audio system will disable itself. The next time you turn on the radio, you will see “ENTER CODE” in the frequency display. Use the preset buttons to enter the code (see page 124).

If your vehicle’s battery is disconnected, or goes dead, the time setting is lost. To reset the time, see page 125.

This stops, wash it off with plain water. Dry off the battery with a cloth or paper towel. Coat the terminals with grease to help prevent future corrosion.

If additional battery maintenance is needed, see your dealer or a qualified technician.

**WARNING:** Battery posts, terminals, and related accessories contain lead and lead compounds. 

**Wash your hands after handling.**

If you need to connect the battery to a charger, disconnect both cables to prevent damaging your vehicle’s electrical system. Always disconnect the negative (−) cable first, and reconnect it last.

If your vehicle’s battery is disconnected, or goes dead, the time setting is lost. To reset the time, see page 125.

**WARNING**

The battery gives off explosive hydrogen gas during normal operation.

A spark or flame can cause the battery to explode with enough force to kill or seriously hurt you.

Wear protective clothing and a face shield, or have a skilled mechanic do the battery maintenance.

Check the condition of the battery monthly by looking at the test indicator window. The label on the battery explains the test indicator’s colors. The test indicator window’s location differs according to the battery manufacturer.

Check the terminals for corrosion (a white or yellowish powder). To remove it, cover the terminals with a solution of baking soda and water. It will bubble up and turn brown. When

Battery posts, terminals, and related accessories contain lead and lead compounds.

If you need to connect the battery to a charger, disconnect both cables to prevent damaging your vehicle’s electrical system. Always disconnect the negative (−) cable first, and reconnect it last.
Vehicle Storage

If you need to park your vehicle for an extended period (more than 1 month), there are several things you should do to prepare it for storage. Proper preparation helps prevent deterioration and makes it easier to get your vehicle back on the road. If possible, store your vehicle indoors.

- Fill the fuel tank.
- Change the engine oil and filter.
- Wash and dry the exterior completely.
- Clean the interior. Make sure the carpeting, floor mats, etc., are completely dry.
- Leave the parking brake off. Put the transmission in reverse (manual) or Park (automatic).

- Block the rear wheels.
- If the vehicle is to be stored for a longer period, it should be supported on jackstands so the tires are off the ground.
- Leave one window open slightly (if the vehicle is being stored indoors).
- Disconnect the battery.
- Support the front and rear wiper blade arms with a folded towel or rag so they do not touch the windshield.
- To minimize sticking, apply a silicone spray lubricant to all door and tailgate seals. Also, apply a vehicle body wax to the painted surfaces that mate with the door and tailgate seals.
- Cover the vehicle with a “breathable” cover, one made from a porous material such as cotton. Non-porous materials, such as plastic sheeting, trap moisture, which can damage the paint.
- If possible, periodically run the engine until it reaches full operating temperature (the cooling fans cycle on and off twice). Preferably, do this once a month.
This section covers the more common problems that motorists experience with their vehicles. It gives you information about how to safely evaluate the problem and what to do to correct it. If the problem has stranded you on the side of the road, you may be able to get going again. If not, you will also find instructions on getting your vehicle towed.

Compact Spare Tire

Use the compact spare tire as a temporary replacement only. Get your regular tire repaired or replaced, and put it back on your vehicle as soon as you can.

Check the inflation pressure of the compact spare tire every time you check the other tires. It should be inflated to:

60 psi (420 kPa, 4.2 kgf/cm²)

Follow these precautions:

- Never exceed 50 mph (80 km/h).
- This tire gives a harsher ride and less traction on some road surfaces. Use greater caution while driving.
- Do not mount tire chains on the compact spare tire.
- Do not use your compact spare tire on another vehicle unless it is the same make and model.

Replace the tire when you can see the tread wear indicator bars. The replacement should be the same size and design tire, mounted on the same wheel. The spare tire is not designed to be mounted on a regular wheel, and the spare wheel is not designed for mounting a regular tire.
If you have a flat tire while driving, stop in a safe place to change it. Drive slowly along the shoulder until you get to an exit or an area to stop that is far away from the traffic lanes.

**WARNING**

The vehicle can easily roll off the jack, seriously injuring anyone underneath.

Follow the directions for changing a tire exactly, and never get under the vehicle when it is supported only by the jack.

1. Park the vehicle on firm, level, and non-slippery ground. Put the transmission in Park (automatic) or reverse (manual). Apply the parking brake.

2. Turn on the hazard warning lights, and turn the ignition switch to the LOCK (0) position. Have all passengers get out of the vehicle while you change the tire.

3. Open the tailgate. Raise the cargo area floor lid by lifting it up with the strap that has a loop. To keep the floor lid open, hook the loop of the strap to a leg of the rear center head restraint.

