**Service Information Summary**

A summary of information you need when you pull up to the fuel pump.
This Owner's Manual should be considered a permanent part of the vehicle, and should remain with the vehicle when it is sold.

This Owner's Manual covers all models of the Odyssey. You may find descriptions of equipment and features that are not on your particular model.

The information and specifications included in this publication were in effect at the time of approval for printing. Honda Motor Co., Ltd. reserves the right, however, to discontinue or change specifications or design at any time without notice and without incurring any obligation whatsoever.

Si prefiere este Manual del Propietario en español, comuníquese con el concesionario Honda.

POUR CLIENTS CANADIEN
AVIS IMPORTANT: Si vous avez besoin d'un Manuel du Conducteur en français, veuillez demander à votre concessionnaire de commander le numéro de pièce 38S0X640
Congratulations! Your selection of a 2003 Honda Odyssey was a wise investment. It will give you years of driving pleasure.

One of the best ways to enhance the enjoyment of your new Honda is to read this manual. In it, you will learn how to operate its driving controls and convenience items. Afterwards, keep this owner’s manual in your vehicle so you can refer to it at any time.

Several warranties protect your new Honda. Read the warranty booklet thoroughly so you understand the coverages and are aware of your rights and responsibilities.

Maintaining your vehicle according to the schedules given in this manual helps to keep your driving trouble-free while it preserves your investment. When your vehicle needs maintenance, keep in mind that your Honda dealer’s staff is specially trained in servicing the many systems unique to your Honda. Your Honda dealer is dedicated to your satisfaction and will be pleased to answer any questions and concerns.

California Proposition 65 Warning

**WARNING:** This product contains or emits chemicals known to the State of California to cause cancer and birth defects or other reproductive harm.

As you read this manual, you will find information that is preceded by a **NOTICE** symbol. This information is intended to help you avoid damage to your Honda, other property, or the environment.
Your safety, and the safety of others, is very important. And operating this vehicle safely is an important responsibility.

To help you make informed decisions about safety, we have provided operating procedures and other information on labels and in this manual. This information alerts you to potential hazards that could hurt you or others.

Of course, it is not practical or possible to warn you about all the hazards associated with operating or maintaining your vehicle. You must use your own good judgement.

You will find this important safety information in a variety of forms, including:

- **Safety Labels** — on the vehicle.
- **Safety Messages** — preceded by a safety alert symbol 🔴 and one of three signal words: DANGER, WARNING, or CAUTION.

These signal words mean:

- **DANGER** — You WILL be KILLED or SERIOUSLY HURT if you don’t follow instructions.
- **WARNING** — You CAN be KILLED or SERIOUSLY HURT if you don’t follow instructions.
- **CAUTION** — You CAN be HURT if you don’t follow instructions.

- **Safety Headings** — such as Important Safety Reminders or Important Safety Precautions.
- **Safety Section** — such as Driver and Passenger Safety.
- **Instructions** — how to use this vehicle correctly and safely.

This entire book is filled with important safety information — please read it carefully.

37. Carbon Monoxide Hazard
38. Safety Labels
You’ll find many safety recommendations throughout this section, and throughout this manual. The recommendations on this page are the ones we consider to be the most important.

**Always Wear Your Seat Belt**
A seat belt is your best protection in all types of collisions. Airbags supplement seat belts, but airbags are designed to inflate only in a moderate to severe frontal collision. So even though your vehicle is equipped with airbags, make sure you and your passengers always wear your seat belts, and wear them properly. (See page 17.)

**Restrain All Children**
Children are safest when they are properly restrained in a back seat, not the front seat. A child who is too small for a seat belt must be properly restrained in a child safety seat. (See page 24.)

**Be Aware of Airbag Hazards**
While airbags can save lives, they can cause serious or fatal injuries to occupants who sit too close to them, or are not properly restrained. Infants, young children, and short adults are at the greatest risk. Be sure to follow all instructions and warnings in this manual. (See page 10.)

**Don’t Drink and Drive**
Alcohol and driving don’t mix. Even one drink can reduce your ability to respond to changing conditions, and your reaction time gets worse with every additional drink. So don’t drink and drive, and don’t let your friends drink and drive, either.

**Control Your Speed**
Excessive speed is a major factor in crash injuries and deaths. Generally, the higher the speed the greater the risk, but serious accidents can also occur at lower speeds. Never drive faster than is safe for current conditions, regardless of the maximum speed posted.

**Keep Your Vehicle in Safe Condition**
Having a tire blowout or a mechanical failure can be extremely hazardous. To reduce the possibility of such problems, check your tire pressures and condition frequently, and perform all regularly scheduled maintenance. (See page 288.)
Your vehicle is equipped with many features that work together to protect you and your passengers during a crash. Some safety features do not require any action on your part. These include a strong steel framework that forms a safety cage around the passenger compartment; front and rear crush zones that are designed to crumple and absorb energy during a crash; a collapsible steering column; and seat belt tensioners that automatically tighten the front seat belts in the event of a crash.

CONTINUED
These safety features are designed to reduce the severity of injuries in a crash. However, you and your passengers can’t take full advantage of these safety features unless you remain sitting in a proper position and **always wear your seat belts properly.** In fact, some safety features can contribute to injuries if they are not used properly.

**Seat Belts**
For your safety, and the safety of your passengers, your vehicle is equipped with seat belts in all seating positions.

Your seat belt system also includes a light on the instrument panel to remind you and your passengers to fasten your seat belts.

**Why Wear Seat Belts**
Seat belts are the single most effective safety device for adults and larger children. (Infants and smaller children must be properly restrained in child seats.)

Not wearing a seat belt properly increases the chance of serious injury or death in a crash, even though your vehicle has airbags.

In addition, most states and all Canadian provinces require you to wear seat belts.
WARNING

Not wearing a seat belt properly increases the chance of serious injury or death in a crash, even if you have airbags.

Be sure you and your passengers always wear seat belts and wear them properly.

When properly worn, seat belts:

- Keep you connected to the vehicle so you can take advantage of the vehicle's built-in safety features.
- Help protect you in almost every type of crash, including frontal, side, and rear impacts and rollovers.

- Help keep you from being thrown against the inside of the vehicle and against other occupants.
- Keep you from being thrown out of the vehicle.
- Help keep you in a good position should the airbags ever deploy. A good position reduces the risk of injury from an inflating airbag, and allows you to get the best advantage from the airbag.

Of course, seat belts cannot completely protect you in every crash. But in most cases, seat belts can reduce your risk of serious injury.

What you should do: Always wear your seat belt, and make sure you wear it properly.
Always wear your seat belt properly, and sit upright and as far back as possible from the steering wheel or dashboard. They are designed to supplement the seat belts.

To do their job, airbags must inflate with tremendous force and speed. So while airbags help save lives, they can cause minor injuries, or more serious or even fatal injuries if occupants are not properly restrained or sitting properly.

The most important things you need to know about your airbags are:

- **Airbags do not replace seat belts.** They are designed to supplement the seat belts.

- **Airbags offer no protection in rear impacts, rollovers, or minor frontal or side collisions.**

- **Airbags can pose serious hazards.** To do their job, airbags must inflate with tremendous force and speed. So while airbags help save lives, they can cause minor injuries, or more serious or even fatal injuries if occupants are not properly restrained or sitting properly.

**What you should do:** Always wear your seat belt properly, and sit upright and as far back as possible from the steering wheel or dashboard.
Your Vehicle’s Safety Features

Seats & Seat-Backs
Your vehicle’s seats are designed to keep you in a comfortable, upright position so you can take full advantage of the protection offered by seat belts and the energy absorbing materials in the seats.

How you adjust your seats and seat-backs can also affect your safety. For example, sitting too close to the steering wheel or dashboard increases the risk of you or your passenger being injured by striking the inside of the vehicle, or by an inflating airbag.

Reclining a seat-back too far reduces the seat belt’s effectiveness and increases the chance that the seat’s occupant will slide under the seat belt in a crash and be seriously injured.

What you should do: Move the front seats as far back as possible, and keep adjustable seat-backs in an upright position whenever the vehicle is moving.

Head Restraints
Head restraints can help protect you from whiplash and other injuries. For maximum protection, the back of your head should rest against the center of the head restraint.

Door Locks
Keeping your doors locked reduces the chance of being thrown out of the vehicle during a crash. It also helps prevent occupants from accidentally opening a door and falling out, and outsiders from unexpectedly opening your doors.
Pre-Drive Safety Checklist
To make sure you and your passengers get the maximum protection from your vehicle’s safety features, check the following each time before you drive away:

- All adults, and children who have outgrown child safety seats, are wearing their seat belts and wearing them properly (see page 17).

- Any infant or small child is properly restrained in a child seat in a back seat (see page 24).

- Front seat occupants are sitting upright and as far back as possible from the steering wheel and dashboard (see page 13).

- Seat-backs are upright (see page 15).

- Head restraints are properly adjusted (see page 16).

- All doors and the tailgate are closed and locked (see page 13).

- All cargo is properly stored or secured (see page 253).

The rest of this section gives more detailed information about how you can maximize your safety.

Remember, however, that no safety system can prevent all injuries or deaths that can occur in severe crashes, even when seat belts are properly worn and the airbags deploy.
Introduction
The following pages provide instructions on how to properly protect the driver and other adult occupants.

These instructions also apply to children who have outgrown child seats and are large enough to wear lap/shoulder belts. (See page 42 for important additional guidelines on how to properly protect larger children.)

1. Close and Lock the Doors
After everyone has entered the vehicle, be sure the doors and tailgate are closed and locked.

Your vehicle has a door and tailgate monitor light on the instrument panel to indicate when a specific door or the tailgate is not tightly closed.

For safety, locking the doors reduces the chance that a passenger, especially a child, will open a door while the vehicle is moving and accidentally fall out. It also reduces the chance of someone being thrown out of the vehicle during a crash.

For security, locked doors can prevent an outsider from unexpectedly opening a door when you come to a stop.

See page 92 for how to lock the doors.

2. Adjust the Front Seats
Any driver who sits too close to the steering wheel is at risk of being seriously injured or killed by striking the steering wheel or from being struck by an inflating front airbag during a crash.

CONTINUED
Protecting Adults

To reduce the chance of injury, wear your seat belt properly, sit upright with your back against the seat, and move the seat away from the steering wheel to the farthest distance that allows you to maintain full control of the vehicle.

The National Highway Traffic Safety Administration and Transport Canada recommend that drivers adjust the seat so the center of the chest is at least 10 inches (25 cm) away from the center of the steering wheel. Also make sure your front seat passenger moves the seat as far to the rear as possible.

**WARNING**

- Sitting too close to a front airbag can result in serious injury or death if the front airbags inflate.
- Always sit as far back from the front airbags as possible.

Most shorter drivers can get far enough away from the steering wheel and still reach the pedals. However, if you are concerned about sitting too close, we recommend that you investigate whether some type of adaptive equipment may help.

Once your seat is adjusted correctly, rock it back and forth to make sure the seat is locked in position.

See page 110 for how to adjust the front seats.
3. Adjust the Seat-Backs

A front passenger should also adjust the seat-back to an upright position, but as far from the dashboard as possible. A passenger who sits too close to the dashboard could be injured if the front airbag inflates.

Reclining a seat-back so that the shoulder part of the belt no longer rests against the occupant's chest reduces the protective capability of the belt. It also increases the chance of sliding under the belt in a crash and being seriously injured. The farther a seat-back is reclined, the greater the risk of injury.

Adjust the driver's seat-back to a comfortable, upright position, leaving ample space between your chest and the airbag cover in the center of the steering wheel. If you sit too close to the steering wheel, you could be injured if the front airbag inflates.

**WARNING**

Reclining the seat-back too far can result in serious injury or death in a crash.

Adjust the seat-back to an upright position and sit well back in the seat.

See page 111 for how to adjust seat-backs.
Before driving, make sure everyone with an adjustable head restraint has properly positioned the head restraint. The restraint should be positioned so the back of the occupant's head rests against the center of the restraint. A taller person should adjust the restraint as high as possible.

**WARNING**

Improperly positioning head restraints reduces their effectiveness and you can be seriously injured in a crash.

Make sure head restraints are in place and positioned properly before driving.

Properly adjusted head restraints will help protect occupants from whiplash and other crash injuries.

See page 115 for how to adjust the head restraints.
5. Fasten and Position the Seat Belts

Using a Lap/Shoulder Belt (Except the center position of the third row)

Insert the latch plate into the buckle, then tug on the belt to make sure the belt is securely latched. Also check that the belt is not twisted, because a twisted belt can cause serious injuries in a crash.

Position the lap part of the belt as low as possible across your hips, then pull up on the shoulder part of the belt so the lap part fits snugly. This lets your strong pelvic bones take the force of a crash and reduces the chance of internal injuries.

If necessary, pull up on the shoulder belt again to remove any slack from the shoulder belt, then check that the belt rests across the center of your chest and over your shoulder. This spreads the forces of a crash over the strongest bones in your upper body.

**WARNING**

Improperly positioning the seat belts can cause serious injury or death in a crash.

Make sure all seat belts are properly positioned before driving.

CONTINUED
If the seat belt touches or crosses your neck, or if it crosses your arm instead of your shoulder, you need to adjust the seat belt anchor height.

The front seats and middle row seats have adjustable seat belt anchors. To adjust the height of a seat belt anchor, press the release button and slide the anchor up or down as needed (it has four positions).

Never place the shoulder portion of a lap/shoulder belt under your arm or behind your back. This could cause very serious injuries in a crash.

Using the Lap/Shoulder Belt in the Center Position of the Third Row

Unlatch the metal plate of the shoulder belt from the anchor on the ceiling and extend the belt by pulling the metal plate.
Attach the metal hook on the edge of the shoulder belt to the metal loop on the latch plate of the lap belt marked CENTER. Make sure the shoulder belt is securely attached and it is not twisted. A twisted belt can cause serious injuries in a crash.

Insert the latch plate of the lap belt into the buckle marked CENTER. If the belt is too short, hold the latch plate at a right angle and pull on the plate to extend the belt. Then insert the latch plate into the buckle, and tug on the lap and shoulder belts to make sure the belt is securely latched.

Position the lap belt as low as possible across your hips, then pull on the loose end of the lap belt for a snug but comfortable fit. This lets your strong pelvic bones take the force of a crash and reduces the chance of internal injuries.
If necessary, pull up on the shoulder belt again to remove any slack from the shoulder belt, then check that the belt rests across the center of your chest and over your shoulder. This spreads the forces of a crash over the strongest bones in your upper body.

Never place the shoulder portion of a lap/shoulder belt under your arm or behind your back. This could cause very serious injuries in a crash.

If a Seat Belt Doesn’t Work Properly
If a seat belt does not seem to work as it should, it may not protect the occupant in a crash. **No one should sit in a seat with an inoperative seat belt.** Anyone using a seat belt that is not working properly can be seriously injured or killed. Have your Honda dealer check the belt as soon as possible.

See page 50 for additional information about your seat belt system and how to take care of your belts.

6. Adjust the Steering Wheel

Adjust the steering wheel, if needed, so that the wheel points toward your chest, not toward your face.

Pointing the steering wheel toward your chest provides optimal protection from the airbag.

See page 88 for how to adjust the steering wheel.
7. Maintain a Proper Sitting Position
After all occupants have adjusted their seats and put on seat belts, it is very important that they continue to sit upright, well back in their seats, with their feet on the floor, until the vehicle is parked and the engine is off.

Sitting improperly can increase the chance of injury during a crash. For example, if an occupant slouches, lies down, turns sideways, sits forward, leans forward or sideways, or puts one or both feet up, the chance of injury during a crash is greatly increased.

In addition, an occupant who is out of position in the front seat can be seriously or fatally injured by striking interior parts of the vehicle, or by being struck by an inflating front airbag. Being struck by an inflating side airbag can result in possibly serious injuries.

Remember, to get the best protection from your vehicle’s airbags and other safety features, you must sit properly and wear your seat belt properly.

**WARNING**

Sitting improperly or out of position can result in serious injury or death in a crash.

Always sit upright, well back in the seat, with your feet on the floor.
Pregnant women should also sit upright and as far back as possible from the steering wheel or dashboard. This will reduce the risk of injuries to both the mother and her unborn child that can be caused by a crash or an inflating airbag.

Because protecting the mother is the best way to protect her unborn child, a pregnant woman should always wear a seat belt whenever she drives or rides in a vehicle.

Remember to keep the lap portion of the belt as low as possible across your hips.

Each time you have a check-up, ask your doctor if it’s okay for you to drive.

Advice for Pregnant Women

Additional Safety Precautions

- **Never let passengers ride in the cargo area or on top of a folded-down back seat.** All passengers must sit in locked, upright seats and be properly restrained by seat belts.

- **Passengers should not stand up or change seats while the vehicle is moving.** A passenger who is not wearing a seat belt during a crash or emergency stop can be thrown against the inside of the vehicle, against other occupants, or out of the vehicle.

- **Two people should never use the same seat belt.** If they do, they could be very seriously injured in a crash.
### Protecting Adults

- **Do not put any accessories on seat belts.** Devices intended to improve occupant comfort or reposition the shoulder part of a seat belt can severely compromise the protective capability of the seat belt and increase the chance of serious injury in a crash.

- **Do not place hard or sharp objects between yourself and a front airbag.** Carrying hard or sharp objects on your lap, or driving with a pipe or other sharp object in your mouth, can result in injuries if your front airbag inflates.

- **Keep your hands and arms away from the airbag covers.** If your hands or arms are close to the airbag covers in the center of the steering wheel and on top of the dashboard, they could be injured if the airbags inflate.

- **Do not attach or place objects on the front airbag covers.** Any object attached to or placed on the covers marked “SRS AIRBAG,” in the center of the steering wheel and on top of the dashboard, could interfere with the proper operation of the airbags. Or, if the airbags inflate, the objects could be propelled inside the car and hurt someone.

- **Do not attach hard objects on or near a front door.** If a side airbag inflates, a cup holder or other hard object attached on or near the door could be propelled inside the vehicle and hurt someone.

- **Do not modify the front seats.** This could make the driver’s seat position sensor or the front passenger’s seat weight sensors ineffective.

- **Do not place any items under the front seats.** This could cause problems with the driver’s seat position sensor or the front passenger’s seat weight sensors.
Children depend on adults to protect them. However, despite their best intentions, many parents and other adults may not know how to properly protect young passengers.

So if you have children, or if you ever need to drive with a grandchild or other children in your vehicle, be sure to read this section.

**WARNING**

Children who are unrestrained or improperly restrained can be seriously injured or killed in a crash.

Any child too small for a seat belt should be properly restrained in a child seat. A larger child should be properly restrained with a seat belt.

All Children Must Be Restrained

Each year, many children are injured or killed in vehicle crashes because they are either unrestrained or not properly restrained. In fact, vehicle accidents are the number one cause of death of children ages 12 and under.

To reduce the number of child deaths and injuries, every state and Canadian province requires that infants and children be restrained whenever they ride in a vehicle.

*Any child who is too small to wear a seat belt should be properly restrained in a child seat.* (See page 30.)

*A larger child should always be restrained with a seat belt, and use a booster, if needed.* (See page 42.)
According to accident statistics, children of all ages and sizes are safer when they are restrained in the back seat, not the front seat. The National Highway Traffic Safety Administration and Transport Canada recommend that all children ages 12 and under be properly restrained in a back seat. In a back seat, children are less likely to be injured by striking hard interior parts during a collision or hard braking. Also, children cannot be injured by an inflating airbag when they ride in the back.

If you are not wearing a seat belt in a crash, you could be thrown forward into the dashboard and crush the child. If you are wearing a seat belt, the child can be torn from your arms during a crash. For example, if your vehicle crashes into a parked vehicle at 30 mph (48 km/h), a 20-lb (9 kg) infant will become a 600-lb (275 kg) force, and you will not be able to hold on.

Never hold an infant or child on your lap. If you are not wearing a seat belt in a crash, you could be thrown forward into the dashboard and crush the child.

Never put a seat belt over yourself and an infant or child. During a crash, the belt could press deep into the child and cause very serious injuries.

Additional Precautions to Parents

Children Should Sit in the Back Seat

According to accident statistics, children of all ages and sizes are safer when they are restrained in the back seat, not the front seat. The National Highway Traffic Safety Administration and Transport Canada recommend that all children ages 12 and under be properly restrained in a back seat.

In a back seat, children are less likely to be injured by striking hard interior parts during a collision or hard braking. Also, children cannot be injured by an inflating airbag when they ride in the back.
 Protecting Children

The Passenger’s Front Airbag Can Pose Serious Risks
Front airbags have been designed to help protect adults in a moderate to severe frontal collision. To do this, the passenger’s front airbag is quite large, and it can inflate with enough force to cause very serious injuries.

To help prevent airbag-caused deaths and injuries to children, this vehicle has an advanced airbag system.

With an advanced airbag system, the front passenger’s airbag is turned off if sensors detect a total weight of less than about 65 lbs (30 kg) in the seat, and the “Passenger Airbag Cutoff” indicator is turned on. (See page 57 for additional information on how the passenger’s airbag works.)

Even if the passenger’s front airbag is turned off, we strongly recommend that infants, small children, and larger children ride properly restrained in a back seat where they will be safer.
To remind you of the passenger’s front airbag hazards, and that children must be properly restrained in a back seat, your vehicle has warning labels on the dashboard and on the driver’s and front passenger’s visors. Please read and follow the instructions on these labels.

U.S. Models

To remind you of the passenger’s front airbag hazards, and that children must be properly restrained in a back seat, your vehicle has warning labels on the dashboard and on the driver’s and front passenger’s visors. Please read and follow the instructions on these labels.