4. Take the tool kit out of the spare tire.

CONTINUED
5. Take the jack out of the cargo area.

Turn the jack’s end bracket counterclockwise to loosen it, then remove the jack by lifting it straight up.

6. Unscrew the wing bolt and take the spare tire out of its well.

7. On all models except Sport, remove the wheel cover by carefully prying under its edge with the flat tip of the extension.

8. Loosen each wheel nut 1/2 turn with the wheel nut wrench.
9. Place the jack under the jacking point nearest the tire you need to change. It is pointed to by a △ mark molded into the underside of the body (Sport model). Turn the end bracket clockwise until the top of the jack contacts the jacking point. Make sure the jacking point tab is resting in the jack notch.

10. Use the extension and the wheel nut wrench as shown to raise the vehicle until the flat tire is off the ground.

11. Remove the wheel nuts, then remove the flat tire. Handle the wheel nuts carefully; they may be hot from driving. Place the flat tire on the ground with the outside surface facing up.

12. Before mounting the spare tire, wipe any dirt off the mounting surface of the wheel and hub with a clean cloth. Wipe the hub carefully; it may be hot from driving.
13. Put on the spare tire. Put the wheel nuts back on finger-tight, then tighten them in a crisscross pattern with the wheel nut wrench until the wheel is firmly against the hub. Do not try to tighten the wheel nuts fully.

14. Lower the vehicle to the ground, and remove the jack.

15. Tighten the wheel nuts securely in the same crisscross pattern. Have the wheel nut torque checked at the nearest automotive service facility. Tighten the wheel nuts to: 80 lbf·ft (108 N·m, 11 kgf·m)

16. *On Sport model:* Remove the center cap before storing the flat tire.

17. Place the flat tire face down in the spare tire well.

18. Secure the flat tire by screwing the wing bolt back into its hole.
19. Store the jack. Place the tool kit in the center of the flat tire.

**WARNING**

Loose items can fly around the interior in a crash and could seriously injure the occupants.

Store the wheel, jack, and tools securely before driving.

20. Store the wheel cover or center cap in the cargo area. Make sure it will not get scratched or damaged.

21. Remove the strap loop from the leg of the head restraint, then lower the floor lid, and close the tailgate.

2. Align the valve mark on the wheel cover to the tire valve on the wheel, then install the wheel cover.

_All models except Sport_

1. Make sure the wire support ring is hooked into the clips around the edge of the wheel cover.
Changing a Flat Tire, If the Engine Won’t Start

If the Engine Won't Start
Diagnosing why the engine won’t start falls into two areas, depending on what you hear when you turn the ignition switch to the START (III) position:

- You hear nothing, or almost nothing. The engine's starter motor does not operate at all, or operates very slowly.
- You can hear the starter motor operating normally, or the starter motor sounds like it is spinning faster than normal, but the engine does not start up and run.

Nothing Happens or the Starter Motor Operates Very Slowly
When you turn the ignition switch to the START (III) position, you do not hear the normal noise of the engine trying to start. You may hear a clicking sound or series of clicks, or nothing at all. Check these things:

- Check the transmission interlock. If you have a manual transmission, the clutch pedal must be pushed all the way to the floor or the starter will not operate. With an automatic transmission, it must be in Park or neutral.
- Turn the ignition switch to the ON (II) position. Turn on the headlights, and check their brightness. If the headlights are very dim or do not come on at all, the battery is discharged. See Jump Starting on page 214.

3. Make sure the wire support ring is on the outer side of the tire valve as shown.
If the Engine Won’t Start

- Turn the ignition switch to the START (III) position. If the headlights do not dim, check the condition of the fuses. If the fuses are OK, there is probably something wrong with the electrical circuit for the ignition switch or starter motor. You will need a qualified technician to determine the problem. See Emergency Towing on page 226.

If the headlights dim noticeably or go out when you try to start the engine, either the battery is discharged or the connections are corroded. Check the condition of the battery and terminal connections (see page 203). You can then try jump starting the vehicle from a booster battery (see page 214).

The Starter Operates Normally
In this case, the starter motor’s speed sounds normal, or even faster than normal, when you turn the ignition switch to the START (III) position, but the engine does not run.

- Are you using a properly coded key? An improperly coded key will cause the immobilizer system indicator in the instrument panel to blink rapidly (see page 76).

- Are you using the proper starting procedure? Refer to Starting the Engine on page 148.

- Do you have fuel? Check the fuel gauge; the low fuel indicator may not be working.

- There may be an electrical problem, such as no power to the fuel pump. Check all the fuses (see page 221).

If you find nothing wrong, you will need a qualified technician to find the problem. See Emergency Towing on page 226.

Do you have fuel? Check the fuel gauge; the low fuel indicator may not be working.

There may be an electrical problem, such as no power to the fuel pump. Check all the fuses (see page 221).

If you find nothing wrong, you will need a qualified technician to find the problem. See Emergency Towing on page 226.
Although this seems like a simple procedure, you should take several precautions.

**WARNING**

A battery can explode if you do not follow the correct procedure, seriously injuring anyone nearby.

Keep all sparks, open flames, and smoking materials away from the battery.

You cannot start your vehicle with an automatic transmission by pushing or pulling it.

To Jump Start Your Vehicle:

1. Open the hood, and check the physical condition of the battery. In very cold weather, check the condition of the electrolyte. If it seems slushy or frozen, do not try jump starting until it thaws.

2. Turn off all the electrical accessories: heater, A/C (if equipped), audio system, lights, etc. Put the transmission in neutral (M/T) or Park (A/T), and set the parking brake.

The numbers in the illustration show you the order to connect the jumper cables.
3. Connect one jumper cable to the positive (+) terminal on your battery. Connect the other end to the positive (+) terminal on the booster battery.

4. Connect the second jumper cable to the negative (−) terminal on the booster battery. Connect the other end to the stay as shown. Do not connect this jumper cable to any other part of the engine.

5. If the booster battery is in another vehicle, have an assistant start that vehicle and run it at a fast idle.

6. Start your vehicle. If the starter motor still operates slowly, check that the jumper cables have good metal-to-metal contact.

7. Once your vehicle is running, disconnect the negative cable from your vehicle, then from the booster battery. Disconnect the positive cable from your vehicle, then from the booster battery.

Keep the ends of the jumper cables away from each other and any metal on the vehicle until everything is disconnected. Otherwise, you may cause an electrical short.
The high temperature indicator should be off under most conditions. If the engine coolant temperature gets higher than normal, the indicator will blink. If it stays on, you should determine the reason (hot day, driving up a steep hill, etc.).

If the vehicle overheats, you should take immediate action. The only indication may be the high temperature indicator blinking or remaining on. Or you may see steam or spray coming from under the hood.

**WARNING**

Steam and spray from an overheated engine can seriously scald you.

Do not open the hood if steam is coming out.

1. Safely pull to the side of the road. Put the transmission in neutral (M/T) or Park (A/T), and set the parking brake. Turn off all accessories, and turn on the hazard warning indicators.

2. If you see steam and/or spray coming from under the hood, turn off the engine. Wait until you see no more signs of steam or spray, then open the hood.

3. If you do not see steam or spray, leave the engine running, and check the high temperature indicator. If the high heat is due to overloading, the engine should start to cool down almost immediately. If it does, wait until the high temperature indicator goes off, then continue driving.

4. If the high temperature indicator stays on, turn off the engine.

Driving with the high temperature indicator on can cause serious damage to your engine.
5. Look for any obvious coolant leaks, such as a split radiator hose. Everything is still extremely hot, so use caution. If you find a leak, it must be repaired before you continue driving (see Emergency Towing on page 226).

6. If you don’t find an obvious leak, check the coolant level in the radiator reserve tank. Add coolant if the level is below the MIN mark.

7. If there was no coolant in the reserve tank, you may need to add coolant to the radiator. Let the engine cool down until the high temperature indicator goes off before checking the radiator.

8. Using gloves or a large heavy cloth, turn the radiator cap counterclockwise, without pushing down, to the first stop. After the pressure releases, push down on the cap, and turn it until it comes off.

9. Start the engine, and set the temperature control dial to maximum heat. Add coolant to the radiator up to the base of the filler neck. If you do not have the proper coolant mixture available, you can add plain water. Remember to have the cooling system drained and refilled with the proper mixture as soon as you can.

10. Put the radiator cap back on tightly. Run the engine, and check the high temperature indicator. If it begins to blink or comes on again, the engine needs repair (see Emergency Towing on page 226).

11. If the temperature stays normal, check the coolant level in the radiator reserve tank. If it has gone down, add coolant to the MAX mark. Put the cap back on tightly.
Let the vehicle sit for a minute.
Open the hood, and check the oil level (see page ). An engine very low on oil can lose pressure during cornering and other driving maneuvers.
If necessary, add oil to bring the level back to the full mark on the dipstick (see page ).

If the charging system indicator comes on brightly when the engine is running, the battery is not being charged. Immediately turn off all electrical accessories. Try not to use other electrically operated controls such as the power windows. Keep the engine running; starting the engine will discharge the battery rapidly.
Go to a service station or garage where you can get technical assistance.