Canadian Models

To remind you of the front airbag hazards, your vehicle has warning labels on the driver’s and front passenger’s visors. Please read and follow the instructions on these labels.

WARNING

EVEN WITH ADVANCED AIR BAGS

- Children can be killed or seriously injured by the air bag.
- The back seat is the safest place for children.
- Always use seat belts and child restraints.
- See owner’s manual for more information about air bags.

This Vehicle is Equipped with Advanced Air Bags

Even with Advanced Air Bags

Children can be killed or seriously injured by the air bag. The back seat is the safest place for children. Always use seat belts and child restraints. See owner’s manual for more information about air bags.

To be removed by owner only.

CAUTION

TO AVOID SERIOUS INJURY,
DO NOT INSTALL REARWARD-FACING CHILD SEATS IN ANY FRONT PASSENGER SEAT POSITION.
DO NOT STUFF SEAT UNECESSARILY CLOSE TO THE AIR BAG.
DO NOT PLACE ANY OBJECTS OVER THE INFLATED AIR BAG OR IN THE PATH OF THE AIR BAG AND YOURSELF.
SEE THE OWNER’S MANUAL FOR FURTHER INFORMATION AND EXPLANATIONS.

Driver and Passenger Safety 27
Many parents say they prefer to put an infant or small child in the front passenger seat so they can watch the child, or because the child requires attention.

Your vehicle has two rows of back seats where children can be properly restrained.

If you ever have to carry a group of children (when carpooling for example), and a child must ride in front:

- Place the largest child in the front seat, provided the child is large enough to wear a seat belt properly (see page 42).
- Move the vehicle seat as far to the rear as possible (see page 13).
- Have the child sit upright and well back in the seat (see page 21).
- Make sure the seat belt is properly positioned and secured (see page 17).

If a child requires close attention

Many parents say they prefer to put an infant or small child in the front passenger seat so they can watch the child, or because the child requires attention.

Placing a child in the front seat exposes the child to hazards from the passenger’s front airbag, and paying close attention to a child distracts the driver from the important tasks of driving, placing both of you at risk.

If a child requires physical attention or frequent visual contact, we strongly recommend that another adult ride with the child in a back seat. The back seat is far safer for a child than the front.
Additional Safety Precautions

- **Use childproof door locks to prevent children from opening the doors.** Using this feature will prevent children from opening the doors and accidentally falling out (see page 98).

- **Use the power sliding door main switch to prevent children from opening and closing the rear sliding doors.** Using this feature will prevent children from operating the doors accidentally (see page 104).

- **Do not leave children alone in your vehicle.** Leaving children without adult supervision is illegal in most states and Canadian provinces, and can be very hazardous. For example, infants and small children left in a vehicle on a hot day can die from heatstroke. And children left alone with the key in the ignition can accidentally set the vehicle in motion, possibly injuring themselves or others.

- **Lock all doors and the tailgate when your vehicle is not in use.** Children who play in vehicles can accidentally get trapped inside the vehicle. Teach your children not to play in or around vehicles.

- **Keep vehicle keys and remote transmitters out of the reach of children.** Even very young children learn how to unlock vehicle doors, turn on the ignition, and open the tailgate, which can lead to accidental injury or death.
General Guidelines for Using Child Seats
The following pages give general guidelines for selecting and installing child seats for infants and small children.

Selecting a Child Seat
To provide proper protection, a child seat should meet three requirements:

2. The child seat should be of the proper type and size to fit the child.

Infants: Children up to about one year old should be restrained in a rear-facing, reclining child seat. Only a rear-facing seat provides the proper support to protect an infant's head, neck, and back. See page 34 for additional information on protecting infants.

Small Children: A child who is too large for a rear-facing child seat, and who can sit up without support, should be restrained in a forward-facing child seat. See page 38 for additional information on protecting small children.
Due to variations in the design of child seats, vehicle seats, and seat belts, all child seats will not fit all vehicle seating positions.

However, Honda is confident that one or more child seat models can fit and be properly installed in all recommended seating positions in your vehicle.

Before purchasing a child seat, we recommend that parents test the child seat in the specific vehicle seating position (or positions) where they intend to use the seat. If a previously purchased child seat does not fit, you may need to buy a different one that will fit.

Your vehicle has lower anchors installed for use with LATCH (Lower Anchors and Tethers for Children) - compatible child seats. For more information, see page 48.

CONTINUED...
This page briefly summarizes Honda's recommendations on where to place rear-facing and forward-facing child seats in your vehicle.

Airbags Pose Serious Risks to Children
To help prevent airbag-caused deaths and injuries to children, this vehicle has an advanced airbag system.

With this system, the front passenger's airbag is turned off if sensors detect a total weight of less than about 65 lbs (30 kg) in the seat.

Even if the front passenger's airbag is turned off, we strongly recommend that infants and small children ride properly restrained in a back seat where they will be safer.

Front Passenger's Seat
Infants: Never in the front seat, due to the front airbag hazard. Not recommended.

Small children: Not recommended. If a small child must ride in front, move the vehicle seat to the rear-most position and secure a front-facing child seat with the seat belt (see page 39).

Back Seats
Infants: Recommended positions. Properly secure a rear-facing child seat (see page 35).

Small children: Recommended positions. Properly secure a front-facing child seat (see page 39).
Installing a Child Seat
After selecting a proper child seat, and a good position to install the seat, there are three main steps in installing the seat:

1. Properly secure the child seat to the vehicle. All child seats are designed to be secured to the vehicle with the lap part of a lap/shoulder belt. Some child seats can be secured to the vehicle’s LATCH anchorage system instead. A child whose seat is not properly secured to the vehicle can be endangered in a crash. See pages 35, 39 and 48 for instructions on how to properly secure child seats in this vehicle.

2. Make sure the child seat is firmly secured. After installing a child seat, push and pull the seat forward and from side to side to verify that it is secure.

To provide security during normal driving maneuvers as well as during a collision, we recommend that parents secure a child seat as firmly as possible.

However, a child seat does not need to be “rock solid.” In some vehicles or seating positions, it may be difficult to install a child seat so that it does not move at all. Some side-to-side or back-and-forth movement can be expected and should not reduce the child seat’s effectiveness.

If the child seat is not secure, try installing it in a different seating position, or use a different style of child seat that can be firmly secured in the desired seating position.

3. Secure the child in the child seat. Make sure the child is properly strapped in the child seat according to the child seat maker’s instructions. A child who is not properly secured in a child seat can be thrown out of the seat in a crash and be seriously injured.

Storing a Child Seat
When you are not using a child seat, either remove it and store it in a safe place, or make sure it is properly secured. An unsecured child seat can be thrown around the vehicle during a crash or sudden stop and injure someone.
Protecting Infants

Child Seat Type
Only a rear-facing child seat provides proper support for a baby’s head, neck, and back.

Two types of seats may be used: a seat designed exclusively for infants, or a convertible seat used in the rear-facing, reclining mode.

WARNING

Placing a rear-facing child seat in the front seat can result in serious injury or death during a collision.

Always place a rear-facing child seat in the back seat, not the front.

An infant must be restrained in a rear-facing child seat until the child reaches the seat maker’s weight or height limit and is at least one year old.

Child Seat Placement

We strongly recommend placing a rear-facing child seat in a back seat, not the front. Even with advanced airbags, which can automatically turn the passenger’s front airbag off (see page 62), a back seat is the safest place for an infant.

If an infant must be closely watched, have another adult sit in a back seat next to the baby.

Do not put a rear-facing child seat in a forward-facing position. If placed facing forward, an infant could be very seriously injured during a frontal collision.
When properly installed, a rear-facing child seat may prevent the driver or a front-seat passenger from moving the seat as far back as recommended (see page 13). Or it may prevent them from locking the seat-back in the desired upright position (see page 15).

In either case, we recommend that you place the child seat in another back seating position, or leave the affected seat unoccupied. If the problem cannot be solved, you may wish to get a smaller rear-facing child seat.

---

**Installing a Rear-Facing Child Seat with a Lap/Shoulder Belt**

The lap/shoulder belts in the outer back seats have a locking mechanism that must be activated to secure a child seat.

The following pages provide instructions on how to secure a rear-facing child seat with this type of seat belt.

See page 37 for how to secure a rear-facing child seat in the center position on the third seat with the lap part of the lap/shoulder belt.

For tips on installing a rear-facing child seat with either type of seat belt, see page 37.

If you have a child seat designed to be attached to the vehicle’s LATCH anchorage system, follow the instructions on page 48.

---

1. With the child seat in the desired back seating position, route the belt through the child seat according to the seat maker’s instructions, then insert the latch plate into the buckle.

---

CONTINUED
2. To activate the lockable retractor, slowly pull the shoulder part of the belt all the way out until it stops, then let the belt feed back into the retractor (you might hear a clicking noise as the belt retracts).

3. After the belt has retracted, tug on it. If the belt is locked, you will not be able to pull it out. If you can pull the belt out, it is not locked and you will need to repeat these steps.

4. After confirming that the belt is locked, grab the shoulder part of the belt near the buckle and pull up to remove any slack from the lap part of the belt. Remember, if the lap part of the belt is not tight, the child seat will not be secure. To remove slack, it may help to put weight on the child seat, or push on the back of the seat, while pulling up on the belt.

5. Push and pull the child seat forward and from side to side to verify that it is secure enough to stay upright during normal driving maneuvers. If the child seat is not secure, unlatch the belt, allow it to retract fully, then repeat these steps.

To deactivate the locking mechanism and remove a child seat, unlatch the buckle, unroute the seat belt, and let the belt fully retract.
Installing a Rear-Facing Child Seat in the Center Position of the Third Seat

To install a rear-facing child seat in the center position of the third seat, use the lap part of the lap/shoulder belt. Follow instruction number 1 on page 35 for routing and latching the seat belt.

Then pull hard on the loose end of the belt to remove any slack (it may help to put weight on the child seat while pulling on the belt). Finally, follow instruction number 5 on page 36 to verify that the child seat is secured.

Rear-Facing Child Seat Installation Tips

For proper protection, an infant must ride in a reclined, or semi-reclined position. To determine the proper reclining angle, check with the baby’s doctor or follow the seat maker’s recommendations.

To achieve the desired reclining angle, it may help to put a rolled up towel under the toe of the child seat, as shown.
We also recommend that a small child stay in the child seat as long as possible, until the child reaches the weight or height limit for the seat.

Of the different seats available, we recommend those that have a five-point harness system as shown.

We also recommend that a small child stay in the child seat as long as possible, until the child reaches the weight or height limit for the seat.

*Child Seat Placement*

We strongly recommend placing a forward-facing child seat in a back seat, not the front. Even with advanced airbags, which can automatically turn the passenger’s front airbag off (see page 62), a back seat is the safest place for a small child.

If an child must be closely watched, have another adult sit in a back seat next to the child.

If it is necessary to put a forward-facing child seat in the front, move the vehicle seat as far to the rear as possible, be sure the child seat is firmly secured to the vehicle, and the child is properly strapped in the seat.

*Child Seat Type*

A child at least one year old who can sit up without support, and who fits within the child seat maker’s weight and height limits, should be restrained in a forward-facing, upright child seat.
Installing a Child Seat with a Lap/Shoulder Belt
The lap/shoulder belts in the outer back and front passenger seating positions have a locking mechanism that must be activated to secure a child seat.

The following pages provide instructions on how to secure a forward-facing child seat with this type of seat belt.

See page 41 for how to secure a forward-facing child seat in the center position on the third seat with the lap part of the lap/shoulder belt.

If you have a child seat designed to be attached to the vehicle’s LATCH anchorage system, follow the instructions on page 48.

1. With the child seat in the desired seating position, route the belt through the child seat according to the seat maker’s instructions, then insert the latch plate into the buckle.

CONTINUED
2. To activate the lockable retractor, slowly pull the shoulder part of the belt all the way out until it stops, then let the belt feed back into the retractor (you might hear a clicking noise as the belt retracts).

3. After the belt has retracted, tug on it. If the belt is locked, you will not be able to pull it out. If you can pull the belt out, it is not locked and you will need to repeat these steps.

4. After confirming that the belt is locked, grab the shoulder part of the belt near the buckle and pull up to remove any slack from the lap part of the belt. Remember, if the lap part of the belt is not tight, the child seat will not be secure. It may help to put weight on the child seat, or push on the back of the seat, while pulling up on the belt.
5. Push and pull the child seat forward and from side to side to verify that it is secure enough to stay upright during normal driving maneuvers. If the child seat is not secure, unlatch the belt, allow it to retract fully, then repeat these steps.

To deactivate the locking mechanism in order to remove a child restraint system, unlatch the buckle, unrout the seat belt, and let the belt fully retract.

Installing a Child Seat in the Center Position of the Third Seat

To install a forward-facing child seat in the center position of the third seat, use the lap part of the lap/shoulder belt. Follow instruction number 1 on page 39 for routing and latching the seat belt.

CONTINUED
Then pull hard on the loose end of the belt to remove the any slack (it may help to put weight on the child seat while pulling on the belt). Finally, follow instruction number 5 on page 41 to verify that the child seat is secured.

Protecting Larger Children
When a child reaches the recommended weight or height limit for a forward-facing child seat, the child should sit in the back seat on a booster and wear a lap/shoulder belt.

We recommend that the child use a booster seat until the child is tall enough to use the seat belt without a booster.

The following pages give instructions on how to check proper seat belt fit, what kind of booster seat to use if one is needed, and important precautions for a child who must sit in the front seat.

⚠️ WARNING
Allowing a larger child to sit improperly in the front seat can result in injury or death if the passenger’s front airbag inflates.

If a larger child must sit in front, make sure the child moves the seat as far back as possible, uses a booster seat if needed, and wears the seat belt properly.
Checking Seat Belt Fit

To determine if a lap/shoulder belt properly fits a child, have the child sit in a rear seat, all the way back against the seat, and put on the seat belt. Follow the instructions on page 17. Then check how the belt fits.

If the shoulder part of the belt rests over the child’s collarbone and against the center of the chest, and the lap belt rests over the child’s hipbones and touches the tops of the thighs as shown, the child is probably big enough to wear the seat belt.

However, if the shoulder belt touches or crosses the child’s neck, or if the lap belt crosses the child’s stomach, the child needs to use a booster seat.

Do not let a child wear a seat belt across the neck or over the stomach. This could result in serious neck and internal injuries during a crash.

Do not let a child put the shoulder part of a seat belt behind the back or under the arm. This could cause very serious injuries during a crash. It also increases the chance that the child will slide under the belt in a crash and be injured.

Do not put any accessories on a seat belt. Devices intended to improve occupant comfort or reposition the shoulder part of a seat belt, severely compromise the protective capability of the seat belt and increase the chance of serious injury in a crash.

Two children should never use the same seat belt. If they do, they could be very seriously injured in a crash.

CONTINUED
The National Highway Traffic Safety Administration and Transport Canada recommend that all children ages 12 and under be properly restrained in a back seat.

We strongly recommend that a child use a booster seat in a back seat, not in the front. Even if the passenger’s front airbag is off, a back seat is the safest place for the child.

Whichever style you select, follow the booster seat maker’s instructions.

If a child who uses a booster must ride in front, move the vehicle seat as far to the rear as possible, and be sure the child is wearing the seat belt properly.

A child may continue using a booster seat until the tops of the ears are even with the top of the seat-back. A child of this height should be tall enough to use the lap/shoulder belt without a booster.

Even then, the child may still need to use a booster seat. Note that some states now require children to use boosters until they reach a certain age and/or weight. Be sure to check current laws in the state or states where you intend to drive.

When Can a Larger Child Sit in Front

The National Highway Traffic Safety Administration and Transport Canada recommend that all children ages 12 and under be properly restrained in a back seat.

Even with advanced front airbags, the back seat is the safest place for a child of any age or size.

If the passenger’s front airbag is on, and it inflates in a moderate to severe frontal collision, the airbag can cause serious injuries to a child who is unrestrained, improperly restrained, sitting too close to the airbag, or out of position.

The side airbag also poses risks. If any part of a larger child’s body is in the path of a deploying airbag, the child could receive possibly serious injuries.
Protecting Children

Of course, children vary widely. And while age may be one indicator of when a child can safely ride in the front, there are other important factors you should consider.

**Physical Size**
Physically, a child must be large enough for the lap/shoulder belt to properly fit over the hips, chest, and shoulder (see pages 17 and 42). If the seat belt does not fit properly, the child should not sit in the front.

**Maturity**
To safely ride in front, a child must be able to follow the rules, including sitting properly and wearing the seat belt properly throughout a ride.

If you decide that a child can safely ride up front, be sure to:

- Carefully read the owner’s manual and make sure you understand all seat belt instructions and all safety information.
- Move the vehicle seat to the rear-most position.
- Have the child sit up straight, back against the seat, and feet on or near the floor.
- Check that the child’s seat belt is properly positioned and secured.
- Remind the child not to lean toward the door.
- Supervise the child. Even mature children sometimes need to be reminded to fasten the seat belts or sit properly.
Using Child Seats with Tethers
Your vehicle has tether anchorage points for a tether-style child seat to be installed on the second or third row as shown.

Since a tether can provide additional security, we recommend using a tether whenever one is required or available. (Tethers are required in Canada.)

Second Seat Installation:

Lift the head restraint, then route the tether strap over the seat-back between the legs of the head restraint.

Each second row bucket seat has a tether anchorage point on the underside of the seat cushion.
Third Seat Installation:

If you want to use either of the outside anchorage points, remove the tether hardware from the center anchorage point, remove the plug from the anchorage point you are going to use with a small flat-tipped screwdriver, then install the tether hardware.

When installing tether hardware, make sure the toothed washer is on the bottom of the bolt. Tighten the bolt to:

16 lbf-ft (22 N·m, 2.2 kgf·m)

If a torque wrench was not used, see your Honda dealer as soon as possible to verify proper installation.

To attach the tether to the child seat, follow the child seat maker’s instructions.

If you are not sure how to install the tether, or you need mounting hardware, contact your Honda dealer.

Attach the tether strap hook to the tether anchorage point as shown in the illustration, then tighten the strap according to the child seat maker’s instructions. Make sure the strap is not twisted.

There are three anchorage points on the tailgate sill. The tether hardware is installed on the center anchorage point.
Using LATCH

Your vehicle is equipped with LATCH (Lower Anchors and Tethers for Children) at the second row seats. The lower anchors are located between the seat-back and seat bottom and are to be used only with a child seat designed for use with LATCH.

The exact location of each lower anchorage is marked with a small button above the lower anchorage point.

To install a LATCH-compatible child seat:

1. Move the seat belt buckle or seat belt tongue away from the lower anchors.

2. Make sure there are no foreign objects around the anchors. Foreign objects could get in the way of a secure connection between the child seat and the anchors.

3. Put the child seat in a second row vehicle seat and attach the child seat to the lower anchors according to the child seat maker's instructions.

Driver and Passenger Safety
4. Follow the child seat maker’s instructions for any additional advice on adjusting or tightening the fit.

5. Attach the tether strap hook to the tether anchorage point, and tighten the strap according to the child seat maker’s instructions. Make sure the strap is not twisted.

6. Push and pull the child seat forward and from side to side to verify that it is secure enough to stay upright during normal driving maneuvers.

This symbol on rear or forward facing child seats or booster cushions indicates the presence of LATCH compatible hardware.
To unlock the belt, push the red PRESS button on the buckle.

To fasten the belt, insert the latch plate into the buckle, then tug on the belt to make sure the buckle is latched.

To unlock the belt, push the red PRESS button on the buckle. Guide the belt across your body so that it retracts completely. After exiting the vehicle, be sure the belt is out of the way and will not get closed in the door.

All seat belts have an emergency locking retractor. In normal driving, the retractor lets you move freely in your seat while it keeps some tension on the belt. During a collision or sudden stop, the retractor automatically locks the belt to help restrain your body.

**Seat Belt System Components**

Your seat belt system includes lap/shoulder belts in all seven seating positions. The front seat belts are also equipped with automatic seat belt tensioners.

The seat belt system also includes a light on the instrument panel to remind you and your passengers to fasten your belts. If the driver’s seat belt is not fastened before the ignition is turned ON (II), the light will come on and a beeper will also sound. The beeper will stop after a few seconds, but the light will stay on until the driver’s seat belt is fastened.

**Lap/Shoulder Belt**

Your vehicle has two types of lap/shoulder belts. The center position of the third seat has a combination of a lap belt and a shoulder belt. For maximum safety, they are designed to be used together.

All other seating positions have a one-piece lap/shoulder belt. This seat belt goes over your shoulder, across your chest and across your hips.
The seat belts in all positions except the driver's and the center position of the third seat have an additional locking mechanism that must be activated to secure a child seat. (See pages 35 and 39 for instructions on how to secure child seats with this type of seat belt.)

If the shoulder part of the belt is pulled all the way out, the locking mechanism will activate. The belt will retract, but it will not allow the passenger to move freely.

To deactivate the locking mechanism, unlatch the buckle and let the seat belt fully retract. To refasten the belt, pull it out only as far as needed.

See page 17 for instructions on how to wear the lap/shoulder belt properly.

Attach the metal hook on the edge of the shoulder belt to the metal loop on the latch plate of the lap belt marked CENTER, then tug on the shoulder belt to make sure it is securely attached.

Insert the latch plate of the lap belt into the buckle marked CENTER, then tug on the lap belt to make sure the buckle is latched.

To unlock the belt, push the red PRESS button on the buckle and detach the shoulder belt from the lap belt.

See page 18 for how to lengthen the lap belt, and how to properly position the lap and shoulder belts.

The combination lap belt and shoulder belt in the center position of the third seat goes over your shoulder, across your chest and over your hips. The shoulder belt has an emergency locking retractor that works in combination with the lap belt.