1. Safely pull off the road, and shut off the engine. Turn on the hazard warning lights.
2. Let the vehicle sit for a minute. Open the hood, and check the oil level (see page ). An engine very low on oil can lose pressure during cornering and other driving maneuvers.
3. If necessary, add oil to bring the level back to the full mark on the dipstick (see page ).
4. Start the engine, and watch the oil pressure indicator. If it does not go out within 10 seconds, turn off the engine. There is a mechanical problem that needs to be repaired before you can continue driving (see Emergency Towing on page ).

**Low Oil Pressure Indicator**
This indicator should never come on when the engine is running. If it starts flashing or stays on, the oil pressure has dropped very low or lost pressure. Serious engine damage is possible, and you should take immediate action.

**Charging System Indicator**
If the charging system indicator comes on brightly when the engine is running, the battery is not being charged.

Running the engine with low oil pressure can cause serious mechanical damage almost immediately. Turn off the engine as soon as you can safely get the vehicle stopped.
If this indicator comes on while driving, it means one of the engine’s emissions control systems may have a problem. Even though you may feel no difference in your vehicle’s performance, it can reduce your fuel economy and cause increased emissions. Continued operation may cause serious damage.

If you have recently refueled your vehicle, the indicator coming on could be due to a loose or missing fuel fill cap. You will also see a “CHECK FUEL CAP” message on the information display. Tighten the cap until it clicks at least once. Tightening the cap will not turn the indicator off immediately; it can take several days of normal driving.

If the indicator comes on repeatedly, even though it may go off as you continue driving, have your vehicle checked by a dealer as soon as possible.

**NOTICE**

*If you keep driving with the malfunction indicator lamp on, you can damage your vehicle’s emissions controls and engine. Those repairs may not be covered by your vehicle’s warranties.*

If your vehicle has an automatic transmission, the malfunction indicator lamp may also come on with the “D” indicator.

**Readiness Codes**

Your vehicle has certain “readiness codes” that are part of the on-board diagnostics for the emissions systems. In some states, part of the emissions testing is to make sure these codes are set. If they are not set, the test cannot be completed.

If the battery in your vehicle has been disconnected or gone dead, these codes are erased. It can take several days of driving under various conditions to set the codes again.

To check if they are set, turn the ignition switch to the ON (II) position, without starting the engine. The malfunction indicator lamp will come on for 20 seconds. If it then goes off, the readiness codes are set. If it blinks five times, the readiness codes are not set. If possible, do not take your vehicle for a state emissions test until the readiness codes are set. Refer to **State Emissions Testing** for more information (see page 240).

If you keep driving with the malfunction indicator lamp on, you can damage your vehicle’s emissions controls and engine. Those repairs may not be covered by your vehicle’s warranties.
However, if the brake pedal does not feel normal, you should take immediate action. A problem in one part of the system's dual circuit design will still give you braking at two wheels. You will feel the brake pedal go down much farther before the vehicle begins to slow down, and you will have to press harder on the pedal.

Slow down by shifting to a lower gear, and pull to the side of the road when it is safe. Because of the long distance needed to stop, it is hazardous to drive the vehicle. You should have it towed and repaired as soon as possible (see Emergency Towing on page 226).

If the fluid level is low, take your vehicle to a dealer, and have the brake system inspected for leaks or worn brake pads/shoes.

If the ABS indicator comes on with the brake system indicator, have your vehicle inspected by your dealer immediately.
The vehicle's fuses are contained in three fuse boxes.

The primary under-hood fuse box is in the engine compartment on the driver's side. To open it, push the tabs as shown.

The secondary fuse box is on the positive terminal of the battery.

The interior fuse box is behind the driver's coin tray. To access it, remove the tray by turning the dial counterclockwise then pulling it toward you. To install the coin tray, line up the tabs on the bottom, pivot the tray up to engage its side clips, then turn the dial clockwise.
Checking and Replacing Fuses
If something electrical in your vehicle stops working, check for a blown fuse first. Determine from the chart on pages 224 and 225, or the diagram on the fuse box lid, which fuse or fuses control that device. Check those fuses first, but check all the fuses before deciding that a blown fuse is the cause. Replace any blown fuses, and check if the device works.

1. Turn the ignition switch to the LOCK (0) position. Make sure the headlights and all other accessories are off.

2. Remove the cover from the fuse box.

3. Check each of the large fuses in the under-hood fuse boxes by looking through the top at the wire inside. Removing these fuses requires a Phillips-head screwdriver.

4. Check the smaller fuses in the primary under-hood fuse box and all the fuses in the interior fuse box by pulling out each one with the fuse puller provided in the interior fuse box.
If the replacement fuse of the same rating blows in a short time, there is probably a serious electrical problem in your vehicle. Leave the blown fuse in that circuit and have your vehicle checked by a qualified mechanic.

If the radio fuse is removed, the audio system will disable itself. The next time you turn on the radio you will see “ENTER CODE” in the frequency display. Use the preset buttons to enter the five-digit code (see page 124).

If you cannot drive the vehicle without fixing the problem, and you do not have a spare fuse, take a fuse of the same rating or a lower rating from one of the other circuits. Make sure you can do without that circuit temporarily (such as the accessory power socket or radio).

If you replace the blown fuse with a spare fuse that has a lower rating, it might blow out again. This does not indicate anything wrong. Replace the fuse with one of the correct rating as soon as you can.

Replacing a fuse with one that has a higher rating greatly increases the chances of damaging the electrical system. If you do not have a replacement fuse with the proper rating for the circuit, install one with a lower rating.

6. If the replacement fuse of the same rating blows in a short time, there is probably a serious electrical problem in your vehicle. Leave the blown fuse in that circuit and have your vehicle checked by a qualified mechanic.

If you cannot drive the vehicle without fixing the problem, and you do not have a spare fuse, take a fuse of the same rating or a lower rating from one of the other circuits. Make sure you can do without that circuit temporarily (such as the accessory power socket or radio).

If you replace the blown fuse with a spare fuse that has a lower rating, it might blow out again. This does not indicate anything wrong. Replace the fuse with one of the correct rating as soon as you can.

Look for a blown wire inside the fuse. If it is blown, replace it with one of the spare fuses of the same rating or lower.

* : If equipped
Emergency Towing

If your vehicle needs to be towed, call a professional towing service or organization. Never tow your vehicle with just a rope or chain. It is very dangerous.

There are two ways to tow your vehicle:

**Flat-bed Equipment** — The operator loads your vehicle on the back of a truck. **This is the best way to transport your vehicle.**

**Wheel-lift Equipment** — The tow truck uses two pivoting arms that go under the tires (front) and lift them off the ground. The other two tires remain on the ground. **This is an acceptable way to tow your vehicle.**

If, due to damage, your vehicle must be towed with the front wheels on the ground, do this:

**Manual transmission:**
- Release the parking brake.
- Shift the transmission to neutral.
- Leave the ignition switch in the ACCESSORY (I) position so the steering wheel does not lock.

**Automatic transmission:**
- Release the parking brake.
- Start the engine.
- Shift to D, then to N.
- Turn off the engine.
- Leave the ignition switch in the ACCESSORY (I) position so the steering wheel does not lock.

**NOTICE**

Improper towing preparation will damage the transmission. Follow the above procedure exactly. If you cannot shift the transmission or start the engine (automatic transmission), your vehicle must be transported with the front wheels off the ground.

With the front wheels on the ground, do not tow the vehicle more than 50 miles (80 km), and keep the speed below 35 mph (55 km/h).
If your vehicle gets stuck in sand, mud, or snow, call a towing service to pull it out (see page 226).

For very short distances, such as freeing the vehicle, you can use the detachable towing hook that mounts on the anchor in the front bumper.

To use the towing hook:
1. Take the towing hook and the extension out of the tool kit in the cargo area.
2. Lift the upper part of the cover from the bumper by pushing the lower part with your finger. Put a cloth into the space behind the upper part of the cover. Using the extension, remove the cover fully.

CONTINUED
If Your Vehicle Gets Stuck

3. Screw the towing hook into the bolt hole behind the bumper, then tighten the hook securely with the extension.

**NOTICE**

To avoid damage to your vehicle, use the towing hook for straight, flat ground towing only. Do not tow at an angle. The tow hook should not be used to tow the vehicle onto a flat bed. Do not use it as a tie down.
The diagrams in this section give you the dimensions and capacities of your vehicle and the locations of the identification numbers. It also includes information you should know about your vehicle's tires and emissions control systems.
Your vehicle has several identifying numbers in various places.

The vehicle identification number (VIN) is the 17-digit number your dealer uses to register your vehicle for warranty purposes. It is also necessary for licensing and insuring your vehicle. The easiest place to find the VIN is on a plate fastened to the top of the dashboard. You can see it by looking through the windshield on the driver’s side. It is also on the certification label attached to the driver’s doorjamb, and is stamped on the engine compartment bulkhead. The VIN is also provided in bar code on the certification label.
The engine number is stamped into the front of the engine block.

The transmission number is on a label on top of the transmission.

*1: All models except Sport
*2: Sport model
The tires on your vehicle meet all U.S. Federal Safety Requirements. All tires are also graded for treadwear, traction, and temperature performance according to Department of Transportation (DOT) standards. The following explains these gradings.

**Uniform Tire Quality Grading**
Quality grades can be found where applicable on the tire sidewall between the tread shoulder and the maximum section width. For example:
- **Treadwear 200**
- **Traction AA**
- **Temperature A**

All passenger car tires must conform to Federal Safety Requirements in addition to these grades.