To fasten the seat belt, unlatch the metal plate of the shoulder belt from the anchor on the ceiling and extend the belt by pulling the metal plate.
The tensioners are designed to activate primarily in frontal collisions. The tensioners are independent of the airbag system, so they can be activated during a collision that might not cause the airbags to deploy. In this case, the airbags would not be needed but the additional seat belt tension can be helpful.

The tensioners will be activated in a collision severe enough to cause the front airbags to inflate.

When the tensioners are activated, the seat belts will remain tight until they are unbuckled in the normal way.

The SRS indicator light will come on if there is a problem with your automatic seat belt tensioners (see page 59).
Seat Belt Maintenance
For safety, you should check the condition of your seat belts regularly.

Pull each belt out fully and look for frays, cuts, burns, and wear. Check that the latches work smoothly and that the lap/shoulder belts retract easily. Any belt not in good condition or not working properly will not provide good protection and should be replaced as soon as possible.

U.S. Models
Honda provides a lifetime warranty on seat belts. Honda will repair or replace any seat belt component that fails to function properly during normal use. Please see your Honda Warranty Information booklet for details.

⚠️ WARNING ⚠️
Not checking or maintaining seat belts can result in serious injury or death if the seat belts do not work properly when needed.

Check your seat belts regularly and have any problem corrected as soon as possible.

If a seat belt is worn during a crash, it must be replaced by the dealer. A belt that has been worn during a crash may not provide the same level of protection in a subsequent crash. The dealer should also inspect the anchors for damage and replace them if needed.

Automatic seat belt tensioners that deployed during a crash must be replaced.

For information on how to clean your seat belts, see page 347.
Your Supplemental Restraint System (SRS) includes:

- Two front airbags. The driver’s airbag is stored in the center of the steering wheel; the front passenger’s airbag is stored in the dashboard. Both are marked “SRS AIRBAG.”
- Automatic seat belt tensioners (see page 52).
- Sensors that can detect a moderate to severe frontal collision.
- A sophisticated electronic system that continually monitors and records information about the sensors, the control unit, the airbag activators, and driver and passenger seat belt use when the ignition is ON (II).
During a frontal crash, your seat belts help restrain your lower body and torso. Your airbag provides a cushion to help restrain and protect your head and chest.

Since both airbags use the same sensors, both airbags normally inflate at the same time. However, it is possible for only one airbag to inflate.

This can occur when the severity of a collision is at the margin, or threshold, that determines whether or not the airbags will deploy. In such cases, the seat belt will provide sufficient protection, and the supplemental protection offered by the airbag would be minimal.
The total time for inflation and deflation is approximately one-tenth of a second, so fast that most occupants are not aware that the airbags deployed until they see them lying in their laps.

After a crash, you may see what looks like smoke. This is actually powder from the airbag's surface. Although the powder is not harmful, people with respiratory problems may experience some temporary discomfort. If this occurs, get out of the vehicle as soon as it is safe to do so.

**Driver's Seat Position Sensor**

Your vehicle has a driver's seat position sensor as a part of the advanced airbag system. The sensor is located under the driver's seat. This sensor monitors the driver's seat sliding position and sends the information to the control unit. If the seat is too far forward, the control unit will control the inflation of the driver's airbag.

Do not put any cargo or metal objects under the driver's seat, and do not cover the sensor with anything, including the rear seat passenger's feet. This will cause the sensor to work improperly and will damage it.
If there is a problem in the sensor, the SRS indicator in the instrument panel comes on. In this case, the driver’s airbag will inflate normally during a crash regardless of the driver’s seating position.

**Front Passenger’s Weight Sensors**

Your vehicle has front passenger’s weight sensors as a part of the advanced airbag system. They are located under both of the front passenger’s seat rails. These sensors monitor the total weight on the seat.

If the total weight on the seat is about 65 lbs (30 kg) or less, the system shuts off the front passenger’s airbag and the passenger airbag cutoff indicator comes on. It reminds you that the front passenger’s airbag will not inflate during a crash.

If there is no passenger in the front passenger’s seat, the passenger airbag cutoff indicator does not come on, however the system shuts off the front passenger’s airbag.

CONTINUED
The driver’s and front passenger’s seat sensors may not work properly if:

- You do not wear your seat belt properly.
- You do not sit upright and as far back as possible from the steering wheel or the dashboard (see page 20).
- You do not secure the child seat properly, and move the front seat as far back as possible.

Be careful not to spill any liquids. Spilled liquids could damage the sensors under the front seats.

If your vehicle sustains a severe impact, have the driver’s seat position sensor and the front passenger’s weight sensors inspected by your Honda dealer.

**U.S. Owners**
For additional information on how your airbags work, see the booklet titled *SRS: What You Need to Know About Airbags* that came with your owner’s manual.

**Canadian Owners**
For additional information on how your airbags work, ask your dealer for a copy of the booklet titled *SRS: What You Need to Know About Airbags*. 

---

58  Driver and Passenger Safety
Additional Information About Your Airbags

How Your Side Airbags Work

Your vehicle is equipped with side airbags for the driver and a front seat passenger. The airbags are stored in the outer edges of the front seat-backs, and both are marked “SIDE AIRBAG.”

If you ever have a moderate to severe side impact, the sensors will detect rapid deceleration and signal the control unit to instantly inflate either the driver’s or the passenger’s side airbag.

Only one airbag will deploy during a side impact. If the impact is on the passenger’s side, the passenger’s side airbag will deploy even if there is no passenger.

To get the best protection from the side airbags, front seat occupants should wear their seat belts and sit upright and well back in their seats.

How the SRS Indicator Light Works

The SRS indicator light alerts you to a potential problem with your front airbags and automatic seat belt tensioners.

This light will also alert you to a potential problem with your side airbags, passenger’s side airbag automatic cutoff system (see page 60), or the driver’s seat position sensor and the front passenger’s weight sensors (see pages 57 and 62).

When you turn the ignition ON (II), this indicator will light briefly then go out. This tells you that the system is working properly.

CONTINUED
If the light comes on at any other time, or does not come on at all, you should have the system checked by your dealer. For example:

- If the SRS indicator light does not come on after you turn the ignition switch to ON (II).
- If the light stays on after the engine starts.
- If the light comes on or flashes on and off while you drive.

If you see any of these indications, your front or side airbags may not deploy, your passenger’s side airbag automatic cutoff system may not work properly, your seat belt tensioners may not work, or the sensors under the front seats may not work properly when you need them. See your Honda dealer as soon as possible.

**WARNING**

Ignoring the SRS indicator light can result in serious injury or death if the airbags, cutoff system, or tensioners do not work properly.

Have your vehicle checked by a dealer as soon as possible if the SRS light alerts you to a potential problem.

**How the Side Airbag Cutoff Indicator Light Works**

This light alerts you that the passenger’s side airbag has been automatically shut off.

It does not mean there is a problem with your side airbags. It means that the side airbag cutoff system has activated to prevent the side airbag from deploying.

To reduce the risk of injury from an inflating side airbag, your vehicle has an automatic cutoff system for the passenger’s side airbag.

Although Honda does not encourage children to ride in the front, this system is designed to shut off the side airbag if a child leans sideways and the child’s head is in the side airbag deployment path.
If a small-statured adult leans sideways, or larger adult slouches and leans sideways into the deployment path of the side airbag, the system may also shut off the side airbag.

If the side airbag cutoff indicator light comes on, you should have the passenger sit upright. Once the passenger is out of the deployment path of the side airbag, the system will turn the airbag back on and the light will go out.

A front seat passenger should not use a cushion or other object as a backrest. It may prevent the cutoff system from working properly.

When you turn the ignition switch to ON (II), the indicator should light briefly and go out (see page 73). If it doesn't light, stays on, or comes on while driving without a passenger in the front seat, have the system checked.
This light alerts you that the front passenger's airbag is shut off.

If the light is on, it does not mean there is a problem with the front passenger's airbag. If there is a problem in the weight sensors, the SRS indicator in the instrument panel comes on. In this case, the passenger airbag cutoff indicator turns off, and the front passenger's airbag will inflate during a crash.

To reduce the chance of airbag-caused injuries, the system shuts off the front passenger's airbag when the total weight on the front passenger's seat is about 65 lbs (30 kg) or less. The passenger airbag cutoff indicator comes on to remind you the front passenger's airbag will not inflate during a crash.

If there is no passenger in the front passenger's seat, this indicator does not come on, however the system shuts off the front passenger's airbag.

If this indicator comes on with no passenger in the front passenger's seat, or with an adult in the seat, there may be a problem in the advanced airbag system. Have the vehicle checked by the dealer as soon as possible.

This indicator may come on or off repeatedly, if some objects are put on the front passenger's seat, or if the temperature of the vehicle's interior changes suddenly when a door is opened.
To ensure the front passenger’s seat weight sensors keep the passenger’s airbag activated when an adult or large child weighing about 65 lbs/30 kg or more sits in the front passenger’s seat, do not allow anything to decrease the weight on the seat. This includes, but is not limited to, these examples:

- Rear passengers pushing up the front passenger’s seat with their feet.
- Front passenger’s seat forcibly pushed up by luggage or other items placed under it.
- Front passenger’s seat forcibly moved backward into luggage or other items placed behind it.

If a passenger is tall enough to use the seat belt and sit properly, but the passenger airbag cutoff indicator comes on and off repeatedly, we recommend that the passenger sits in a rear seat. If the passenger must sit on the front seat, move the seat as far to the rear as possible, have the passenger sit upright, and make sure the seat belt is worn securely.

To ensure the front passenger’s seat weight sensors keep the passenger’s airbag deactivated when an infant or small child weighing about 65 lbs/30 kg or less sits in the front passenger’s seat, do not allow anything to increase the weight on the seat. This includes, but is not limited to, these examples:

- Rear passengers pushing or pulling the front passenger’s seat-back or pushing the seat rails with their feet.
- Heavy items placed in the front passenger’s seat-back pocket.
If the passenger airbag cutoff indicator does not light, or comes on and off repeatedly while a child seat is secured on the front passenger’s seat, remove the child seat, then secure it on a rear seat.

When you turn the ignition switch to ON (II), the passenger airbag cutoff indicator will light briefly then go out. This tells you that the system is working properly.

The indicator may come on or off a few seconds later if the weight on the front passenger’s seat changes.

Airbag Service
Your front and side airbag systems are virtually maintenance-free, and there are no parts you can safely service. However, you must have your vehicle serviced if:

- **Your airbags ever inflate.** Any airbag that has deployed must be replaced along with the control unit, automatic seat belt tensioners, and other related parts. Do not try to remove or replace any airbag by yourself. This must be done by a Honda dealer or a knowledgeable body shop.

- **The SRS indicator light alerts you to a problem.** Take your vehicle to an authorized Honda dealer as soon as possible. If you ignore this indication, the airbags might not inflate when you need them.
Additional Information About Your Airbags

Additional Safety Precautions

• Do not attempt to deactivate your airbags. Together, airbags and seat belts provide the best protection.

• Do not tamper with airbag components or wiring for any reason. Tampering could cause the airbags to deploy, possibly causing very serious injury.

• Do not expose the front seat-backs to water. If rain or spilled water soaks into a seat-back, it can prevent the side airbag system from working properly.

• Do not place any items under the front seats. This could make the driver's seat position sensor and the front passenger’s weight sensors ineffective.

• Do not cover or replace front seat-back covers without consulting a Honda dealer. Improperly replacing or covering front seat-back covers can prevent your side airbags from inflating during a collision.

• Do not modify the front seats. This could make the driver’s seat position sensor and the front passenger’s weight sensors ineffective.

• If it is necessary to modify an advanced front airbag system to accommodate a person with disabilities, first contact American Honda at 800-999-1009.

See page 252 for further information and precautions relating to your airbags.
Your vehicle’s exhaust contains carbon monoxide gas. You should have no problem with carbon monoxide entering the vehicle in normal driving if you maintain your vehicle properly. Have the exhaust system inspected for leaks whenever:

- The vehicle is raised for an oil change.
- You notice a change in the sound of the exhaust.
- The vehicle was in an accident that may have damaged the underside.

**WARNING**

Carbon monoxide gas is toxic. Breathing it can cause unconsciousness and even kill you.

Avoid any enclosed areas or activities that expose you to carbon monoxide.

High levels of carbon monoxide can collect rapidly in enclosed areas, such as a garage. Do not run the engine with the garage door closed. Even with the door open, run the engine only long enough to move the vehicle out of the garage.

With the tailgate open, air flow can pull exhaust gas into your vehicle’s interior and create a hazardous condition. If you must drive with the tailgate open, open all the windows and set the heating and cooling system/climate control system as shown below.

If you must sit in your parked vehicle, even in an unconfined area, with the engine running, adjust the heating and cooling system/climate control system as follows:

1. Select the Fresh Air mode.
2. Select the ** mode.
3. Turn the fan on high speed.
4. Set the temperature control to a comfortable setting.
These labels are in the locations shown. They warn you of potential hazards that could cause serious injury. Read these labels carefully.

If a label comes off or becomes hard to read, contact your Honda dealer for a replacement.

**Hood**

**WARNING**
Accidental deployment can seriously hurt or kill you. Follow Service Manual Instructions carefully.

**ATTENTION**
Un déploiement accidentel risque de causer de graves blessures, voire la mort. Suivre attentivement les instructions du manuel de réparation.

**Radiator Cap**

**WARNING**
Never open while hot.

**SUN VISOR**

**U.S. models**

**WARNING**

Even with Advanced Air Bags
Children can be killed or seriously injured by the air bag. The back seat is the safest place for children. Always use seat belts and child restraints. See owner’s manual for more information about air bags.

**Driving and Passenger Safety**

This Vehicle is Equipped with Advanced Air Bags

Even with Advanced Air Bags
Children can be killed or seriously injured by the air bag. The back seat is the safest place for children. Always use seat belts and child restraints. See owner’s manual for more information about air bags.

**Canadian Models**

**WARNING**

Even with Advanced Air Bags
Children can be killed or seriously injured by the air bag. The back seat is the safest place for children. Always use seat belts and child restraints. See owner’s manual for more information about air bags.

</tbody>
</table>
This indicator lights when you turn the ignition switch ON (II). It is a reminder to you and your passengers to protect yourselves by fastening the seat belts. A beeper also sounds if you have not fastened your seat belt.

If you do not fasten your seat belt, the beeper will stop after a few seconds but the light stays on until you do. Both the light and the beeper stay off if you fasten your seat belt before turning on the ignition.

This indicator lights when you turn the ignition switch ON (II). If it comes on at any other time, it indicates a potential problem with your front airbags or automatic seat belt tensioners. This light will also alert you to a potential problem with your side airbags, passenger's side airbag automatic cutoff system, driver's seat position sensor, or front passenger's weight sensors. For complete information, see page 59.

This indicator lights when you turn the ignition switch ON (II). If it comes on at any other time, it indicates that the passenger's side airbag has automatically shut off. For complete information, see page 60.
Anti-lock Brake System (ABS) Indicator
This light normally comes on for a few seconds when you turn the ignition switch ON (II), and when the ignition switch is turned to START (III). If this light comes on at any other time, there is a problem in the ABS. If this happens, take the vehicle to your dealer to have it checked. With the light on, your vehicle still has normal braking ability but no anti-lock. For complete information, see page 268.

Traction Control System (TCS) Indicator
This indicator has three functions:
1. It comes on as a reminder that you have turned off the Traction Control System.
2. It flashes when the TCS is regulating wheelspin.
3. If it comes on and stays on when the Traction Control System is on, it indicates that there is a problem in the TCS.

This light also comes on when you turn the ignition ON (II) and goes off after the engine starts. See page 269 for more information on the TCS.

Immobilizer System Indicator
This indicator comes on for a few seconds when you turn the ignition switch ON (II). It will then go off if you have inserted a properly-coded ignition key. If it is not a properly-coded key, the indicator will blink and the engine will not start (see page 90).

This indicator also blinks several times when you turn the ignition switch from ON (II) to ACCESSORY (I) or LOCK (0).
This indicator comes on for a few seconds when you turn the ignition switch ON (II). If it comes on at any other time, there is a problem in the power sliding door system. With this light on, move the main switch on the dashboard to the OFF position, and have the system checked by your Honda dealer as soon as possible. You can still open or close each sliding door manually. For more information on the power sliding doors, see page 103.

All the lights in the monitor display come on when you turn the ignition switch ON (II). The lights go off after the engine starts and the tailgate and all doors are closed tightly.

Door and Brake Lamp Monitor

The appropriate light comes on in this display if the tailgate or any door is not closed tightly. If a brake light does not work, the BRAKE LAMP indicator comes on when you push the brake pedal with the ignition switch ON (II).

A burned out brake light is a hazard when drivers behind you cannot tell you are braking. Have your brake lights repaired right away.
Indicator Lights

Turn Signal and Hazard Warning Indicators
The left or right turn signal light blinks when you signal a lane change or turn. If the light does not blink or blinks rapidly, it usually means one of the turn signal bulbs is burned out (see page 333). Replace the bulb as soon as possible, since other drivers cannot see that you are signaling.

When you turn on the Hazard Warning switch, both turn signal lights blink. All turn signals on the outside of the vehicle should flash.

High Beam Indicator
This light comes on with the high beam headlights. See page 82 for information on the headlight controls.

On Canadian models, this indicator comes on with reduced brightness when the Daytime Running Lights (DRL) are on (see page 83).

“Daytime Running Lights” Indicator
Canadian models only
This indicator lights when you turn the ignition switch to ON (II) with the headlight switch off and the parking brake set. It should go off if you turn on the headlights or release the parking brake. If it comes on at any other time, it means there is a problem with the DRL. There may also be a problem with the high beam headlights.
Cruise Control Indicator
This lights when you set the cruise control. See page 235 for information on operating the cruise control.

Washer Level Indicator
This light comes on when the washer fluid level is low. Add washer fluid when you see this light come on (see page 306).

Low Fuel Indicator
This light comes on as a reminder that you must refuel soon.
Gauges

Speedometer

U.S. Models
This shows your speed in miles per hour (mph). The smaller inner numbers are the speed in kilometers per hour (km/h).

Canadian Models
This shows your speed in kilometers per hour (km/h). The smaller inner numbers are the speed in miles per hour (mph).

Tachometer

The tachometer shows the engine speed in revolutions per minute (rpm). To protect the engine from damage, never drive with the tachometer needle in the red zone.

Odometer
The odometer shows the total distance your vehicle has been driven. It measures miles in U.S. models and kilometers in Canadian models. It is illegal under U.S. federal law and Canadian provincial regulations to disconnect, reset, or alter the odometer with the intent to change the number of miles or kilometers indicated.
**Trip Meter**
This meter shows the number of miles (U.S.) or kilometers (Canada) driven since you last reset it.

There are two trip meters: Trip A and Trip B. Switch between these displays by pressing the Select/Reset button repeatedly. Each trip meter works independently, so you can keep track of two different distances.

To reset a trip meter, display it, and then press and hold the Select/Reset button until the number resets to “0.0”.

**Temperature Gauge**
This shows the temperature of the engine’s coolant. During normal operation, the pointer should rise from the bottom white mark to about the middle of the gauge. In severe driving conditions, such as very hot weather or a long period of uphill driving, the pointer may rise to near the upper white mark. If it reaches the red (Hot) mark, pull safely to the side of the road. Turn to page 366 for instructions and precautions on checking the engine’s cooling system.

**Fuel Gauge**
This shows how much fuel you have. It is most accurate when the vehicle is on level ground. It may show slightly more or less than the actual amount when you are driving on curvy or hilly roads.

The needle returns to the bottom after you turn off the ignition. The gauge shows the fuel level reading immediately after you turn the ignition switch back ON (II).

**NOTICE**
Avoid driving with an extremely low fuel level. Running out of fuel could cause the engine to misfire, damaging the catalytic converter.
Refer to the Maintenance Schedules for Normal and Severe Driving Conditions on pages 288 and 290.

For the first 6,000 miles (9,600 km) after the Maintenance Required Indicator is reset, it will come on for two seconds when you turn the ignition switch to ON (II).

If you exceed 7,500 miles (12,000 km) without having the scheduled maintenance performed, this indicator will remain on as a constant reminder.

Your dealer will reset this indicator after completing the scheduled maintenance. If this maintenance is done by someone other than your Honda dealer, reset the indicator as follows.

1. Turn off the engine.
2. Press and hold the select/reset button in the instrument panel, then turn the ignition switch ON (II).
3. Hold the button until the indicator resets (approximately ten seconds).
The two levers on the steering column contain controls for driving features you use most often. The left lever controls the turn signals, headlights, and high beams. The right lever controls the windshield washers and wipers.

The switches for the hazard warning lights and rear window defogger are located to the right of the steering column.

The controls under the left air vent are for the TCS, the cruise control, the power sliding doors and the power mirrors.

The tilt adjustment lever on the underside of the steering column allows you to tilt the steering wheel.

* To use the horn, press the pad around the “H” logo.
Headlights

The rotating switch on the left lever controls the lights. Turning this switch to the “” position turns on the parking lights, taillights, instrument panel lights, side-marker lights, and rear license plate light. Turning the switch to the “” position turns on the headlights.

If you leave the lights on with the ignition switch in ACCESSORY (I) or LOCK (0), you will hear a reminder chime when you open the driver’s door.

To change between low beams and high beams, pull the turn signal lever until you hear a click, then let go. The blue high beam indicator will light (see page 76).

To flash the high beams, pull the turn signal lever back lightly, then release it. The high beams will come on and go off.