**Treadwear**
The treadwear grade is a comparative rating based on the wear rate of the tire when tested under controlled conditions on a specified government test course. For example, a tire graded 150 would wear one and one-half (1 1/2) times as well on the government course as a tire graded 100. The relative performance of tires depends upon the actual conditions of their use, however, and may depart significantly from the norm due to variations in driving habits, service practices, and differences in road characteristics and climate.

**Traction — AA, A, B, C**
The traction grades, from highest to lowest, are AA, A, B, and C. Those grades represent the tire’s ability to stop on wet pavement as measured under controlled conditions on specified government test surfaces of asphalt and concrete. A tire marked C may have poor traction performance.

Warning: The traction grade assigned to this tire is based on straight-ahead braking traction tests, and does not include acceleration, cornering, hydroplaning, or peak traction characteristics.
Warning: The temperature grade for this tire is established for a tire that is properly inflated and not overloaded. Excessive speed, underinflation, or excessive loading, either separately or in combination, can cause heat buildup and possible tire failure.

**Temperature — A, B, C**
The temperature grades are A (the highest), B, and C, representing the tire’s resistance to the generation of heat, and its ability to dissipate heat when tested under controlled conditions on a specified indoor laboratory test wheel. Sustained high temperature can cause the material of the tire to degenerate and reduce tire life, and excessive temperature can lead to sudden tire failure. Grade C corresponds to a level of performance that all passenger car tires must meet under the Federal Motor Vehicle Safety Standard No. 109. Grades B and A represent higher levels of performance on the laboratory test wheel than the minimum required by law.
Tire Labeling

The tires that came on your vehicle have a number of markings. Those you should be aware of are described below.

**Tire Size**
Whenever tires are replaced, they should be replaced with tires of the same size. Below is an example of tire size with an explanation of what each component means.

P195/55R15 84H

- **P** — Vehicle type (P indicates passenger vehicle).
- **195** — Tire width in millimeters.
- **55** — Aspect ratio (the tire’s section height as a percentage of its width).
- **R** — Tire construction code (R indicates radial).
- **15** — Rim diameter in inches.

- **84** — Load index (a numerical code associated with the maximum load the tire can carry).
- **H** — Speed symbol (an alphabetical code indicating the maximum speed rating).

**Tire Identification Number**
The tire identification number (TIN) is a group of numbers and letters that look like this example:

DOT B97R FW6X 2202

- **DOT** — This indicates that the tire meets all requirements of the U.S. Department of Transportation.
- **B97R** — Manufacturer’s identification mark.
- **FW6X** — Tire type code.
- **2202** — Date of manufacture.

**Maximum Tire Pressure**
Max Press — The maximum air pressure the tire can hold.

**Maximum Tire Load**
Max Load — The maximum load the tire can carry at maximum air pressure.
The burning of gasoline in your vehicle’s engine produces several by-products. Some of these are carbon monoxide (CO), oxides of nitrogen (NOx), and hydrocarbons (HC). Gasoline evaporating from the tank also produces hydrocarbons. Controlling the production of NOx, CO, and HC is important to the environment. Under certain conditions of sunlight and climate, NOx and HC react to form photochemical “smog.” Carbon monoxide does not contribute to smog creation, but it is a poisonous gas.

The Clean Air Act
The United States Clean Air Act* sets standards for automobile emissions. It also requires that automobile manufacturers explain to owners how their emissions controls work and what to do to maintain them. This section summarizes how the emissions controls work.

* In Canada, Honda vehicles comply with the Canadian emission requirements, as specified in an agreement with Environment Canada, at the time they are manufactured.

Crankcase Emissions Control System
Your vehicle has a positive crankcase ventilation system. This keeps gasses that build up in the engine’s crankcase from going into the atmosphere. The positive crankcase ventilation valve routes them from the crankcase back to the intake manifold. They are then drawn into the engine and burned.

Evaporative Emissions Control System
As gasoline evaporates in the fuel tank, an evaporative emissions control canister filled with charcoal absorbs the vapor. It is stored in this canister while the engine is off. After the engine is started and warmed up, the vapor is drawn into the engine and burned during driving.

Onboard Refueling Vapor Recovery
The onboard refueling vapor recovery (ORVR) system captures the fuel vapors during refueling. The vapors are adsorbed in a canister filled with activated carbon. While driving, the fuel vapors are drawn into the engine and burned off.
Emissions Controls

Exhaust Emissions Controls
The exhaust emissions controls include four systems: PGM-FI, ignition timing control, exhaust gas recirculation, and three way catalytic converter. These four systems work together to control the engine’s combustion and minimize the amount of HC, CO, and NOx that come out the tailpipe. The exhaust emissions control systems are separate from the crankcase and evaporative emissions control systems.