The high beams will stay on for as long as you hold the lever back, no matter what position the headlight switch is in.
Automatic Lighting Off Feature

On EX and EX-L models
The Automatic Lighting Off feature turns off the headlights, parking lights, taillights, side marker lights, license plate lights and instrument panel lights within 15 seconds of removing the key from the ignition switch and closing the driver’s door.

This feature activates if you leave the headlight switch in the ☀ or ☾ position, remove the key, open, then close the driver’s door. If you remove the key from the ignition switch with the headlight switch on, but do not open the door and get out, the lights will turn off after 10 minutes.

The lights will turn on again when you unlock or open the driver’s door. If you unlock the door, but do not open it within 15 seconds, the lights will go off. With the driver’s door open, you will hear a lights-on reminder chime.

Daytime Running Lights (Canadian Models)
With the headlight switch off, the high beam headlights come on with reduced brightness when you turn the ignition switch to ON (II) and release the parking brake. They remain on until you turn the ignition off, even if you set the parking brake.

The headlights revert to normal operation when you turn them on with the switch.

Instrument Panel Brightness

The knob on the instrument panel controls the brightness of the instrument panel lights. Turn the knob to adjust the brightness.
Signal a turn or lane change with this lever. Push down on the lever to signal a left turn, and up to signal a right turn. If you push it up or down all the way, the turn signal continues to blink even when you release the lever. It shuts off automatically as you complete the turn.

To signal a lane change, push lightly on the turn signal lever in the proper direction and hold it. The lever will return to the center position as soon as you release it.

The right lever controls the windshield wipers and washers. The rotary switch at the end of the lever has three positions:
- INT: intermittent
- : low speed
- : high speed
To operate the wipers in mist mode, push the control lever down. The wipers run at high speed until you release the lever. This gives you a quick way to clear the windshield.

In intermittent, the wipers operate every few seconds. You can vary how often the wipers sweep the windshield by turning the INT TIME ring next to the rotary switch. The sweep interval will change slightly with speed; getting shorter as you drive faster. In low speed intermittent and high speed driving, the wipers run continuously.

If you turn the INT TIME ring to the shortest delay, the wipers will change from intermittent to low speed operation when vehicle speed exceeds 12 mph (20 km/h).

To operate the wipers in mist mode, push the control lever down. The wipers run at high speed until you release the lever. This gives you a quick way to clear the windshield.
The rear window wiper switch is located next to the windshield wiper switch.

To activate the rear windshield wiper, turn the switch “ON”. If you turn the switch “ON”, the rear windshield wiper swings twice and then will sweep the glass approximately every seven seconds. If you wish to use the wiper and washer, turn and hold the switch one position up from “ON”.

The rear window washer uses the same fluid reservoir as the windshield washer.

Windshield Washers

To clean the windshield, pull back on the wiper control lever. The washers spray until you release the lever. The wipers run at low speed while you’re pulling the lever, then complete one more sweep of the windshield after you release it.

Rear Window Wiper and Washer

The rear window wiper switch is located next to the windshield wiper switch.
Make sure the rear window is clear and you have good visibility before starting to drive.

The rear window defogger will clear fog, frost, and thin ice from the window. Push the defogger button to turn it on and off. The light above the button lights to show the defogger is on. If you do not turn it off, the defogger will shut itself off after about 15 minutes. It also shuts off when you turn off the ignition. You have to turn it on again when you restart the vehicle.

Vehicles with Navigation System

Push the button to the left of the clock to turn on the hazard warning lights (four-way flashers). This causes all four outside turn signals and both indicators in the instrument panel to flash. Use the hazard warning lights if you need to park in a dangerous area near heavy traffic, or if your vehicle is disabled.
See page 20 for important safety information about how to properly position the steering wheel.

Make any steering wheel adjustment before you start driving.

**WARNING**

Adjusting the steering wheel position while driving may cause you to lose control of the vehicle and be seriously injured in a crash.

Adjust the steering wheel only when the vehicle is stopped.

To adjust the steering wheel upward or downward:

1. Push the lever under the steering column all the way down.

2. Move the steering wheel to the desired position, making sure the wheel points toward your chest, not toward your face. Make sure you can see the instrument panel gauges and the indicator lights.

3. Push the lever up to lock the steering wheel in that position.

4. Make sure you have securely locked the steering wheel in place by trying to move it up and down.

The defogger wires on the inside of the rear window can be accidentally damaged. When cleaning the glass, always wipe side to side.
Your vehicle comes with two master keys and a valet key. The master key fits all the locks on your vehicle:
- Ignition
- Doors
- Glove Box
- Tailgate

The valet key works only in the ignition, the door locks and the tailgate. You can keep the glove box locked when you leave your vehicle and the valet key at a parking facility.

You should have received a key number plate with your keys. You will need this key number if you ever have to get a lost key replaced. Keep the plate stored in a safe place. If you need to replace a key, use only Honda-approved key blanks.

These keys contain electronic circuits that are activated by the Immobilizer System. They will not work to start the engine if the circuits are damaged.

- Protect the keys from direct sunlight, high temperature, and high humidity.
- Do not drop the keys or set heavy objects on them.
- Keep the keys away from liquids. If they get wet, dry them immediately with a soft cloth.

The keys do not contain batteries. Do not try to take them apart.

**Remote Transmitter**
Some models also come with two remote transmitters; see page 94 for an explanation of their operation.
The Immobilizer System protects your vehicle from theft. A properly-coded master or valet key must be used in the ignition switch for the engine to start. If an improperly-coded key (or other device) is used, the engine’s fuel system is disabled.

When you turn the ignition switch to ON (II), the Immobilizer System indicator should come on for a few seconds, then go out. If the indicator starts to blink, it means the system does not recognize the coding of the key. Turn the ignition switch to LOCK (0), remove the key, reinsert it, and turn the switch to ON (II) again.

The system may not recognize your key’s coding if another immobilizer key or other metal object is near the ignition switch when you insert the key. To make sure the system recognizes the key code:

- Do not keep other immobilizer keys on the same key ring.
- Use a plastic or leather key fob, not metal.
- Keep other keys away from your vehicle’s key and the ignition switch while trying to start the engine.

If the system repeatedly does not recognize the coding of your key, contact your Honda dealer.

The Immobilizer System indicator will also blink several times when you turn the ignition switch from ON (II) to ACCESSORY (I) or LOCK (0).

Do not attempt to alter this system or add other devices to it. Electrical problems could result that may make your vehicle undriveable.

If you have lost your key and you cannot start the engine, contact your Honda dealer.
As required by the FCC:
This device complies with Part 15 of the FCC rules. Operation is subject to the following two conditions: (1) This device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

Changes or modifications not expressly approved by the party responsible for compliance could void the user’s authority to operate the equipment.

This device complies with Industry Canada Standard RSS-210. Operation is subject to the following two conditions: (1) this device may not cause interference, and (2) this device must accept any interference that may cause undesired operation of the device.

Ignition Switch

The ignition switch is on the right side of the steering column. It has four positions:
- LOCK (0)
- ACCESSORY (I)
- ON (II)
- START (III)

LOCK (0) — You can insert or remove the key only in this position. To switch from ACCESSORY to LOCK, you must push the key in slightly as you turn it. The shift lever must also be in Park. The anti-theft lock will lock the steering column when you remove the key.

If the front wheels are turned, the anti-theft lock may sometimes make it difficult to turn the key from LOCK to ACCESSORY. Firmly turn the steering wheel to the left or to the right as you turn the key.
ACCESSORY (I) — In this position, you can operate the audio system and the accessory power sockets.

ON (II) — This is the normal key position when driving. All features and accessories on the vehicle are usable. Several of the lights on the instrument panel come on as a test when you turn the ignition switch from ACCESSORY to ON.

START (III) — Use this position only to start the engine. The switch returns to ON (II) when you let go of the key.

The engine will not start if the Immobilizer System does not recognize the key's coding (see page 90).

You will hear a reminder beeper if you leave the key in the ignition switch in the LOCK (0) or ACCESSORY (I) position and open the driver's door. Remove the key to turn off the beeper.

Power Door Locks

Each front door has a master door lock switch. Either switch locks and unlocks all doors and the tailgate. Push the switch down to lock all doors and the tailgate, and up to unlock them.
Each front door has a lock tab on the top. When you push down the lock tab on the driver’s door, all the doors and the tailgate lock. Pulling up the lock tab on the driver’s door unlocks only that door. The lock tab on the front passenger’s door locks and unlocks only that door.

To lock the front passenger’s door when getting out of the vehicle, push the lock tab down and close the door.

To lock the driver’s door, along with the remaining doors and the tailgate, push the lock tab down or push the master switch down, then close the door.

All doors and the tailgate can be locked from the outside by using the key in either front door. To unlock only the driver’s door from the outside, turn the key and release it. If you turn the key and hold it, all doors and the tailgate will unlock. All four doors and the tailgate will unlock when you unlock the passenger’s door with the key.

Lockout Prevention
If you forget and leave the key in the ignition switch, Lockout Prevention will not allow you to lock the driver’s door. With the driver’s door open and the key in the ignition, both master door lock switches are disabled. However, if the driver’s door is not open, the master door lock switches are not disabled. Pushing the switch down on the open passenger’s door will lock all doors and the tailgate. If you try to lock an open driver’s door by pushing in the lock tab, the tabs on both front doors pop out and the lock knobs on the rear sliding doors slide out. Pushing in the lock tab on the passenger’s door only locks that door.
When you push the UNLOCK button once, only the driver’s door unlocks. The remaining doors and the tailgate unlock when you push the button a second time. The parking lights, side marker lights, taillights and instrument panel lights flash twice when you push the button the first time.

When you press the UNLOCK button, the front and rear individual map lights and the cargo area light, depending on their switch positions, will come on (see page 140). If you do not open any door or the tailgate, the lights stay on for about 10 seconds, then go out. If you relock the doors and the tailgate with the remote transmitter before 10 seconds have elapsed, the lights will go off immediately.

If you unlock the doors and the tailgate with the remote transmitter, but do not open any door or the tailgate within 30 seconds, all doors and the tailgate automatically relock.

You cannot lock the doors and the tailgate with the remote transmitter if any door or the tailgate is not fully closed. You cannot lock or unlock the doors and the tailgate with the key in the ignition switch.

On EX and EX-L models
You can lock and unlock your vehicle with the remote transmitter. When you push the LOCK button, all doors and the tailgate lock. The parking lights, side marker lights, taillights and instrument panel lights flash once.
Opening or Closing the Power Sliding Doors

You can open or close each rear sliding door with the remote transmitter. The right button controls the passenger's side door and the left button controls the driver's side door.

If the power sliding door MAIN switch on the dashboard is in the OFF position, you cannot open or close the sliding doors with the remote transmitter.

Panic Mode

Panic mode allows you to remotely activate your vehicle’s horn and lights to attract attention. When activated, the horn will sound, and the headlights, parking lights, side marker lights, taillights and instrument panel lights will flash for about 30 seconds. To activate panic mode, press and hold the PANIC button for about one second.

To cancel Panic mode before 30 seconds, press any button on the remote transmitter. You can also turn the ignition switch to ON (II).

Panic mode will not activate if the ignition switch is in the ON (II) position.

CONTINUED
To replace the battery, remove the round cover on the back of the transmitter by turning it counterclockwise with a coin.

Remove the old battery and note the polarity. Make sure the polarity of the new battery is the same (+ side facing up), then insert it in the transmitter.

Reinstall the cushion ring. Align the mark on the cover with the mark on the transmitter, then set the cover in place and turn it clockwise.

Replacing the Battery

When the remote transmitter’s battery begins to get weak, it may take several pushes on the button to lock or unlock the doors and tailgate, and the LED will not light. Replace the battery as soon as possible.

Battery type: CR2025
Transmitter Care
Avoid severe shock to the transmitter, such as dropping or throwing it. Also, protect it from extreme hot or cold temperatures.

Clean the transmitter case with a soft cloth. Do not use strong cleaners or solvents that could harm the case. Immersing the transmitter in any liquid will harm the transmitter and cause it to not function properly.

If you lose a transmitter, you will need to have the replacement programmed to your vehicle’s system by your Honda dealer. Any other transmitters you have will also need to be reprogrammed.

As required by the FCC:
This device complies with Part 15 of the FCC rules. Operation is subject to the following two conditions: (1) This device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

Changes or modifications not expressly approved by the party responsible for compliance could void the user’s authority to operate the equipment.

This device complies with Industry Canada Standard RSS-210. Operation is subject to the following two conditions: (1) this device may not cause interference, and (2) this device must accept any interference that may cause undesired operation of the device.
**Childproof Door Locks**

The childproof door locks are designed to prevent children seated in the rear from accidentally opening the rear sliding doors. Each door has a lock lever near the edge. With the lever in the LOCK position, the door cannot be opened from the inside regardless of the position of the lock knob. To open the door, slide the lock knob forward and use the outside door handle.

**On EX and EX-L models**

With the childproof door locks on, automatic operation with the inside door handle is disabled.

**Tailgate**

Use your key to lock and unlock the tailgate.

On the EX and EX-L models, you can also lock and unlock the tailgate with the remote transmitter (see page 94).
To open the tailgate, pull the handle, then lift up the tailgate.

To close the tailgate, pull the tailgate down, then press down on the back edge.

The tailgate also has a lock tab on the inside. To lock the tailgate without the key or the remote transmitter, push the lock tab down and close the tailgate.

See page 253 for information on cargo loading. Keep the tailgate closed at all times while driving to avoid damaging the tailgate and to prevent exhaust gas from getting into the interior. See Carbon Monoxide Hazard on page 66.
Glove Box

Open the glove box by pulling the bottom of the handle. Close it with a firm push. Lock or unlock the glove box with the master key.

**WARNING**

An open glove box can cause serious injury to your passenger in a crash, even if the passenger is wearing the seat belt.

Always keep the glove box closed while driving.
Your Honda is equipped with dual sliding doors. Be sure all passengers are clear of the sliding doors before closing them.

Opening and Closing the Doors

To open a manual sliding door, pull the inside or outside door handle and slide the door back. It will latch in the fully-open position. To close the door, pull either handle and slide the door closed. Make sure the door is closed and latched securely before driving.

Locking the Doors

Each sliding door has a lock knob under the inside door handle. Slide the lock knob forward to unlock, and backward to lock.

When you drive with children in your vehicle, use the childproof door locks (see page 98). This will prevent children from opening the doors accidentally.

CONTINUED
A Note About Refueling
Before refueling, make sure the driver’s side sliding door is fully closed. When you release the fuel fill door, the driver’s side sliding door automatically locks so it cannot open and interfere with the fuel door. If a passenger attempts to unlock the door by cycling the lock knob several times, the door may unlock and can be opened.

If a passenger needs to get out of the vehicle while you are refueling, instruct that person to exit on the passenger’s side, not the driver’s side.

After you close the fuel fill door, the sliding door does not automatically unlock. You must unlock it manually.

Parking Facing Downhill
When parking facing downhill, make sure the manual doors are latched in the fully-open position, then hold the door open while allowing your passengers to enter or exit the vehicle. Do not pull the inside or outside door handle, or the latch will release and the door will slam shut.
Your Honda is equipped with dual power sliding doors. The doors on the EX and EX-L models are electrically powered and can be operated with the remote transmitter, the door handles, or the switches on the dashboard.

Be sure all passengers are clear of the sliding doors before closing them.

⚠️ WARNING ⚠️

Closing a power sliding door while any part of a passenger is in the door's path can cause serious injury.

Make sure all passengers are clear of the doorway before closing a sliding door.

The power sliding doors operate with the ignition switch in any position. In addition:

- The shift lever must be in Park.
- The MAIN switch on the dashboard must be in the ON position.
- The sliding door you want to operate must be unlocked.
- To open the door with the inside handle, the childproof door lock on the door you want to operate must be unlocked (see page 98).

Make sure both sliding doors are closed before you start driving.

If you shift out of Park while a door is opening, you will hear a continuous tone and the door will stop moving. If you keep driving with the door open, the tone continues until you stop and close the door.

If you shift out of Park while a door is closing, you will hear a beep until the power sliding door closes completely.

CONTINUED
The dashboard switches to the left of the steering column allow you to open or close each sliding door. The left switch controls the sliding door on the left side, and the right switch controls the sliding door on the right side.

The MAIN switch on the dashboard controls electrical power to the sliding doors. During normal operation, leave the MAIN switch in the ON position.

When the MAIN switch is off, you must operate each sliding door manually. To open or close a door, pull the inside or outside door handle and slide the door. The door will be difficult to move; this is normal. Do not use force or try to move the door rapidly, you could damage the motor.

When the MAIN switch is off, you must operate each sliding door manually. To open or close a door, pull the inside or outside door handle and slide the door. The door will be difficult to move; this is normal. Do not use force or try to move the door rapidly, you could damage the motor.

Operating the Doors With the Dashboard Switches

The dashboard switches to the left of the steering column allow you to open or close each sliding door. The left switch controls the sliding door on the left side, and the right switch controls the sliding door on the right side.
To open a door, make sure the door is unlocked. Then push and release the bottom of the switch. If you forget to unlock the door first, you will hear three beeps. Unlock the door and try again.

To close a sliding door, push and release the top of the appropriate switch.

To stop the power sliding door’s movement, push either the top or the bottom of the appropriate switch. The door will stop, and you will hear three beeps.

To start the door moving again, push the switch again: bottom to open, or top to close.

---

**Operating the Doors With the Remote Transmitter**

You can open or close each sliding door with the remote transmitter. The right button controls the passenger’s side sliding door, and the left button controls the driver’s side sliding door.

---

To open a sliding door, make sure the door is unlocked. Then press the appropriate button for at least two seconds. If you forget to unlock the door first, you will hear three beeps. Unlock the door and try again.

To close a sliding door, press the appropriate button for at least two seconds.

To stop the power sliding door’s movement, push the appropriate door button on the remote transmitter. The door will stop, and you will hear three beeps.

If you push the same button again, the door will reverse direction.

---

CONTINUED
Each power sliding door has an auto-reverse feature. If a door meets resistance while closing, it will beep three times and automatically reverse direction. However, the door may not immediately reverse direction (like some elevator doors), and the force of a closing door may cause bruising or discomfort. Always make sure passengers and any objects are well away from the power sliding doors before closing them.

With the sliding door fully-closed or fully-open, pull the outside or inside door handle, then release it.

Once the door begins to move, the door handles cannot be used to stop the door. If you need to stop the door for any reason, use the dashboard switches or the remote transmitter.

Each sliding door has a lock knob under the inside door handle. Slide the lock knob forward to unlock, and backward to lock the doors. You can also use the lock and unlock buttons on the remote transmitter.

When you drive with children in your vehicle, use the childproof door locks (see page 98). This will prevent children from opening the doors accidentally.

Sliding Doors and Obstacles

Also check that passengers, especially children, do not have their hands on the edge of the sliding door or on the door pillar. The auto-reverse feature stops working when the door is about to latch so the motor can pull the door shut.
If a person or object is in the way after the door begins to close, the door handles cannot be used to stop the door. To stop the door, use the dashboard switches or the remote transmitter.

**A Note About Refueling**
Before refueling, make sure the driver’s side sliding door is fully closed. When you release the fuel fill door, the driver’s side sliding door automatically locks so it cannot open and interfere with the fuel door. If a passenger attempts to unlock the door by cycling the lock knob several times, the door may unlock and can be opened.

If a passenger needs to get out of the vehicle while you are refueling, instruct that person to exit on the passenger’s side, not the driver’s side.

After you close the fuel fill door, the sliding door does not automatically unlock. You must unlock it manually.

**Parking Facing Downhill**
When parking facing downhill on a steep grade, the power sliding doors may not open or close as they do normally.

- Make sure the MAIN switch is in the ON position. This allows the power assist to keep the doors from slamming shut. If the MAIN switch is off, the door can slam shut and possibly injure someone.
- Make sure the power sliding doors are latched in the fully-open position, then hold the door open while allowing your passengers to enter or exit the vehicle. Do not pull the inside or outside door handle, or the latch will release and the door will close.

CONTINUED
How to Reset the Power Sliding Doors
If your vehicle’s battery is disconnected or goes dead while a sliding door is open, the power sliding door system needs to be reset. After reconnecting the battery:

- Close each sliding door completely by hand; or
- Move the MAIN switch on the dashboard to the ON position. Push and hold the top of each door switch until each sliding door closes completely.

If the power sliding doors are closed, the system will reset itself automatically once the battery has been reconnected.

If the power sliding doors do not operate properly after resetting, have your vehicle checked by a Honda dealer.

If the Power Sliding Door indicator comes on and stays on, it indicates a problem in the system. Turn the MAIN switch off to turn off the indicator. Have the system inspected by your Honda dealer as soon as possible.
Passenger Seating

**Convertible Second Row Bucket Seats**
There are bucket seats with armrests for two front passengers, bucket seats with armrests for two passengers in the second row, and a bench seat for three passengers in the third row.

For greater cargo capacity, the seats in the second row can be removed, and the bench seat in the third row can be folded into the floor.
Seats

Seat Adjustments
See pages 13 – 15 for important safety information and warnings about how to properly position seats and seat-backs.

The EX and EX-L models have a power adjustable driver’s seat. All other models have manual driver’s seat adjustments.

The front passenger’s seat, and the seats in the second and third rows adjust manually.

Make all seat adjustments before you start driving.

To adjust the seat forward and backward, pull up on the lever under the seat cushion’s front edge. Move the seat to the desired position and release the lever. Try to move the seat to make sure it is locked in position.

To adjust the bucket seats in the second row, pull up on the lever on the front of the seat bottom.
To adjust the seat-back angle of the third seat, open the tailgate. Pull on the handle on the back of the seat-back, move the seat-back to the desired position, and release the handle. Let the seat-back latch in the new position.

To change the seat-back angle of the bucket seats in the second row, pull forward on the lever on the outside of the seat-back.

To change the seat-back angle of the front seats, pull up on the lever on the outside of the seat bottom.
Make all adjustments before you start driving.

The height of your driver's seat is adjustable. Turn the front dial on the outside of the seat cushion to raise the front of the seat bottom, and turn the rear dial to raise the rear.

On LX model
The height of your driver's seat is adjustable. Turn the front dial on the outside of the seat cushion to raise the front of the seat bottom, and turn the rear dial to raise the rear.

Make all adjustments before you start driving.
**Driver's Seat Power Adjustments**

*On EX and EX-L models*

See pages 13 — 15 for important safety information and warnings about how to properly position seats and seat-backs.

The two power seat adjustment switches are on the outside edge of the seat bottom. The horizontal switch adjusts the seat bottom in several directions. The short vertical switch adjusts the seat-back angle.

You can adjust the seat with the ignition switch in any position. Make all seat adjustments before you start driving.

Push the horizontal switch forward or backward to move the seat forward or backward.

Pull up or push down on the front of the switch to move the seat bottom’s front edge up or down. Pull up or push down on the rear of the switch to move the rear of the seat bottom up or down.

CONTINUED
Pull the center of the horizontal switch up to raise the seat. Push it down to lower the seat.

Adjust the seat-back angle by pushing the rear switch in the direction you want to move.

On EX and EX-L models
Vary the lumbar support by moving the lever on the right side of the seat-back. Move the lever forward or backward to adjust the lumbar support through its full range.
Armrests

An armrest is located on each of the front seats and on each side of the second row seats. Pivot it down to use it. When you remove the bucket seats in the second row, pivot the armrests up out of the way.

Head Restraints

See page 16 for important safety information and a warning about how to properly position the head restraints.

Your vehicle is equipped with head restraints in all seating positions.

The head restraints help protect you and your passengers from whiplash and other injuries. They are most effective when you adjust them so the back of the occupant’s head rests against the center of the restraint. A taller person should adjust the restraint as high as possible.

The head restraints adjust for height. You need both hands to adjust the restraint. Do not attempt to adjust it while driving. To raise it, pull upward. To lower the restraint, push the release button sideways and push the restraint down.

CONTINUED
To remove a head restraint for cleaning or repair, pull it up as far as it will go. Push the release button and pull the restraint out of the seat-back.

**Third Seat Access**

To get into or out of the third row seat, walk between the second row seats.

When the seat on the passenger’s side is moved to the center, walk through the passenger’s side to get into or out of the third row seat.
The second row bucket seat on the passenger's side can be moved to the center to provide access to the third row seat.

Remove the two floor covers between the bucket seats in the second row by carefully prying on the back edge of the covers with a flat-tipped screwdriver.

Unlock the seat from the floor by pulling the lock release lever under the seat cushion's front edge and lifting the rear of the seat.

Slide the seat toward the center of the vehicle.

Push the back of the seat down over the floor hooks. Make sure the seat is securely locked in place.
Install the floor covers over the outer floor hooks on the passenger’s side as shown.

Make sure the seat is securely locked in place before driving. A seat that is not locked in place could fly around and cause injury in a sudden stop or crash.

Reverse this procedure to move the seat back to the outside.
Unhook the front of the seat from the floor by pulling it back slightly, then pivoting it upward.

Both seats can be removed to give more cargo capacity.

To remove a seat:
Pull up the seat-back angle adjustment lever, and fold the seat-back forward.
Unlock the seat from the floor by pulling the lock release lever under the seat cushion's front edge and lifting the rear of the seat.

Unhook the front of the seat from the floor by pulling it back slightly, then pivoting it upward.

Always remove an unlocked seat from the vehicle before driving. A seat that is not locked in place could fly around and cause injury in a sudden stop or crash.

To reinstall the seat, hook the front of the seat to the floor, then push the back into the locks. Make sure both the front and the back of the seat are securely latched before driving.
Folding the Third Row “Magic Seat”

To create more cargo space, you can fold the third row “Magic Seat” into the floor recess. To fold the seat:

1. Remove the head restraints by pushing the release buttons and pulling the restraints out.

2. Store the head restraints in the side cargo net. To install the side cargo net, hook the four loops on the net to the tabs on the left side panel.

Make sure the head restraint legs are inside the cargo net so they do not damage the seat as you fold it.

3. Unlock the seat-back by pulling the handle. Push the seat-back forward.

120 Instruments and Controls
Make sure the center shoulder belt is stored in the holder and the outer shoulder belts are positioned on each hook whenever the third seat is folded.

Make sure all items in the cargo area are secured. Loose items can fly forward and cause injury if you have to brake hard. See *Carrying Cargo* on page 253.

4. Pull the handle on the back of the seat cushion while you pull the entire seat towards you with the strap. Pivot the seat into the floor recess. Make sure the strap is above the seat.

To return the seat to the upright position:

1. Pull the seat out of the recess by pulling on the handle and the strap. Pivot the seat forward all the way.

CONTINUED
2. Pull up on the handle on the seat-back, and pull the seat-back upright with the strap. Make sure the seat is securely locked in place.

3. Reinstall the head restraints.
The HI or LO indicator lights and remains lit until you turn it off by pushing the opposite side of the switch lightly. The indicator will turn off.

In HI, the heater turns off when the seat gets warm, and turns back on after the seat’s temperature drops. It continues to cycle as long as you leave it set on HI. The HI indicator remains lit as a reminder that you have the heater on.

In LO, the heater runs continuously. It does not cycle with temperature changes.

Follow these precautions whenever you use the seat heaters:

- Use the HI setting only to heat the seats quickly. Select the LO setting when the seats feel warm. The HI setting draws large amounts of current from the battery.

- Do not use the seat heaters, even on the LO setting, if the engine is left idling for an extended period. They can weaken the battery, causing hard starting.

Because of the sensors for the side airbag system, there is no heater in the passenger’s seat-back.

On EX-L model
Both front seats are equipped with seat heaters. The ignition switch must be ON (II) to use them. The seat heater switch is located on each front door. Push the front of the switch, HI, to rapidly heat up the seat. After the seat reaches a comfortable temperature, select LO by pushing the back of the switch. This will keep the seat warm.
Your vehicle’s front windows are electrically-powered. Turn the ignition switch to ON (II) to raise or lower either window.

The rear windows are also electrically-powered (see page 127).

Each front door has a switch that controls its window. To open the window, push the switch down and hold it. Release the switch when you want the window to stop. Close the window by pulling back on the switch and holding it.

The driver’s door armrest has a master power window control panel. To open the front passenger’s window, push down on the switch and hold it down until the window reaches the desired position. To close the window, pull back on the window switch. Release the switch when the window gets to the position you want.
The master control panel also contains these extra features:

**AUTO** — To open the driver's window fully, push the window switch firmly down, then release it. The window automatically goes down all the way. To stop the window from going all the way down, pull back on the window switch briefly.

To close the driver's window fully, pull back the window switch firmly, then release it. The window automatically goes all the way up. To stop the window from going all the way up, push down on the window switch briefly.

To open or close the driver's window partially, push down or pull back on the window switch lightly and hold it. The window will stop when you release the switch.

The MAIN switch controls power to the front passenger's window and the rear power windows. With this switch off, the front passenger's window cannot be raised or lowered and the rear windows cannot be opened or closed. The MAIN switch does not affect the driver's window. Keep the MAIN switch off when you have children in the vehicle so they do not injure themselves by operating the windows unintentionally.

---

**WARNING**

Closing a power window on someone’s hands or fingers can cause serious injury.

Make sure your passengers are away from the windows before closing them.
Auto Reverse
If the driver’s window runs into any obstacle while it is closing automatically, it will reverse direction, and then stop. To close the window, remove the obstacle, then use the window switch again.

Auto reverse stops sensing when the window is almost closed. You should always check that all passengers and objects are away from the window before closing it.

If your vehicle’s battery is disconnected or goes dead, or the driver’s window fuse is removed, the AUTO function will be disabled. The power window system needs to be reset after reconnecting the battery or installing the fuse. You should do the following.

1. Start the engine. Push down on the driver’s window switch until the window is fully open.

2. Pull back on the driver’s window switch to close the window completely, then hold the switch for a second or two more.

If the power windows do not operate properly after resetting, have your vehicle checked by a Honda dealer.

The power window system has a key-off delay function. The windows will still operate for up to ten minutes after you turn off the ignition. Opening either front door cancels the delay function. You must turn the ignition switch ON (II) again before you can operate the windows.
You can open or close each rear window with the switches on the driver’s door armrest. The right switch controls the passenger’s side rear window and the left switch controls the driver’s side window. To open the window, push the switch down and hold it. Release the switch when you want the window to stop. Close the window by pulling back on the switch and holding it.
Keep the inside and outside mirrors clean and adjusted for best visibility. Be sure to adjust the mirrors before you start driving.

The inside mirror has day and night positions. The night position reduces glare from headlights behind you. Flip the tab on the bottom edge of the mirror to select the day or night position.

Adjusting the Power Mirrors

Adjust the outside mirrors with the adjustment switch on the left side of the dashboard:

1. Turn the ignition switch ON (II).
2. Move the selector switch to L (driver’s side) or R (passenger’s side).

3. Push the appropriate edge of the adjustment switch to move the mirror right, left, up, or down.
4. When you finish, move the selector switch to the center (off) position. This turns off the adjustment switch so you can’t move a mirror out of position by accidentally bumping the switch.
**Canadian Models**
The outside mirrors are heated to remove fog and frost. With the ignition switch ON (II), turn on the heaters by pressing the button. The light in the button comes on as a reminder. Press the button again to turn the heaters off.

**Parking Brake**
To apply the parking brake, push the parking brake pedal down with your foot. To release the parking brake, push on the pedal again. The parking brake light on the instrument panel should go out when the parking brake is fully released with the engine running. (see page 72.)

**NOTICE**
Driving the vehicle with the parking brake applied can damage the rear brakes and axles.
Digital Clock

On models without navigation system

The digital clock displays the time with the ignition switch in any position.

To set the clock:

1. Turn the ignition switch ON (II).

2. Press and hold the H button until the hour advances to the desired time.

3. Press and hold the M button until the numbers advance to the desired time.

You can use R to quickly set the time to the nearest hour. If the displayed time is before the half hour, pressing R sets the clock back to the previous hour. If the displayed time is after the half hour, pressing R sets the clock forward to the beginning of the next hour.

For example:

- 1:06 would RESET to 1:00.
- 1:52 would RESET to 2:00.

Center Table

To use the center table, pull up the outside edge of the table until it latches. To store it, pull the lever and lower the table.
The center table can be extended by pulling on the rear.

Sitting on or getting under the table, or putting heavy objects on the table, may damage or deform it.

Do not put any items on the table while driving. They may fall down or fly around when you go around corners or brake hard.
To use the front beverage holder, pull on the bottom edge. Push the holder all the way in to close it.

Additional beverage holders for the front seat passengers, and beverage holders for the passengers in the second row, are in the center table.
Each second row seat has a beverage holder on the outside of the seat cushion. To use the beverage holder, push on the tab. The beverage holder will swing open. To close, pivot it up and push it in until it latches.

To protect the beverage holder, the bottom tray is designed to break away if you try to place a heavy object on it. If this happens, hold the edge of the bottom tray and pull it up until you feel a detent.

Be careful not to damage an open beverage holder when you get into or out of the vehicle.

The beverage holders for the third seat passengers are located in the armrests on the rear side panels. The inner liner can be removed if you want to hold a larger cup.

Be careful when you are using the beverage holder. A spilled liquid that is very hot can scald you or your passengers. Spilled liquids can also damage the upholstery, carpeting, and electrical components in the interior.
To open the sunglasses holder, push on the front edge. It will unlatch and swing down. To close it, push it until it latches. Make sure the holder is closed while you are driving.

To use the sun visor, pull it down. You can also use the sun visor at the side window. Remove the support rod from the clip and swing the sun visor toward the side window. In this position, the sun visor can be extended by sliding out the extension.

Some larger styles of sunglasses may not fit in the holder.
Make sure you put the sun visor back in place when you are getting into or out of the vehicle. Do not use the sun visor extension over the rear view mirror.

Vanity Mirror

To use a vanity mirror on the back of the sun visor, pull up the cover.

The lights beside the mirror come on only when the parking lights are on.

Rear Compartment

A storage compartment is located by the third seat on the driver’s side. To open the compartment, pull the lever and lift the lid. To close, lower the lid and push it down until it latches.
# Center Pocket, Coin Holder

**Center Pocket**

Open the center pocket by pulling the handle. Close it with a firm push.

*On EX and EX-L models*

The light in the pocket comes on when the instrument panel lights are on.

**Coin Holder**

*On U.S. EX-L with optional Rear Entertainment System*

Push up the handle to open the center pocket.

The coin holder is located in the front beverage holder. To open it, pull on the bottom edge. Close it with a firm push.
To remove the box for cleaning, push on the lock tab under the seat bottom and pull the tray out. Do not try to force the box. You could damage it.

To use a coat hook, push on the lid. Close it with a firm push. Make sure the coat hook is closed when you are not using it. This hook is not designed for large or heavy items.

Storage Box

On EX and EX-L models (Except for vehicles with navigation System)
A storage box is located under the front passenger’s seat. To use it, pull the handle and slide the box out.

Coat Hook

STORAGE BOX

LOCK TAB

LID
Your vehicle has two accessory power sockets. The front accessory power socket is located under the center pocket. The rear socket is behind the third seat on the driver's side.

To use an accessory power socket, pull out on the cover. These sockets are intended to supply power for 12 volt DC accessories that are rated 120 watts or less (10 amps). To power an accessory, the ignition switch must be in ACCESSORY (I) or ON (II).

When both sockets are being used, the combined power rating of both accessories should be 120 watts or less (10 amps).

The sockets will not power an automotive type cigarette lighter element.
Light Control Switch

The light control switch controls the interior lights: the individual map lights by the sun visors, the individual map lights above the second and third row passengers, and the cargo area light. This switch has three positions: OFF, Door Activated, and ON.

When this switch is in the OFF position:
- None of the lights come on when a door or the tailgate is opened.
- The individual map lights in the front can be turned on and off with the switches next to the lights.
- The individual map lights in the second and third rows cannot be turned on.
- The cargo area light can be turned on with the switch in the light.

When the switch is in the Door Activated position:
- The individual map lights in the front come on when any door or the tailgate is opened. When the doors and the tailgate are closed, each light can be turned on and off with the switch next to the light.
- The individual map lights in the second and third rows come on when any door or the tailgate is opened. When the doors and the tailgate are closed, each light can be turned on and off by pushing on the lens.

CONTINUED
• The cargo area light comes on when any door or the tailgate is opened if the switch in the light is in the door activated (center) position. When the doors and the tailgate are closed, it can be turned on with the switch in the light.

When the switch is in the ON position:

• All the individual map lights come on and stay on as long as the switch remains in the ON position.

• The cargo area light comes on and stays on if the switch in the light is in the door activated (center) position.

On EX and EX-L models

The lights go out about six seconds after all the doors and the tailgate are closed.

With the light control switch in the Door Activated position, all the individual map lights and the cargo area light (with the switch in the center position) come on when you unlock the door with the remote transmitter (see page 94).

With any door or the tailgate left open, the lights stay on about three minutes, then go out.
**Individual Map Lights**

Turn on the front individual map lights by pushing the button next to each light. Push the button again to turn it off. You can also operate these lights with the light control switch (see page 139).

**Cargo Area Light**

The cargo area light has a three-position switch. In the OFF position, the light does not come on. In the center position, it comes on when you open the tailgate. In the ON position, it stays on continuously.

This light also works with the light control switch (see page 139).

**Interior Lights**

Turn on each rear individual map light by pushing the lens when the ignition switch is in the ACCESSORY (I) or ON (II) position. Push the lens again to turn it off. You can also operate these lights with the light control switch (see page 139).
The ignition switch light comes on when you open the driver's door, and stays on several seconds after you close the door.

Proper use of the Heating and Cooling system can make the interior dry and comfortable, and keep the windows clear for the best visibility.

What Each Control Does

**Fan Control Dial**
Turning this dial clockwise increases the fan’s speed, which increases air flow.

**Temperature Control Dials**
Turning this dial clockwise increases the temperature of the air flow.

**Air Conditioning (A/C) Button**
This button turns the air conditioning ON and OFF. The indicator above the button lights when the A/C is on.

**Recirculation Button**
This button controls the source of the air going into the system. When the indicator above this button is lit, air from the vehicle’s interior is sent through the system again (Recirculation mode). When the indicator is off, air is brought in from outside the vehicle (Fresh Air mode).

**Rear Window Defogger Button**
This button turns the rear window defogger on and off (see page 87).

**Rear A/C Control Dial**
With this dial, you can adjust the rear A/C unit heating, cooling, and air flow (see page 166).
Mode Buttons
Use the MODE buttons to select the vents the air flows from. Some air will flow from the dashboard corner vents in all modes.

- Air flows from the center and corner vents in the dashboard.
- Air flow is divided between the vents in the dashboard and the floor vents.
- Air flows from the floor vents.
- Air flow is divided between the floor vents and the defroster vents at the base of the windshield.
- Air flows from the defroster vents at the base of the windshield.

When you select the system automatically switches to Fresh Air mode and turns on the A/C.
In these two modes, the A/C stays on.

When you select , the system automatically switches to Fresh Air mode.
The vents in the corners of the dashboard can be opened and closed with the dials next to them.

You can adjust the direction of the air coming from the dashboard vents by moving the tab in the center of each vent up-and-down and side-to-side.

There are four vents in the ceiling (see page 168).
How to Use the System
This section covers how to set up the system controls for ventilation, heating, cooling, dehumidifying, and defrosting.

The engine must be running for the heater and air conditioning to generate hot and cold air. The heater uses engine coolant to warm the air. If the engine is cold, it will be several minutes before you feel warm air coming from the system. The air conditioning does not rely on engine temperature.

It is best to leave the system in Fresh Air mode under almost all conditions. Keeping the system in Recirculation mode, particularly with the A/C off, can cause the windows to fog up. Switch to Recirculation mode when you are driving through smoky or dusty conditions, then switch back to Fresh Air mode when the condition clears.

**Ventilation**
The flow-through ventilation system draws in outside air, circulates it through the interior, then exhausts it through vents near the rear side panels.

1. Turn the temperature control dial all the way to the left. Make sure the A/C is off.
2. Select and Fresh Air mode.
3. Set the fan to the desired speed.

CONTINUED
To Cool with A/C
1. Turn on the A/C by pressing the button. The light above the button comes on when a fan speed is selected.
2. Make sure the temperature control dial is all the way to the left.
3. Select ![Fan](image)
4. If the outside air is humid, select Recirculation mode. If the outside air is dry, select Fresh Air mode.
5. Set the fan to the desired speed.

If the interior is very warm from being parked in the sun, you can cool it down more rapidly by setting up the controls this way:

1. Start the engine.
2. Turn on the A/C by pressing the button. Make sure the temperature control dial is turned all the way to the left.
3. Set the fan to maximum speed.
4. Open the windows partially. Select ![Fan](image) and Fresh Air mode.

When the interior has cooled down to a more comfortable temperature, close the windows and set the controls as described for normal cooling.

Air conditioning places an extra load on the engine. Watch the engine coolant temperature gauge (see page 79) when driving in stop-and-go traffic or climbing a long, steep hill. If it moves near the red zone, turn off the A/C until the gauge reads normally.
Heating and Cooling

To Heat

To warm the interior:

1. Start the engine.
2. Select 🌡️. When you select 🌡️, the system automatically switches to Fresh Air mode.
3. Set the fan to the desired speed.
4. Adjust the warmth of the air with the temperature control dial.

To Heat and Dehumidify with Air Conditioning

Air conditioning, as it cools, removes moisture from the air. When used in combination with the heater, it makes the interior warm and dry.

1. Set the fan to the desired speed.
2. Turn on the air conditioning.
3. Select 🌡️ and Fresh Air mode.
4. Adjust the temperature control dial so the mixture of heated and cooled air feels comfortable.

This setting is suitable for all driving conditions whenever the outside temperature is above 32°F (0°C).

To Defog and Defrost

To remove fog from the inside of the windows:

1. Set the fan to the desired speed.
2. Select 🌡️. When you select 🌡️, the system automatically switches to Fresh Air mode and turns on the A/C.
3. Adjust the temperature control dial so the air flow from the defroster vents feels warm.
4. Turn on the rear window defogger to help clear the rear window. When you switch to another mode from 🌡️, the A/C stays on. Press the A/C button to turn it off.

CONTINUED
To remove exterior frost or ice from the windshield and side windows after the vehicle has been sitting out in cold weather:

1. Start the engine.
2. Select 🌬️. When you select 🌬️, the system automatically switches to Fresh Air mode and turns on the A/C.
3. Set the fan and temperature controls to maximum.

To rapidly remove exterior frost or ice from the windshield (on very cold days), first select the Recirculation mode. Once the windshield is clear, select the Fresh Air mode to avoid fogging the windows.
For safety, make sure you have a clear view through all the windows before driving away.

These settings direct all the air flow to the defroster vents at the base of the windshield and the side window defroster vents. The air flow will get warmer and clear the windows faster as the engine warms up. You can close the corner vents with the dial beside each vent. This will send more warm air to the windshield defroster vents.

To Turn Everything Off
To shut off the system temporarily, turn the fan speed and temperature control dials all the way to the left.

You should shut the system completely off only for the first few minutes of driving in cold weather, until the engine coolant warms up enough to operate the heater. Keep the fan on at all other times so stale air does not build up in the interior.
For the climate control system to provide heating and cooling, the engine must be running.