**PGM-FI System**
The PGM-FI system uses sequential multiport fuel injection. It has three subsystems: air intake, engine control, and fuel control. The powertrain control module (PCM) in automatic transmission vehicles or the engine control module (ECM) in manual transmission vehicles uses various sensors to determine how much air is going into the engine. It then controls how much fuel to inject under all operating conditions.

**Ignition Timing Control System**
This system constantly adjusts the ignition timing, reducing the amount of HC, CO, and NOx produced.

**Exhaust Gas Recirculation (EGR) System**
The exhaust gas recirculation (EGR) system takes some of the exhaust gas and routes it back into the intake manifold. Adding exhaust gas to the air/fuel mixture reduces the amount of NOx produced when the fuel is burned.

**Three Way Catalytic Converter**
The three way catalytic converter is in the exhaust system. Through chemical reactions, it converts HC, CO, and NOx in the engine’s exhaust to carbon dioxide (CO2), nitrogen (N2), and water vapor.

Replacement Parts
The emissions control systems are designed and certified to work together in reducing emissions to levels that comply with the Clean Air Act. To make sure the emissions remain low, you should use only new Honda replacement parts or their equivalent for repairs. Using lower quality parts may increase the emissions from your vehicle.

The emissions control systems are covered by warranties separate from the rest of your vehicle. Read your warranty manual for more information.
The three way catalytic converter contains precious metals that serve as catalysts, promoting chemical reactions to convert the exhaust gasses without affecting the metals. The catalytic converter is referred to as a three-way catalyst, since it acts on HC, CO, and NOx. A replacement unit must be an original Honda part or its equivalent.

The three way catalytic converter must operate at a high temperature for the chemical reactions to take place. It can set on fire any combustible materials that come near it. Park your vehicle away from high grass, dry leaves, or other flammables.

- Keep the engine well maintained.
- Have your vehicle diagnosed and repaired if it is misfiring, backfiring, stalling, or otherwise not running properly.
- Always use unleaded gasoline. Even a small amount of leaded gasoline can contaminate the catalyst metals, making the three way catalytic converter ineffective.
Testing of Readiness Codes

If you take your vehicle for a state emissions test shortly after the battery has been disconnected or gone dead, it may not pass the test. This is because of certain “readiness codes” that must be set in the on-board diagnostics for the emissions systems. These codes are erased when the battery is disconnected, and set again only after several days of driving under a variety of conditions.

If the testing facility determines that the readiness codes are not set, you will be requested to return at a later date to complete the test. If you must get the vehicle retested within the next two or three days, you can condition the vehicle for retesting by doing the following.

- Make sure the gas tank is nearly, but not completely, full (around 3/4).
- Make sure the vehicle has been parked with the engine off for 6 hours or more.
- Make sure the ambient temperature is between 40° and 95°F.
- Without touching the accelerator pedal, start the engine, and let it idle for 20 seconds.
- Keep the vehicle in Park (automatic transmission) or neutral (manual transmission). Increase the engine speed to 2,000 rpm, and hold it there until the temperature gauge rises to at least 1/4 of the scale (about 3 minutes).
- Select a nearby lightly traveled major highway where you can maintain a speed of 50 to 60 mph (80 to 97 km/h) for at least 20 minutes. Drive on the highway in D (A/T) or 5th (M/T). Do not use the cruise control. When traffic allows, drive for 90 seconds without moving the accelerator pedal. (Vehicle speed may vary slightly; this is okay.) If you cannot do this for a continuous 90 seconds because of traffic conditions, drive for at least 30 seconds, then repeat it two more times (for a total of 90 seconds).
- Then drive in city/suburban traffic for at least 10 minutes. When traffic conditions allow, let the vehicle coast for several seconds without using the accelerator pedal or the brake pedal.
- Stop the vehicle, turn off the ignition switch, and leave it off for 30 minutes.

If the testing facility determines the readiness codes are still not set, see your dealer.
## Warranty and Customer Relations

Honda dealership personnel are trained professionals. They should be able to answer all your questions. If you encounter a problem that your dealership does not solve to your satisfaction, please discuss it with the dealership's management. The service manager or general manager can help. Almost all problems are solved in this way.

If you are dissatisfied with the decision made by the dealership's management, contact your Honda Customer Service Office.

When you call or write, please give us this information:

- Vehicle Identification Number (see page 230)
- Name and address of the dealer who services your vehicle
- Date of purchase
- Mileage on your vehicle
- Your name, address, and telephone number
- A detailed description of the problem
- Name of the dealer who sold the vehicle to you
U.S. Owners
Your new vehicle is covered by these warranties:

**New Vehicle Limited Warranty** — covers your new vehicle, except for the battery, emissions control systems, and accessories against defects in materials and workmanship.