*On EX and EX-L models*

The automatic climate control system in your Honda picks the proper combination of air conditioning, heating, and ventilation to maintain the interior temperature you select. The system also adjusts the fan speed and air flow levels.

Your vehicle also has a rear A/C unit that allows the rear passengers to adjust the heating, cooling, and air flow (see page 166).

The direction of air flow from the vents in the center and each corner of the dashboard is adjustable. Move the tab in the center of each vent up-and-down and side-to-side.

The corner vents can be opened and closed with the dials next to them.

There are four vents in the ceiling (see page 168).

The climate control system draws air through the exterior vents at the bottom of the windshield. Keep these vents clear of leaves and other debris.

For the climate control system to provide heating and cooling, the engine must be running.
**EX model and EX-L model without Navigation System**

**Fully-automatic Operation**

To put the Automatic Climate Control in fully-automatic mode, press the AUTO button and set the fan control dial to AUTO, then set the desired temperature by turning the temperature control dial. You will see FULL AUTO in the system’s display. The light above the button also shows you which mode, Recirculation or Fresh Air, is selected.

The system automatically selects the proper mix of conditioned and/or heated air that will, as quickly as possible, raise or lower the interior temperature from its current level to the set temperature.
When you set the temperature to its lower limit (60°F/18°C) or its upper limit (90°F/32°C), the system runs at full cooling or heating only. It does not regulate the interior temperature. When the temperature is set between the lower and upper limits, the system regulates the interior temperature to the set value.

Pressing the OFF button shuts the climate control system completely off. Keep the system completely off only for short periods. To keep stale air and mustiness from collecting, you should have the fan running at all times.
Semi-automatic Operation
You can manually select various functions of the Climate Control system when it is in FULL AUTO. All other features remain automatically controlled. Making any manual selection causes the word FULL to go out.

**Air Conditioning (A/C) Button**
Press the A/C button to turn the air conditioning on and off. You will see A/C ON or A/C OFF in the display.

When you turn the A/C off, the system cannot regulate the inside temperature if you set the dial below the outside temperature. With the A/C on, use the temperature control dial to adjust the temperature of the air flow to a comfortable setting.

Recirculation Button
This button controls the source of the air going into the system. When the indicator above this button is lit, air from the vehicle’s interior is sent through the system again (Recirculation mode). When the indicator is off, air is brought in from outside the vehicle (Fresh Air mode).

You can, for example, manually put the system in recirculation mode when driving through an area of smoke or fumes.
**Fan Control Dial**
You can manually select the fan speed by turning the fan control dial. When you turn the dial clockwise, the fan is taken out of automatic mode and starts to run at its lowest speed. Turning the dial fully clockwise increases the fan’s speed, which increases air flow.

**Rear A/C Control Dial**
With this dial, you can adjust the rear A/C unit heating, cooling, and air flow (see page 166).

**Mode Button**
Use the MODE button to select the vents the air flows from. Some air will flow from the dashboard corner vents in all modes. Each time you press the MODE button, the display shows the mode selected. Press the button four times to see all the modes.

CONTINUED
The main air flow is divided between the floor vents and defroster vents at the base of the windshield.

The main air flow comes from the floor vents.

The main air flow is divided between the dashboard vents and the floor vents.

The main air flow comes from the dashboard vents.
The button directs the main air flow to the windshield for faster defrosting. It also overrides any MODE selection you may have made.

When you select , the A/C turns on automatically and the system selects Fresh Air mode. If the fan control dial is in AUTO, the fan speed increases automatically. If it is not in AUTO, manually increase the fan speed or set the dial to AUTO. You can increase air flow to the windshield by closing the side vents in the dashboard.

When you turn off by pressing the button again, the system returns to its former settings.

**Rear Window Defogger Button**
This button turns the rear window defogger on and off (see page 87).
To put the Automatic Climate Control in fully-automatic mode, press the AUTO button. Then set the desired temperature by pressing either side of the TEMP button: ▲ to raise the temperature above the displayed value, or ▼ to lower the temperature.

The system automatically selects the proper mix of conditioned and/or heated air that will, as quickly as possible, raise or lower the interior temperature from its current level to the set temperature.

When you set the temperature to its lower limit (60°F/18°C) or its upper limit (90°F/32°C), the system runs at full cooling or heating only. It does not regulate the interior temperature. When the temperature is set between the lower and upper limits, the system regulates the interior temperature to the set value.

In cold weather, the fan will not come on automatically until the vehicle has been driven for a short time and the heater starts to develop warm air.

Pressing the OFF button shuts the climate control system completely off. Keep the system completely off only for short periods. To keep stale air and mustiness from collecting, you should have the fan running at all times.
**Semi-automatic Operation**
You can manually select various functions of the Climate Control system when it is in FULL AUTO. All other features remain automatically controlled. Some of these functions appear in the Navigation System display. Press the A/C button next to the display to show these functions.

**Air Conditioning (A/C) Buttons**
Pressing “ON” or “OFF” in the display turns the air conditioning on and off. You will see A/C ON or A/C OFF activated in the display.

When you turn the A/C off, the system cannot regulate the inside temperature if you set it below the outside temperature. With the A/C on, use the temperature buttons to adjust the temperature of the air flow to a comfortable setting.
**Recirculation Button**
This button controls the source of the air going into the system. When the indicator above this button is lit, air from the vehicle’s interior is sent through the system again (Recirculation mode). When the indicator is off, air is brought in from outside the vehicle (Fresh Air mode). You can, for example, manually put the system in recirculation mode when driving through an area of smoke or fumes.

**Fan Control Icons**
You can manually select the fan speed by pressing any of the fan control icons.

**Mode Icons**
Use the MODE icons to select the vents the air flows from. Some air will flow from the dashboard corner vents and the side vents in all modes.
The main air flow is divided between the floor vents and defroster vents at the base of the windshield.

The main air flow comes from the floor vents.

The main air flow is divided between the dashboard vents and the floor vents.

The main air flow comes from the dashboard vents.
The button directs the main air flow to the windshield for faster defrosting. It also overrides any MODE selection you may have made.

When you select , the A/C turns on automatically and the system selects Fresh Air mode. For faster defrosting, manually set the fan speed to high. You can also increase air flow to the windshield by closing the side vents in the dashboard.

When you turn off by pressing the button again, the system returns to its former settings.

**Rear Window Defogger Button**
This button turns the rear window defogger on and off (see page 87).
The climate control system has two sensors. A sunlight sensor is located in the top of the dashboard and a temperature sensor is next to the steering column. Do not cover the sensors or spill any liquid on them.
Rear A/C Unit
Your vehicle has two controls for the rear A/C unit. The rear A/C control dial is located on the climate control panel, and the rear A/C passenger control panel is on the ceiling behind the driver’s seat.

You can adjust the heating, cooling, and air flow of the rear A/C unit with these control dials. The rear passengers can also adjust the direction and the amount of air flow with the rear ceiling vents.

166  Comfort and Convenience Features
When this dial is in the OFF position, no air flows to the rear vents, and the rear control panel is turned off.

Turning the dial counterclockwise from the OFF position increases the rear fan speed and air flow. The air flows from the rear ceiling vents.

When this dial is in the RR position, the rear A/C passenger control panel is enabled. A second row passenger can then adjust the fan speed and air flow.

Turning the dial clockwise from the RR position turns off the rear A/C passenger control panel, and increases the rear fan speed. The air flows from the rear floor vents.

When the rear A/C control dial on the front panel is in the RR position, the passenger in the second row can use the rear A/C passenger control panel to adjust the fan speed and air flow.

The fan speed control dial changes the speed of the rear fan; turn it clockwise to increase fan speed and air flow.

CONTINUED
The heating/cooling/air flow control dial selects the temperature and level of the air flow. When the dial is in the position, heated air flows from the rear floor vents. When the dial is in the position cooled air flows from the rear ceiling vents. Cooled air can be selected when the A/C switch on the front control panel is turned on.

The direction and quantity of air flow from each rear ceiling vent is adjustable.

To adjust the direction of the air coming from a rear ceiling vent, move the tab in the center of each vent back-and-forth, and rotate the vent with the tab. The lever next to each vent can be opened and closed to regulate the amount of air flow.
AM/FM/Cassette Stereo Audio System

On LX model

Your Honda’s audio system provides clear reception on both AM and FM bands, while the preset buttons allow you to easily select your favorite stations.

The cassette system features Dolby® noise reduction, automatic sensing of chromium-dioxide (CrO₂) tape, and autoreverse for continuous play.

* Dolby noise reduction manufactured under license from Dolby Laboratories Licensing Corporation. “DOLBY” and the double-D symbol are trademarks of Dolby Laboratories Licensing Corporation.
Audio System

Operating the Radio
The ignition switch must be in ACCESSORY (I) or ON (II) to operate the audio system. Turn the system on by pushing the PWR/VOL knob.

Adjust the volume by turning the PWR/VOL knob.

The band and frequency that the radio was last tuned to is displayed. To change bands, press the AM/FM button. On the FM band, ST will be displayed if the station is broadcasting in stereo. Stereo reproduction on AM is not available.

You can use any of four methods to find radio stations on the selected band: TUNE, SEEK, SCAN or the Preset buttons.

**TUNE** — Use the TUNE bar to tune the radio to a desired frequency. Press the upper part (▲) to tune to a higher frequency, or the lower part (▼) to tune to a lower frequency. The frequency numbers will start to change rapidly. Release the bar when the display reaches the desired frequency. To change the frequency in small increments, press and release the TUNE bar quickly.

**SEEK** — The SEEK function searches the band for a station with a strong signal. To activate it, push the SEEK switch up or down, then release it. Depending on which way you push the switch, the system scans upward or downward from the current frequency. It stops when it finds a station with a strong signal.
SCAN — The SCAN function samples all the stations with strong signals on the selected band. To activate it, press the SCAN button, then release it. SCN shows in the display. The system will scan up the band for a station with a strong signal. When it finds a strong signal, it will stop and play that station for approximately five seconds. If you do nothing, the system will then scan for the next strong station and play that for five seconds. When it plays a station that you want to continue listening to, press the SCAN button again.
Preset — You can store the frequencies of your favorite radio stations in the six preset buttons. Each button will store one frequency on the AM band, and two frequencies on the FM band.

To store a frequency:

1. Select the desired band, AM or FM. FM1 and FM2 let you store two frequencies with each preset button.

2. Use the TUNE or SEEK function to tune the radio to a desired station.

3. Pick the Preset button you want for that station. Press the button and hold it until you hear a beep.

4. Repeat steps 1 to 3 to store a total of six stations on AM and twelve on FM.

Once a station’s frequency is stored, simply press and release the proper Preset button to tune to it.

The preset frequencies will be lost if your vehicle’s battery goes dead, is disconnected, or the radio fuse is removed.
Adjusting the Sound Balance/Fader — These two controls adjust the strength of the sound coming from each speaker. The Balance control adjusts the side-to-side strength, while the Fader control adjusts the front-to-back strength.

To adjust the fader, push on the BASS/FADER control knob to get it to pop out. Pull it out slightly farther, and adjust the front-to-back sound to your liking. Push the knob back in when you are done so you cannot change the setting by accidentally bumping it.

To adjust the balance, push on the TREBLE/BALANCE control knob to get it to pop out. Pull it out slightly farther, and adjust the side-to-side sound to your liking. Push the knob back in when you are done so you cannot change the setting by accidentally bumping it.

Treble/Bass — Use these controls to adjust the tone to your liking.

To adjust the Treble level, push on the TREBLE/BALANCE control knob to get it to pop out. Without pulling it out farther, turn the knob to adjust the treble level. Push the knob back in when you are done so you cannot change the setting by accidentally bumping it.

To adjust the Bass level, push on the BASS/FADER control knob to get it to pop out. Without pulling it out farther, turn the knob to adjust the bass level. Push the knob back in when you are done so you cannot change the setting by accidentally bumping it.

Radio Frequencies and Reception
For information, see page 187.
Audio System

Audio System Lighting
You can use the instrument panel brightness control knob to adjust the illumination of the audio system (see page 83). The audio system illuminates when the parking lights are on, even if the radio is turned off.

Operating the Cassette Player
Turn the audio system ON. Make sure the tape opening on the cassette is facing to the right, then insert the cassette most of the way into the slot. The system will pull it in the rest of the way, and begin to play.

The tape direction indicator will light to show you which side of the cassette is playing. The ▲ indicates the side you inserted facing upward is now playing. If you want to play the other side, press the PROG button.

Dolby noise reduction turns on when you insert a cassette. If the tape was not recorded with Dolby noise reduction, turn it off by pressing the ■ button.

When the system reaches the end of the tape, it will automatically reverse direction and play the other side. If you want to remove the cassette from the drive, press the EJECT button.

Tape Search Functions
With a cassette playing, you can use the FF, REW, SKIP, or REPEAT function to find a desired program.

FF/REW — Fast Forward and Rewind move the tape rapidly. To rewind the tape, push the REW button. You will see REW in the display. To fast forward the tape, push the FF button. You will see FF displayed. Press the PLAY button to take the system out of rewind or fast forward.

If the system reaches the end of the tape while in fast forward or rewind, it automatically stops that function, reverses direction, and begins to play.

SKIP — The Skip Function allows you to find the beginning of a song or passage. To find the beginning of the song or passage currently playing, push the SKIP switch down. You will see REW flashing in the display as the tape rewinds. To find the beginning of the next song, push the SKIP switch up. You will see FF flashing in the display as the tape fast forwards. When the system finds the beginning of a song or passage, it goes back to PLAY mode.

Audio System

Comfort and Convenience Features
**REPEAT** — The Repeat function continuously replays the current song or passage. Press the RPT button to activate it; you will see RPT displayed as a reminder. When the system reaches the end of the song or passage currently playing, it will automatically go into rewind. When it senses the beginning of the same song or passage, the system returns to PLAY mode. It will continue to repeat this same program until you deactivate REPEAT by pressing the button again.
The SKIP and REPEAT functions use silent periods on the tape to find the end of a song or passage. These features may not work to your satisfaction if there is almost no gap between selections, a high noise level between selections, or a silent period in the middle of a selection.

Caring for Cassettes
Damaged cassettes can jam inside the drive or cause other problems. See page 198 for information on cassette care and protection.
Operating the Optional CD Player/Changer

A Compact Disc changer is available from your dealer. It holds up to six discs, providing several hours of continuous entertainment. You operate the CD changer with the same controls used for the radio and cassette player.

Your dealer also has an accessory in-dash single CD player available that is operated by the radio controls. To operate this unit, use the instructions (except for those relating to multiple discs) in this section.

Using the instructions that came with the changer, load the desired CDs in the magazine, and load the magazine in the changer. Play only standard round discs. Odd-shaped CDs may jam in the drive or cause other problems.
For best results when using CD-R discs, use only high quality discs labeled for audio use. When recording a CD-R, the recording must be closed in order for the disc to be used by CD players. CD-RW discs will not work in this unit.

To operate the CD changer or player, the ignition must be in ACCESSORY (I) or ON (II) and the audio system must be on.

Press the CD button until “CD” appears in the display. The system will start to play the first track of the first disc in the magazine. Play only standard round discs.

When that disc ends, the next disc in the magazine is loaded and played. After the last disc finishes, the system returns to disc 1.

To select a different disc, press the appropriate preset button (1 – 6). If you select an empty slot in the magazine, the changer will, after finding that slot empty, try to load the CD in the next slot. This continues until it finds a CD to load and play.

You can use the SKIP switch to select tracks within a disc. If you push and release the SKIP switch, the system will move to the beginning of a track. Push the switch up to move to the beginning of the next track, and push the switch down to move to the beginning of the current track.

If you push and hold the SKIP switch, you will hear a beep and the system will continue to move across tracks. Release the switch when you think it has reached the desired place on the disc.

To select a different disc, press the appropriate preset button (1 – 6). If you select an empty slot in the magazine, the changer will, after finding that slot empty, try to load the CD in the next slot. This continues until it finds a CD to load and play.

You can use the SKIP switch to select tracks within a disc. If you push and release the SKIP switch, the system will move to the beginning of a track. Push the switch up to move to the beginning of the next track, and push the switch down to move to the beginning of the current track.

If you push and hold the SKIP switch, you will hear a beep and the system will continue to move across tracks. Release the switch when you think it has reached the desired place on the disc.

**REPEAT** — When you activate the Repeat feature by pressing the RPT button, the system continuously replays the current track. You will see RPT in the display as a reminder. Press the RPT button again to turn it off.

**RANDOM PLAY** — This feature, when activated, plays the tracks on a CD in random order, rather than in the order they are recorded on the CD. To activate Random Play, press and hold the RPT button until you see RDM in the display. The system will then select and play tracks randomly on the current disc. When all tracks on that disc have been played, the next disc is loaded and played randomly. This continues until you deactivate Random Play by pressing RPT again.
If the system is in Repeat mode, you must turn it off by pressing RPT before you can select Random Play. Then press the button again until you see RDM displayed.

To take the system out of CD mode, press the AM/FM button or insert a cassette in the player. If a tape is already in the cassette player, press the TAPE button. When you return to CD mode, play will continue at the same disc and track.

If you turn the system off while a CD is playing, either with the PWR/VOL knob or the ignition switch, play will continue at the same disc and track when you turn it back on.

**Protecting Compact Discs**
For information on how to handle and protect compact discs, see page 192.
If you see an error indication in the display while operating the CD changer, find the cause in the chart to the right. If you cannot clear the error indication, take the vehicle to your Honda dealer.

<table>
<thead>
<tr>
<th>Indication</th>
<th>Cause</th>
<th>Solution</th>

AM/FM/CD Audio System

On EX and EX-L models
Your Honda’s audio system provides clear reception on both AM and FM bands, while the preset buttons allow you to easily select your favorite stations.

The anti-theft feature will disable the system if it is disconnected from the vehicle's battery. To get the system working again, you must enter a code number (see page 200).
Operating the Radio
The ignition switch must be in ACCESSORY (I) or ON (II) to operate the audio system. Turn the system on by pushing the PWR/VOL knob. Adjust the volume by turning the same knob.

The band and frequency that the radio was last tuned to is displayed. To change bands, press the AM/FM button. On the FM band, ST will be displayed if the station is broadcasting in stereo. Stereo reproduction on AM is not available.

You can use any of five methods to find radio stations on the selected band: TUNE, SEEK, SCAN, AUTO SELECT, and the preset buttons.

**TUNE** — Use the TUNE bar to tune the radio to a desired frequency. Press the ▶ side of the bar to tune to a higher frequency, and the ◀ side to tune to a lower frequency. The frequency numbers will start to change rapidly. Release the bar when the display reaches the desired frequency. To change the frequency in small increments, press and release the TUNE bar quickly.

**SEEK** — The SEEK function searches the band for a station with a strong signal. To activate it, press the SEEK bar on either the ◀ or ▶ side, then release it. Depending on which side you press, the system scans upward or downward from the current frequency. It stops when it finds a station with a strong signal.
SCAN — The SCAN function samples all the stations with strong signals on the selected band. To activate it, press the SCAN button, then release it. You will see SCAN in the display. The system will scan up the band for a station with a strong signal. When it finds one, it will stop and play that station for approximately five seconds. If you do nothing, the system will then scan for the next strong station and play that for five seconds. When it plays a station that you want to continue listening to, press the SCAN button again.

Preset — You can store the frequencies of your favorite radio stations in the six preset buttons. Each button will store one frequency on the AM band, and two frequencies on the FM band.
To store a frequency:

1. Select the desired band, AM or FM. FM1 and FM2 let you store two frequencies with each preset button.

2. Use the TUNE, SEEK, or SCAN function to tune the radio to a desired station.

3. Pick the Preset button you want for that station. Press the button and hold it until you hear a beep.

4. Repeat steps 1 to 3 to store a total of six stations on AM and twelve on FM.

Once a station’s frequency is stored, simply press and release the proper Preset button to tune to it. The preset frequencies will be lost if your vehicle’s battery goes dead, is disconnected, or the radio fuse is removed.
AUTO SELECT — If you are traveling far from home and can no longer receive the stations you preset, you can use the Auto Select feature to find stations in the local area.

To activate Auto Select, press the A. SEL button. A. SEL will flash in the display, and the system will go into scan mode for several seconds. It automatically scans both bands, looking for stations with strong signals. It stores the frequencies of six AM stations and twelve FM stations in the preset buttons. You can then use the preset buttons to select those stations.

If you are in a remote area, Auto Select may not find six strong AM stations or twelve strong FM stations. If this happens, you will see a “0” displayed when you press any preset button that does not have a station stored.

If you do not like the stations Auto Select has stored, you can store other frequencies in the preset buttons. Use the TUNE, SEEK, or SCAN function to find the desired frequencies, then store them in the selected preset buttons as described previously.

Auto Select does not erase the frequencies that you preset previously. When you return home, turn off Auto Select by pressing the A. SEL button. The preset buttons will then select the frequencies you originally set.
Adjusting the Sound

Balance/Fader — These two controls adjust the strength of the sound coming from each speaker. The Balance control adjusts the side-to-side strength, while the Fader control adjusts the front-to-back strength.

To adjust the fader, push on the BASS/FADER control knob to get it to pop out. Pull it out slightly farther, and adjust the front-to-back sound to your liking. Push the knob back in when you are done so you cannot change the setting by accidentally bumping it.

To adjust the balance, push on the TREBLE/BALANCE control knob to get it to pop out. Pull it out slightly farther, and adjust the side-to-side sound to your liking. Push the knob back in when you are done so you cannot change the setting by accidentally bumping it.

Treble/Bass — Use these controls to adjust the tone to your liking.

To adjust the Treble level, push on the TREBLE/BALANCE control knob to get it to pop out. Without pulling it out farther, turn the knob to adjust the treble level. Push the knob back in when you are done so you cannot change the setting by accidentally bumping it.

To adjust the Bass level, push on the BASS/FADER control knob to get it to pop out. Without pulling it out farther, turn the knob to adjust the bass level. Push the knob back in when you are done so you cannot change the setting by accidentally bumping it.
Audio System Lighting
You can use the instrument panel brightness control knob to adjust the illumination of the audio system (see page 83). The audio system illuminates when the parking lights are on, even if the radio is turned off.

Radio Frequencies
Your Honda’s radio can receive the complete AM and FM bands. Those bands cover these frequencies:

AM band:
530 to 1,710 kilohertz
FM band:
87.7 to 107.9 megahertz

Radio stations on the AM band are assigned frequencies at least ten kilohertz apart (530, 540, 550). Stations on the FM band are assigned frequencies at least 0.2 megahertz apart (87.9, 88.1, 88.3).

Radio Reception
How well your Honda's radio receives stations is dependent on many factors, such as the distance from the station's transmitter, nearby large objects, and atmospheric conditions.

A radio station's signal gets weaker as you get farther away from its transmitter. If you are listening to an AM station, you will notice the sound volume becoming weaker, and the station drifting in and out. If you are listening to an FM station, you will see the stereo indicator flickering off and on as the signal weakens. Eventually, the stereo indicator will go off and the sound will fade completely as you get out of range of the station’s signal.

Driving very near the transmitter of a station that is broadcasting on a frequency close to the frequency of the station you are listening to can also affect your radio’s reception. You may temporarily hear both stations, or hear only the station you are close to.

CONTINUED
Radio signals, especially on the FM band, are deflected by large objects such as buildings and hills. Your radio then receives both the direct signal from the station’s transmitter, and the deflected signal. This causes the sound to distort or flutter. This is a main cause of poor radio reception in city driving.

Radio reception can be affected by atmospheric conditions such as thunderstorms, high humidity, and even sunspots. You may be able to receive a distant radio station one day and not receive it the next day because of a change in conditions.

Electrical interference from passing vehicles and stationary sources can cause temporary reception problems.

As required by the FCC: Changes or modifications not expressly approved by the party responsible for compliance could void the user’s authority to operate the equipment.
You operate the CD player with the same controls used for the radio.

With the ignition switch in ACCESSORY (I) or ON (II), insert the disc into the CD slot. Push the disc in halfway, the drive will pull it in the rest of the way and begin to play. The number of the track that is playing is shown in the display.

You can also play 3-inch (8-cm) discs without using an adapter ring. In all cases, play only standard round discs. Odd-shaped CDs may jam in the drive or cause other problems.

For best results when using CD-R discs, use only high quality discs labeled for audio use. When recording a CD-R, the recording must be closed in order for the disc to be used by CD players. CD-RW discs will not work in this unit.
Audio System

When the system reaches the end of the disc, it will return to the beginning and play the disc again.

You can use the TUNE and SEEK/SKIP bars while a disc is playing to select passages and change tracks.

To move rapidly within a track, press and hold the TUNE bar. Press the ► side to move forward. You will see CUE in the display. Press the ◄ side to move backward. You will see REW displayed. Release the bar when the system reaches the point you want.

Each time you press and release the ► side of the SEEK/SKIP bar, the system skips forward to the beginning of the next track. Press the ◄ side to skip backward to the beginning of the current track. Press it again to skip to the beginning of the previous track.

To activate the Repeat feature, press and release the RPT button. You will see RPT in the display. The system continuously replays the current track. Press the RPT button again to turn it off.

REPEAT — To activate the Repeat feature, press and release the RPT button. You will see RPT in the display. The system continuously replays the current track. Press the RPT button again to turn it off.

RANDOM PLAY — This feature, when activated, plays the tracks on the CD in random order, rather than in the order they are recorded on the CD. To activate Random Play, press and release the A. SEL/RDM button. You will see RDM in the display. The system will then select and play tracks randomly. This continues until you deactivate Random Play by pressing A. SEL/RDM again.

If the system is in Repeat mode, you must turn it off by pressing the RPT button before selecting Random Play.

You can switch to the radio while a CD is playing by pressing the AM/FM button. Press the CD button to return to playing the CD. The CD will begin playing where it left off.

If you turn the system off while a CD is playing, either with the PWR/VOL knob or by turning off the ignition, the disc will stay in the drive. When you turn the system back on, the CD will begin playing where it left off.

Press the eject button to remove the disc from the drive.

If you eject the disc, but do not remove it from the slot, the system will automatically reload the disc after 15 seconds and put the CD player in pause mode. To begin playing the disc, press the CD button.
Operating the CD Changer (Optional)
A Compact Disc changer is available for your vehicle. It holds up to six discs, providing several hours of continuous entertainment. You operate this CD changer with the same controls used for the in-dash CD player.

Load the desired CDs in the magazine and load the magazine in the changer according to the instructions that came with the unit. Play only standard round discs. Odd-shaped CDs may jam in the drive or cause other problems.

For best results when using CD-R discs, use only high quality discs labeled for audio use. When recording a CD-R, the recording must be closed in order for the disc to be used by CD players. CD-RW discs will not work in this unit.

To select the CD changer, press the CD button. The disc and track numbers will be displayed.

To select a different disc, press the appropriate preset button (1–6). If you select an empty slot in the magazine, the changer will, after finding that slot empty, try to load the CD in the next slot. This continues until it finds a CD to load and play.

If you load a CD in the in-dash player while the changer is playing a CD, the system will stop the changer and begin playing the in-dash CD. To select the changer again, press the CD button. Play will begin where it left off. Use the CD button to switch between the player and the changer.

If you eject the disc in the in-dash CD while it is playing, the system will automatically switch to the CD changer and begin play where it left off. If there are no CDs in the changer, the display will flash. You will have to select another mode (AM or FM) with the button.

When you switch back to CD mode, the system selects the same unit (in-dash or changer) that was playing when you switched out of CD mode.

To use the SKIP, REPEAT, and RANDOM functions, refer to the in-dash player operating instructions.
Protecting Compact Discs

Handle a CD by its edges; never touch either surface. Do not place stabilizer rings or labels on the CD. These and contamination from fingerprints, liquids, and felt-tip pens can cause the CD to not play properly, or possibly jam in the drive.

When a CD is not being played, store it in its case to protect it from dust and other contamination. To prevent warpage, keep CDs out of direct sunlight and extreme heat.

To clean a disc, use a clean soft cloth. Wipe across the disc from the center to the outside edge.

A new CD may be rough on the inner and outer edges. The small plastic pieces causing this roughness can flake off and fall on the recording surface of the disc, causing skipping or other problems. Remove these pieces by rubbing the inner and outer edges with the side of a pencil or pen.

Never try to insert foreign objects in the CD player or the magazine.
**CD Player Error Indications**

If you see an error indication in the display while operating the CD player, find the cause in the chart to the right. If you cannot clear the error indication, take the vehicle to your Honda dealer.

<table>
<thead>
<tr>

</tbody>
</table>
The cassette system features Dolby® noise reduction, automatic sensing of chromium-dioxide (CrO₂) tape, and autoreverse for continuous play.

Make sure the tape opening on the cassette is facing to the right, then insert the cassette most of the way into the slot. The system will pull it in the rest of the way, and begin to play.

*Dolby noise reduction manufactured under license from Dolby Laboratories Licensing Corporation. “DOLBY” and the double-D symbol are trademarks of Dolby Laboratories Licensing Corporation.
The tape direction indicator will light to show you which side of the cassette is playing. The ▲ indicates the side you inserted facing upward is now playing. If you want to play the other side, press the PROG button.

Dolby noise reduction turns on when you insert a cassette. If the tape was not recorded with Dolby noise reduction, turn it off by pressing the NR button.

Noise reduction remains off until you turn it on by pressing the button again.

When the system reaches the end of the tape, it will automatically reverse direction and play the other side. If you want to remove the cassette from the drive, press the EJECT button on the cassette player.

If you turn the system off while a tape is playing, either with the PWR/VOL knob or by turning off the ignition, the cassette will remain in the drive. When you turn the system back on, the cassette player will be in pause mode. To begin playing, press the PLAY button.

To switch to the radio or CD player while a tape is playing, press the AM/FM, or CD button. To change back to the cassette player, push the CD button.

Fast Forward and Rewind move the tape rapidly. Press and release the side of the TUNE bar to fast forward the tape, or the side to rewind. You will see FF or REW flashing in the display. To stop fast forward or rewind, press either side of the TUNE bar or the PLAY button. If the system reaches the end of the tape while in fast forward or rewind, it automatically stops that function, reverses direction, and begins to play.

**Tape Search Functions**

With a cassette playing, you can use the FF, REW, SKIP, or REPEAT function to find a desired program.

**FF/REW** — Fast Forward and Rewind move the tape rapidly. Press and release the ▶ and release the ← side of the TUNE bar to fast forward the tape, or the ← side to rewind. You will see FF or REW flashing in the display. To stop fast forward or rewind, press either side of the TUNE bar or the PLAY button. If the system reaches the end of the tape while in fast forward or rewind, it automatically stops that function, reverses direction, and begins to play.
**SKIP** — The Skip function allows you to find the beginning of a song or passage. To activate SKIP, press the SEEK/SKIP bar. Press the ► ► side to advance to the beginning of the next song or passage, or the ▼ ▼ side to return to the beginning of the current song or passage. FF or REW will flash in the display as the tape moves. When the system reaches the beginning of the next song or passage (FF), or the beginning of the current one (REW), it goes back to PLAY mode.

**REPEAT** — The Repeat function continuously replays the current song or passage. Press the RPT button to activate it; you will see RPT displayed as a reminder. When the system reaches the end of the song or passage currently playing, it will automatically go into rewind. When it senses the beginning of the same song or passage, the system returns to PLAY mode. It will continue to repeat this same program until you deactivate REPEAT by pressing the button again.

The SKIP and REPEAT functions use silent periods on the tape to find the end of a song or passage. These features may not work to your satisfaction if there is almost no gap between selections, a high noise level between selections, or a silent period in the middle of a selection.
Caring for the Cassette Player
The cassette player picks up dirt and oxides from the tape. This contamination builds up over time and causes the sound quality to degrade. To prevent this, you should clean the player after every 30 hours of use. Your dealer has a cleaning kit available.

If you do not clean the cassette player regularly, it may eventually become impossible to remove the contamination with a normal cleaning kit.

Use 100-minute or shorter cassettes. Cassettes longer than that use thinner tape that may break or jam the drive.

Look at the cassette before you insert it. If the tape is loose, tighten it by turning a hub with a pencil or your finger.

If the label is peeling off, remove it from the cassette or it could cause the cassette to jam in the player. Never try to insert a warped or damaged cassette in the player.

When they are not in use, store cassettes in their cases to protect them from dust and moisture. Never place cassettes where they will be exposed to direct sunlight, high heat, or high humidity. If a cassette is exposed to extreme heat or cold, let it reach a moderate temperature before inserting it in the player.

Never try to insert foreign objects into the cassette player.

If you see the error indication “\textit{TAPE E\textit{Err}}” (LX model)/“\textit{TAPE E\textit{Err}}” (EX and EX-L models)/“\textit{E\textit{Err}}” (optional on EX-L model) on the display, press the EJECT button and remove the cassette from the unit. Make sure the tape is not damaged. If the cassette will not eject or the error indication stays on after the cassette ejects, take the vehicle to your Honda dealer.

On LX model
If a problem develops in the connection between the cassette player and the radio, you will see “\textit{ERR}” in the display. Take the vehicle to your Honda dealer.
Remote Audio Controls

Two controls for the audio system are mounted in the steering wheel hub. These let you control basic functions without removing your hand from the wheel.

On EX and EX-L models

The top and bottom buttons adjust the volume up (▲) or down (▼). Press the proper button and hold it until the desired volume is reached, then release it.

The AUDIO/CH button has three functions, depending on whether you are listening to the radio, or playing a cassette or CD.

If you are playing a cassette, use the AUDIO/CH button to advance to the next selection. You will see “FF” blinking in the display when you press the AUDIO/CH button. The system fast forwards until it senses a silent period, then goes back to PLAY.

If you are playing a CD, the system skips to the beginning of the next track each time you push the AUDIO/CH button. You will see the disc and track number in the display.

If you are listening to the radio, use the AUDIO/CH button to change stations. Each time you press this button, the system advances to the next preset station on the band you are listening to. You will see the number of the selected Preset button in the display. To change bands, press the AM/FM button on the audio system’s front panel.
Theft Protection

On EX and EX-L models
Your vehicle’s audio system will disable itself if it is disconnected from electrical power for any reason. To make it work again, the user must enter a specific five-digit code in the Preset buttons. Because there are hundreds of number combinations possible from five digits, making the system work without knowing the exact code is nearly impossible.

You should have received a card that lists your audio system's code number and serial number. It is best to store this card in a safe place at home. In addition, you should write the audio system's serial number in this Owner's Manual. If you should happen to lose the card, you must obtain the code number from your Honda dealer. To do this, you will need the system's serial number.

If your vehicle’s battery is disconnected or goes dead, or the radio fuse is removed, the audio system will disable itself. If this happens, you will see “C00E” in the frequency display the next time you turn on the system. Use the Preset buttons to enter the five-digit code. If it is entered correctly, the radio will start playing.

If you make a mistake entering the code, do not start over or try to correct your mistake. Complete the five-digit sequence, then enter the correct code. You have ten tries to enter the correct code. If you are unsuccessful in ten attempts, you must then leave the system on for one hour before trying again.

You will have to store your favorite stations in the Preset buttons after the system begins working. Your original settings were lost when power was disconnected.
AM/FM/Cassette/CD/DVD Audio system
Optional on U.S. EX-L model
Your Honda’s audio system provides clear reception on both AM and FM bands, while the preset buttons allow you to easily select your favorite stations.

The cassette system features Dolby\textsuperscript{*} noise reduction, automatic sensing of chromium-dioxide (CrO\textsubscript{2}) tape, and autoreverse for continuous play.

The anti-theft feature will disable the system if it is disconnected from the vehicle’s battery. To get the system working again, you must enter a code number (see page 200).

\textsuperscript{*} Dolby noise reduction manufactured under license from Dolby Laboratories Licensing Corporation. “DOLBY” and the double-D symbol are trademarks of Dolby Laboratories Licensing Corporation.
This system also has a rear entertainment system that allows the rear passengers to listen through wireless headphones to different programming than the front seat occupants. A built-in DVD player allows the rear passengers to watch DVDs or video CDs. To operate this part of the system, refer to Rear Entertainment System on page 217.

The front control panel has two displays. The left display shows the information for the front part of the system.

When the rear system is on, the right display shows the information for the rear part of the system.
Operating the Radio
The ignition switch must be in ACCESSORY (I) or ON (II) to operate the audio system. Turn the system on by pushing the PWR/VOL knob. Adjust the volume by turning the same knob.

The band and frequency that the radio was last tuned to is displayed. To change bands, press the AM/FM button. On the FM band, ST will be displayed if the station is broadcasting in stereo. Stereo reproduction on AM is not available.
Audio System

You can use any of five methods to find radio stations on the selected band: TUNE, SEEK, SCAN, AUTO SELECT, and the preset buttons.

**TUNE** — Use the TUNE knob to tune the radio to a desired frequency. Turn the TUNE knob to the right to tune to a higher frequency, or to the left to tune to a lower frequency. Turn the knob right or left until the display reaches the desired frequency.

**SEEK** — The SEEK function searches the band for a station with a strong signal. To activate it, press the SEEK bar ← or →, then release it. Depending on which part of the SEEK bar you press, the system scans upward or downward from the current frequency. It stops when it finds a station with a strong signal.

**SCAN** — The SCAN function samples all the stations with strong signals on the selected band. To activate it, press the SCAN button, then release it. You will see SCAN in the display. The system will scan up the band for a station with a strong signal. When it finds one, it will stop and play that station for approximately five seconds. If you do nothing, the system will then scan for the next strong station and play that for five seconds. When it plays a station that you want to continue listening to, press the SCAN button again.

**Preset** — You can store the frequencies of your favorite radio stations in the six preset buttons. Each button will store one frequency on the AM band, and two frequencies on the FM band.

To store a frequency:
1. Select the desired band, AM or FM. FM1 and FM2 let you store two frequencies with each preset button.
2. Use the TUNE, SEEK, or SCAN function to tune the radio to a desired station.
3. Pick the Preset button you want for that station. Press the button and hold it until you hear a beep.
4. Repeat steps 1 to 3 to store a total of six stations on AM and twelve on FM.

Once a station's frequency is stored, simply press and release the proper Preset button to tune to it. The preset frequencies will be lost if your vehicle’s battery goes dead, is disconnected, or the radio fuse is removed.
**AUTO SELECT** — If you are traveling far from home and can no longer receive the stations you preset, you can use the Auto Select feature to find stations in the local area.

To activate Auto Select, press the A. SEL button. A. SEL will flash in the display, and the system will go into scan mode for several seconds. It automatically scans both bands, looking for stations with strong signals. It stores the frequencies of six AM stations and twelve FM stations in the preset buttons. You can then use the preset buttons to select those stations.

If you are in a remote area, Auto Select may not find six strong AM stations or twelve strong FM stations. If this happens, you will see a “0” displayed when you press any preset button that does not have a station stored.
If you do not like the stations Auto Select has stored, you can store other frequencies in the preset buttons. Use the TUNE, SEEK, or SCAN function to find the desired frequencies, then store them in the selected preset buttons as described previously.

Auto Select does not erase the frequencies that you preset previously. When you return home, turn off Auto Select by pressing the A. SEL button. The preset buttons will then select the frequencies you originally set.
**Adjusting the Sound**

Bass, Treble, Balance, and Fader are each adjustable. You select which of these you want to adjust by pressing the TUNE knob. The mode changes from BAS to TRE to FAD to BAL, and then back to the selected audio mode, each time you press the TUNE knob.

**Treble/Bass** — Use these modes to adjust the tone to your liking. Select TRE or BAS by pressing the TUNE knob. Adjust the selected mode by turning the TUNE knob. The displayed number shows you the current setting. When the adjustment level reaches the center, you will see "0".

**Balance/Fader** — These two modes adjust the strength of the sound coming from each speaker. BAL adjusts the side-to-side strength, while FAD adjusts the front-to-back strength.
Select BAL or FAD by pressing the TUNE knob. Adjust the Balance or Fader to your liking by turning the TUNE knob. The displayed number shows you the current setting. When the adjustment level reaches the center, you will see “.”

The system will automatically return the display to the selected audio mode about five seconds after you stop adjusting a mode with the MODE knob.

**Audio System Lighting**

You can use the instrument panel brightness control knob to adjust the illumination of the audio system (see page 83). The audio system illuminates when the parking lights are on, even if the radio is turned off.

**Radio Frequencies and Reception**

For information, see page 187.
Operating the Cassette Player

The ignition switch must be in ACCESSORY (I) or ON (II). Make sure the tape opening on the cassette is facing to the right, then insert the cassette most of the way into the slot. The system will pull it in the rest of the way, and begin to play.

The tape direction indicator will light to show you which side of the cassette is playing. The ▲ indicates the side you inserted facing upward is now playing. If you want to play the other side, press the PROG (▲) button.

Dolby noise reduction turns on when you insert a cassette. The Dolby indicator will light in the display. If the tape was not recorded with Dolby noise reduction, turn it off by pressing the Dolby button.

CONTINUED
Noise reduction remains off until you turn it on by pressing the button again.

When the system reaches the end of the tape, it will automatically reverse direction and play the other side. If you want to remove the cassette from the drive, press the EJECT button.

You can remove the cassette with the ignition switch in any position, even if the audio system is turned off.

If you turn the system off while a tape is playing, either with the PWR/VOL knob or by turning off the ignition, the cassette will remain in the drive. When you turn the system back on, the tape will begin playing where it left off.

To switch to the radio, CD player, or CD changer, press the AM/FM or CD/CHG button. To change back to the cassette player, press the TAPE button.
### Tape Search Functions
With a cassette playing, you can use the FF, REW, SKIP, or REPEAT function to find a desired program.

**FF/REW** — Fast Forward and Rewind move the tape rapidly. To rewind the tape, push the Rewind button. You will see REW in the display. To fast forward the tape, push the Fast Forward button. You will see FF displayed. Press the Rewind or PLAY/PROG button to take the system out of rewind or fast forward. When the system reaches the end of the tape, it reverses direction and begins to play.

**SKIP** — The Skip function allows you to find the beginning of a song or passage. To skip to the beginning of a song or passage currently playing, push the Rewind button. You will see REW flashing in the display as the tape rewinds. To skip to the beginning of the next song, push the + side of the SKIP bar. You will see FF flashing in the display as the tape fast forwards. When the system finds the beginning of a song or passage, it goes back to PLAY.

To stop the SKIP function before it finds the beginning of a song or passage, press either side of the SKIP bar (− or +).

**REPEAT** — The Repeat function continuously replays the current song or passage. Press the RPT button to activate it; you will see RPT displayed as a reminder. When the system reaches the end of the song or passage currently playing, it will automatically go into rewind. When it senses the beginning of the same song or passage, the system returns to PLAY mode. It will continue to repeat this same program until you deactivate REPEAT by pressing the button again.

Pressing the Rewind or Fast Forward button, or either side of the SKIP bar, also turns off REPEAT.

The SKIP and REPEAT functions use silent periods on the tape to find the end of a song or passage. These features may not work to your satisfaction if there is almost no gap between selections, a high noise level between selections, or a silent period in the middle of a selection.

**Caring for the Cassette Player**
Damaged cassettes can jam inside the drive or cause other problems. See page 198 for information on cassette care and protection.
Operating the CD Player
You operate the CD player with the same controls used for the radio.