**Emissions Control Systems Defects Warranty and Emissions Performance Warranty** — these two warranties cover your vehicle’s emissions control systems. Time, mileage, and coverage are conditional. Please read your warranty booklet for exact information.

**Original Equipment Battery Limited Warranty** — this warranty gives up to 100% credit toward a replacement battery.

**Seat Belt Limited Warranty** — a seat belt that fails to function properly is covered by a limited warranty. Please read your warranty booklet for details.

**Rust Perforation Limited Warranty** — all exterior body panels are covered for rust-through from the inside for the specified time period with no mileage limit.

**Accessory Limited Warranty** — Honda accessories are covered under this warranty. Time and mileage limits depend on the type of accessory and other factors. Please read your warranty booklet for details.

**Replacement Parts Limited Warranty** — covers all Honda replacement parts against defects in materials and workmanship.

**Replacement Battery Limited Warranty** — provides prorated coverage for a replacement battery purchased from your dealer.

**Replacement Muffler Lifetime Limited Warranty** — provides coverage for as long as the purchaser of the muffler owns the vehicle.

Restrictions and exclusions apply to all these warranties. Please read the 2007 Honda warranty information booklet that came with your vehicle for precise information on warranty coverages. Your vehicle’s original tires are covered by their manufacturer. Tire warranty information is in a separate booklet.

Canadian Owners
Please refer to the 2007 warranty manual that came with your vehicle.
If you believe that your vehicle has a defect which could cause a crash or could cause injury or death, you should immediately inform the National Highway Traffic Safety Administration (NHTSA) in addition to notifying American Honda Motor Co., Inc.

If NHTSA receives similar complaints, it may open an investigation, and if it finds that a safety defect exists in a group of vehicles, it may order a recall and remedy campaign. However, NHTSA cannot become involved in individual problems between you, your dealer, or American Honda Motor Co., Inc.

To contact NHTSA, you may call the Vehicle Safety Hotline toll-free at 1-888-327-4236 (TTY: 1-800-424-9153); go to http://www.safercar.gov; or write to: Administrator, NHTSA, 400 Seventh Street, SW., Washington, DC 20590. You can also obtain other information about motor vehicle safety from http://www.safercar.gov.
Authorized Manuals

Purchasing Factory Authorized Manuals (U.S. only)
The publications shown below can be purchased from Helm Incorporated. You can order in any of three ways:
- Detach and mail the order form on the right half of this page
- Call Helm Inc. at 1-800-782-4356 (credit card orders only)
- Go online at www.helminc.com
If you are interested in other years or models, contact Helm Inc. at 1-800-782-4356.

Valid only for sales within the United States. Canadian owners should contact their authorized Honda dealer.

ORDER TOLL FREE: 1-800-782-4356
(NOTE: For Credit Card Holder Orders Only)
Monday-Friday 8:00 A.M. — 6:00 P.M. EST
MINIMUM CREDIT CARD PURCHASE $10.00

Authorized Manuals

OR

By completing this form you can order the materials desired. You can pay by check or money order, or charge to your credit card. Mail to Helm Incorporated at the address shown on the back of the order form.

* Prices are subject to change without notice and without incurring obligation.

** Orders are mailed within 10 days. Please allow adequate time for delivery.

This manual covers maintenance and recommended procedures for repair to engine and chassis components. It is written for the journeyman mechanic, but is simple enough for most mechanically-inclined owners to understand.

Electrical Troubleshooting Manual:
This manual complements the service manual by providing in-depth troubleshooting information for each electrical circuit in your vehicle.

Body Repair Manual:
This manual describes the procedures involved in the replacement of damaged body parts.

* : U.S. only
Service Information Summary

**Gasoline**: Unleaded gasoline, pump octane number of 87 or higher.

**Fuel Tank Capacity**: 10.8 US gal (41 L)

**Recommended Engine Oil**: API Premium grade 5W-20 detergent oil (see page 177).

Oil change capacity (including filter): 3.8 US qt (3.6 L)

**Automatic Transmission Fluid**: Honda ATF-Z1 (Automatic Transmission Fluid) preferred, or a DEXRON® III ATF as a temporary replacement (see page 183).

**Manual Transmission Fluid**: Honda Manual Transmission Fluid preferred, or an SAE 10W-30 or 10W-40 motor oil as a temporary replacement (see page 184).

Capacity (including differential): 1.6 US qt (1.5 L)

**Brake Fluid**: Honda Heavy Duty Brake Fluid DOT 3 preferred, or a DOT 3 or DOT 4 brake fluid as a temporary replacement (see page 185).

**Tire Pressure (measured cold)**: Front/Rear: 32 psi (220 kPa, 2.2 kgf/cm²)

**Spare Tire Pressure**: 60 psi (420 kPa, 4.2 kgf/cm²)