With the ignition switch in ACCESSORY (I) or ON (II), insert the disc into the CD slot. Push the disc in halfway, the drive will pull it in the rest of the way and begin to play. The number of the track that is playing is shown in the display.

You can also play 3-inch (8-cm) discs without using an adapter ring. Play only standard round discs. Odd-shaped CDs may jam in the drive or cause other problems.

For best results when using CD-R discs, use only high quality discs labeled for audio use. When recording a CD-R, the recording must be closed in order for the disc to be used by CD players. CD-RW discs will not work in this unit.
When the system reaches the end of the disc, it will return to the beginning and play the disc again.

You can switch to the radio while a CD is playing by pressing the AM/FM button. Press the CD button to return to playing the CD. The CD will begin playing where it left off.

If you turn the system off while a CD is playing, either with the PWR/VOL knob or by turning off the ignition, the disc will stay in the drive. When you turn the system back on, the CD will begin playing where it left off.

Press the eject button to remove the disc from the drive.

If you eject the disc, but do not remove it from the slot, the system will automatically reload the disc after 15 seconds and put the CD player in pause mode. To begin playing the disc, press the CD button.

You can use the SEEK/SKIP bar while a disc is playing to select passages and change tracks.

To move rapidly within a track, press and hold the SEEK/SKIP bar. Press the + side to move forward. You will see CUE in the display. Press the – side to move backward. You will see REW displayed. Release the bar when the system reaches the point you want.

Each time you press and release the + side of the SEEK/SKIP bar, the system skips forward to the beginning of the next track. Press and release the – side to skip backward to the beginning of the current track. Press it again to skip to the beginning of the previous track.

**REPEAT** — To activate the Repeat feature, press and release the RPT button. You will see RPT in the display. The system continuously replays the current track. Press the RPT button again to turn it off.

**RANDOM PLAY** — This feature, when activated, plays the tracks on the CD in random order, rather than in the order they are recorded on the CD. To activate Random Play, press and release the A. SEL/RDM button. You will see RDM in the display. The system will then select and play tracks randomly. This continues until you deactivate Random Play by pressing A. SEL/RDM again.
Operating the CD Changer (Optional)
A Compact Disc changer is available for your vehicle. It holds up to six discs, providing several hours of continuous entertainment. You operate this CD changer with the same controls used for the in-dash CD player.

Load the desired CDs in the magazine and load the magazine in the changer according to the instructions that came with the unit. Play only standard round discs. Odd-shaped CDs may jam in the drive or cause other problems.

For best results when using CD-R discs, use only high quality discs labeled for audio use. When recording a CD-R, the recording must be closed in order for the disc to be used by CD players. CD-RW discs will not work in this unit.

To select the CD changer, press the CD button. The disc and track numbers will be displayed.

To select a different disc, use the Preset 5 (DISC −) or Preset 6 (DISC +) button. Press the Preset 6 button to select the next disc in the magazine. Press the Preset 5 button to select the previous disc. If you select an empty slot in the magazine, the changer will, after finding that slot empty, try to load the CD in the next slot. This continues until it finds a CD to load and play.

If you load a CD in the in-dash player while the changer is playing a CD, the system will stop the changer and begin playing the in-dash CD. To select the changer again, press the CD button. Play will begin where it left off. Use the CD button to switch between the player and the changer.

If you eject the in-dash CD while it is playing, the system will automatically switch to the CD changer and begin play where it left off. If there are no CDs in the changer, the display will flash. You will have to select another mode (Radio or Cassette Player).

When you switch back to CD mode, the system selects the same unit (in-dash or changer) that was playing when you switched out of CD mode.

To use the SKIP, REPEAT, and RANDOM functions, refer to the in-dash player operating instructions.

Protecting Compact Discs
For information on how to handle and protect compact discs, see page 192.
**CD Player Error Indications**

If you see an error indication in the display while operating the CD player, find the cause in the chart to the right. If you cannot clear the error indication, take the vehicle to your Honda dealer.

Optional on EX-L model
Your Honda is equipped with a Rear Entertainment System that includes a DVD player for the enjoyment of the rear passengers. With this system, the rear passengers can enjoy a different entertainment source (radio, cassette player, CD player or DVD player) than the front seat occupants.

The ignition switch must be in ACCESSORY (I) or ON (II) to operate the Rear Entertainment System.

Turn on the rear system by pressing the REAR PWR button. The rear entertainment system can then be operated from the front control panel, the rear control panel on the ceiling, or with the remote control. The right display then shows the information for the rear system.
When the rear system is turned on, it selects the entertainment source it was last set to. If that source has been removed (the DVD has been ejected from the player, for example), you will see “_ _ _” in the display. You must select another source.

When you turn on the rear system, the rear speakers are automatically turned off. You will see the Rear Speakers Off icon in the right display. The sound for the rear system is sent to the wireless headphones. If you want to turn the rear speakers on again, press and hold the REAR PWR button until they come on.

NOTE: The rear speakers are connected to the front system, so they will always play the source that the front system is set to. For example, if you are listening to the radio, and your rear passengers are listening to a CD through the headphones, the rear speakers will play the radio when you turn them on. To have the vehicle speakers play the CD, change the front source from AM/FM to CD.

Pressing the RR CTRL selector knob turns off the rear controls. Your passengers are not able to operate the rear system with the control panel in the ceiling or with the remote control. You will see the Rear Controls Off icon in the right display. Press the selector knob again to turn the rear controls back on.
Rear Video Operation
The DVD player in your Rear Entertainment System can play DVD video discs and CDs. It features Dolby* noise reduction. The video screen is designed for use by the rear seat passengers only. The driver and front seat passenger should not try to view the screen while driving.

* Dolby noise reduction manufactured under license from Dolby Laboratories Licensing Corporation. “DOLBY” and the double-D symbol are trademarks of Dolby Laboratories Licensing Corporation.

Open the overhead screen by pushing on the button. The screen will swing down part-way. Pivot the screen the rest of the way. If you pivot the screen too far forward, past the detent, the display will turn off. Pivot the screen back to the detent to turn the display back on. To close the screen, pivot it up until it latches.

The DVD player is located under the front control panel. Insert the disc into the DVD slot. Push the disc in halfway, the drive will pull it in the rest of the way. Press the eject button to remove the disc from the drive.

Follow the instructions on the following pages to operate the DVD player from the front control panel, the rear control panel, or with the remote control.
Operating the DVD Player from the Front Control Panel
To operate the rear entertainment system from the front panel, you must first turn the RR CTRL knob clockwise to enable the panel. The amber RR LED will come on to show that the control panel is now enabled.

To return front panel control to the front audio system, turn the knob counterclockwise. The system will automatically change back to the front system several seconds after you stop pressing the buttons.
Some DVDs start playing automatically after the disc is loaded completely. If a disc does not start playing, press the PLAY button. If the system is in PAUSE mode, press the PLAY button to cancel the PAUSE mode.

Press the PAUSE button to pause the disc. Press the button again or press the PLAY button to return to PLAY. PAUSE works only with DVDs.

You can move rapidly within a track or a chapter by pressing the SEEK/SKIP bar. Press and hold the + side to move forward, You will see “CUE” in the display. Press and hold the − side to move backward, You will see “REV” in the display. Release the bar when the system reaches the point you want.

Each time you press and release the + side of the SEEK/SKIP bar, the system skips forward to the beginning of the next track or chapter. Press and release the − side of the bar to skip backward to the beginning of the current track or chapter. If you press the − side of the bar while the beginning of a track or chapter is playing, the system skips to the beginning of the previous track or chapter.

Press the RPT button to continuously replay the current track. You will see RPT in the display. Press the button again to turn it off. RPT works only with CDs.

To play the tracks within a CD in random order, press the RDM button. You will see RDM in the display. Press the button again to cancel RDM. RDM works only with CDs.
Operating the DVD Player from the Rear Control Panel
You can control some DVD functions from the rear control panel in the ceiling. Make sure the rear control operation has not been disabled with the RR CTRL knob on the front panel.

Source Selection Buttons
Use these buttons to select the entertainment source (radio, cassette player, CD player/CD changer, or DVD player/Auxiliary device). The selected source will be shown in the display.

PLAY/PAUSE/PROG Button
Press this button when you want to pause a DVD. Press this button again to go back to Play.

SEEK/SKIP Buttons
Press the ▶ button to skip to the beginning of the next chapter. Press the ◄ button to skip back to the beginning of the current chapter.

If you press the ◄ button while the beginning of a chapter is playing, the system skips to the beginning of the previous chapter.

MENU/ENT Buttons
To select the menu on the DVD, press the MENU button. Use the ◄, ►, ▲, and ◄ buttons to move to the desired menu selection, then press the ENT button to enter your selection.
Operating the DVD Player with the Remote Control
You can control all of the DVD functions with the remote control. Make sure the rear control operation has not been disabled with the RR CTRL knob on the front panel.

When using the remote control, point it at the rear control panel in the ceiling.

Source Selection Buttons
Use these buttons to select the entertainment source (radio, cassette player, CD player/CD changer, or DVD player/Auxiliary device). The selected source will be shown in the display.

PLAY/PROG Button
Press this button to start playing a DVD.
**PAUSE Button**
Press this button when you want to pause a DVD. Press this button again to go back to Play.

**STOP Button**
Press this button to stop playing a DVD.

**SKIP Buttons**
Press the ▶ button to skip to the beginning of the next chapter. Press the ◀ button to skip back to the beginning of the current chapter.

**FWD/REW Buttons**
Press the ▶ button to move forward rapidly within a chapter. You will see CUE in the display. Press the ◀ button to move backward rapidly within a chapter. You will see REV in the display. Release the button when the system reaches the point you want.

**MENU Button**
Some DVDs have menus that allow you to select a dubbed language, subtitles, a chapter list, previews, etc. The menu contents will vary from DVD to DVD.

Press the MENU button to display the DVD's main menu. Use the <, >, ^, and v buttons to select the desired menu option. Then press ENT to enter your selection.

If the menu has more than one page, use the ▶ and ◀ buttons to change pages.

You can also use the numbered buttons to enter the number of a menu option. You do not have to press ENT, the option will be selected when you complete the number. Make sure you enter two digits. If the option number is less than 10, enter a “0” first.

**TITLE Button**
Some DVDs have a title menu. The contents of the menu vary from DVD to DVD.

Press the TITLE button to display the title menu window. Move your selection by pressing the <, >, ^, and v buttons. Enter your selection by pressing the ENT button. If the menu has more than one page, use the ▶ and ◀ buttons to change pages. Press the TITLE button again to close the window.

**SUBTITLE Button**
Many DVDs are recorded with subtitles, sometimes in multiple languages. To select subtitles, press the SUBTITLE button. Continue to press and release the SUBTITLE button to scan through the available languages.
Many DVDs are recorded, or dubbed, in more than one language. To select a different language than the one being heard, press the AUDIO button. Continue to press and release the AUDIO button to hear all the available languages.

To change the color, contrast, aspect ratio, and brightness of the video screen, press the DISP button. The current setting of one will be displayed on the screen each time you press the button. Use the < and > buttons to change the setting as desired. The display will disappear from the screen several seconds after you stop adjusting the setting.

On some DVDs, the scenes are recorded by more than one camera, giving different viewpoints of the same scene. By pressing the Angle button, you can select a different viewpoint.

In the MENU selection mode, pressing the RETURN button for less than two seconds changes the MENU display to the previous page. Pressing the RETURN button for more than two seconds while a DVD is playing brings the system into the TITLE enter mode. When you enter your selection, the DVD player will start playing from the selected title.
## Rear Entertainment System

### Playable DVDs

<table>
<thead>
<tr>
<th>DVD</th>
<th>Compact Disc</th>
</tr>
</thead>
</table>

There are various types of DVDs available. Some of them are not compatible with your system.

The DVD player in your Rear Entertainment System can play DVD video discs and CDs bearing the above marks on their packages or jackets.

### Protecting DVDs

The tips on how to handle and protect DVDs are basically the same as those for compact discs. Refer to “Protecting Compact Discs” on page 192.

Those packages or jackets should also bear the area designation of “1” or “ALL”.

DVD-ROMs cannot be played in this system.
**DVD Player Error Indications**

If you see an error indication in the display while operating the DVD player, find the cause in the chart to the right. If you cannot clear the error indication, take the vehicle to your Honda dealer.

Playing a CD With the Rear Entertainment System
An audio CD can be played in either the main CD player in the front panel, in the DVD/CD player below the front panel, or in the optional CD changer. This allows the front and rear passengers to listen to different CDs.

Playing a CD With the Front Panel
Select the rear system by turning the RR CTRL knob clockwise. If the CD is loaded in the main CD player, or CD changer, select CD/CHG. If the CD is loaded in the lower player, select DVD/AUX.

If the CD is loaded in the main CD player or CD changer, refer to pages 212 and 214 for operating instructions. If the CD is loaded in the DVD/AUX player, refer to page 220.

Playing a CD With the Rear Control Panel
If the CD is loaded in the main CD player or optional CD changer, select it by pressing the CD/CHG button. If it is loaded in the lower player, press DVD/AUX.

Press the ▶ button to skip to the beginning of the next track. Press the ◄ button to return to the beginning of current track. Press it again to go to the beginning of the previous track.

If the CD changer is selected, use the ▲ and ▼ buttons to change discs.

Playing a CD With the Remote Control
If the CD is loaded in the main CD player or optional CD changer, select it by pressing the CD/CHG button. If it is loaded in the lower player, press DVD/AUX.

To move rapidly within a track, press and hold either the FWD or REW buttons. When you press FWD, you will see “CUE” in the display. When you press REW, you will see “REV” in the display. Release the button when the system reaches the desired point.

Press the ▶▶ button to skip to the beginning of the next track. Press the ◀◀ button to return to the beginning of the current track. Press it again to go to the beginning of the previous track.
Playing the Radio With the Rear Entertainment System
Select the radio with the AM/FM button on the front panel, the rear control panel, or the remote control.

From the front panel, after selecting the rear system with the RR CTRL knob, use the TUNE, SEEK, or SCAN functions or the Preset buttons to select a station.

From the rear control panel in the ceiling, use the ▲ and ▼ buttons to select the stations that are set into the Preset buttons. Pressing the ► or ◄ button will cause the system to search up or down the band for a station with a strong signal. You will see SEEK in the display.

To change Preset stations with the remote control, press the ◄ or ► button. To search for strong stations, press the ◄ or ► button.

Playing a Cassette With the Rear Entertainment System
After loading the cassette, select the cassette player with the TAPE button on the front panel, the rear control panel, or the remote control.

To operate the cassette player from the front panel, refer to page 209. Make sure you have selected the rear system with the RR CTRL knob first.

On the rear control panel, use the PROG/PLAY button to reverse the tape's direction. Use the ► and ◄ buttons to skip. Press the ► button to skip forward to the beginning of the next song or passage. You will see FF flashing in the display. To skip to the beginning of the current song or passage, press the ◄ button. You will see REW flashing in the display.

On the remote control, use the PROG/PLAY button to reverse the tape’s direction. Press the FWD or REW button to fast forward or rewind the tape. Press either of those buttons or the PROG/PLAY button to return to playing the tape. To skip to the beginning of the next song or passage, press the ► button. You will see FF flashing in the display. To skip to the beginning of the current song or passage, press the ◄ button. You will see REW flashing in the display.
Replacing Remote Control Batteries

To replace the batteries in the remote control, put a coin in the notch on the back. Turn it one-quarter, then slide the cover off. Remove the old batteries. Make sure the polarity of new batteries is correct when you install them. Install the cover by sliding it on until it locks. The remote control uses two AA batteries.

As required by the FCC:
This device complies with Part 15 of the FCC rules. Operation is subject to the following two conditions: (1) This device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

Changes or modifications not expressly approved by the party responsible for compliance could void the user’s authority to operate the equipment.

This device complies with Industry Canada Standard RSS-210. Operation is subject to the following two conditions: (1) this device may not cause interference, and (2) this device must accept any interference that may cause undesired operation of the device.
The audio for the rear entertainment system is sent to the wireless headphones that come with the system. To turn on the headphones, press the red button on the earpiece. Adjust the volume level with the dial at the bottom of the same earpiece.

To adjust the comfort of the headphones, slide the earpieces up or down the headband.

For greater battery life, turn off the headphones when they are not in use by pressing the red button again. They will turn off automatically if they do not receive an audio signal from the system for several minutes. When not in use, store the headphones in the pocket on the back of either front seat.

Some state and local government agencies prohibit the use of headphones by the driver of a motor vehicle. Always obey applicable laws and regulations.

When you are not using the remote control, store it in the holder. Place the remote control in the holder with the front end out. Put the holder into the front seat-back pocket and hook it on the edge of the seat-back pocket as shown.

CONTINUED
Replacing Batteries

The batteries are under the domed covers on the back of each earpiece. To remove a cover, put a coin in the notch at the bottom of the earpiece, and turn it one-quarter to pop up the cover. Slide the upper side of the cover backward (away from the headband), then lift it up.

Remove the battery and note its polarity. Install the new battery in the earpiece with the polarity the same. Set the cover in place, then slide it up until it locks. Each headphone uses two AAA batteries.
Auxiliary input jacks and headphone connectors for the rear entertainment system are under the third seat armrest on the driver’s side. To access these connectors, open the cover by pulling up on the lever.

The system will accept auxiliary inputs from standard video games and video equipment. Some video game power supplies may cause poor picture quality.

There are three headphone connectors for the third seat passengers. Each connector has its own volume control.
The security system helps to protect your vehicle and valuables from theft. The horn sounds and a combination of headlights, parking lights, side marker lights and taillights flashes if someone attempts to break into your vehicle or remove the radio. This alarm continues for two minutes, then the alarm stops. To reset an alarming system before the two minutes have elapsed, unlock either front door with the key or the remote transmitter.

The security system sets automatically fifteen seconds after you lock the doors, hood, and tailgate. For the system to activate, you must lock the doors from the outside with the key, the lock tab, the door lock switch, or the remote transmitter. The security system light next to the low oil pressure indicator starts blinking immediately to show you the system is setting itself.

Once the security system is set, opening any door (without using the key or the remote transmitter), or the hood, will cause it to alarm. It also alarms if the radio is removed from the dashboard or the wiring is cut.

With the system set, you can still open the tailgate with the master key or the remote transmitter without triggering the alarm. The alarm will sound if the tailgate lock is forced, or smashed.

The security system will not set if the hood, tailgate, or any door is not fully closed. If the system will not set, check the Door Lamp Monitor on the instrument panel (see page 75), to see if the doors and tailgate are fully closed. Since it is not part of the monitor display, manually check the hood.

Do not attempt to alter this system or add other devices to it.
Cruise control allows you to maintain a set speed above 25 mph (40 km/h) without keeping your foot on the accelerator pedal. It should be used for cruising on straight, open highways. It is not recommended for conditions such as city driving, winding roads, slippery roads, heavy rain, or bad weather. You should have full control of the vehicle under those conditions.

**WARNING**

Improper use of the cruise control can lead to a crash.

Use the cruise control only when traveling on open highways in good weather.

### Using the Cruise Control

1. Push in the Cruise Control Master Switch to the left of the steering column. The indicator in the switch will light.
2. Accelerate to the desired cruising speed above 25 mph (40 km/h).
3. Press and release the SET/decel button on the steering wheel. The CRUISE CONTROL light on the instrument panel comes on to show the system is now activated.
Cruise Control

The cruise control may not hold the set speed when you are going up and down hills. If your speed increases going down a hill, use the brakes to slow down to the desired speed. This will cancel the cruise control. To resume the set speed, press the RESUME/accel button. The CRUISE CONTROL light on the instrument panel comes on.

When climbing a steep hill, the automatic transmission may downshift to hold the set speed.

Changing the Set Speed
You can increase the set cruising speed in any of these ways:

- Press and hold the RESUME/accel button. The vehicle will accelerate. When you reach the desired cruising speed, release the button.
- Push on the accelerator pedal. Accelerate to the desired cruising speed and press the SET/decel button.
- To increase your speed in very small amounts, tap the RESUME/accel button repeatedly. Each time you do this, your vehicle will speed up about 1 mph (1.6 km/h).

You can decrease the set cruising speed in any of these ways:

- Press and hold the SET/decel button. The vehicle will decelerate. Release the button when you reach the desired speed.
- To slow down in very small amounts, tap the SET/decel button repeatedly. Each time you do this, your vehicle will slow down about 1 mph (1.6 km/h).
- Tap the brake pedal lightly with your foot. The CRUISE CONTROL light on the instrument panel will go out. When the vehicle slows to the desired speed, press the SET/decel button. The vehicle will then maintain the desired speed.
Even with the cruise control turned on, you can still use the accelerator pedal to speed up for passing. After completing the pass, take your foot off the accelerator pedal. The vehicle will return to the set cruising speed.

Resting your foot on the brake pedal will cause the cruise control to cancel.

You can cancel the cruise control in any of these ways:

- Tap the brake pedal.
- Push the CANCEL button on the steering wheel.
- Press the Cruise Control Master Switch.

When you push the CANCEL button, or tap the brake pedal, the CRUISE CONTROL light on the instrument panel will go out and the vehicle will begin to slow down. You can use the accelerator pedal in the normal way. The system remembers the previously-set cruising speed. To return to that speed, accelerate to above 25 mph (40 km/h) and then press and release the RESUME/accel button. The CRUISE CONTROL light comes on. The vehicle will accelerate to the same cruising speed as before.

Pressing the Cruise Control Master Switch turns the system completely off and erases the previous cruising speed from memory. To use the system again, refer to Using the Cruise Control.
Always refer to the operating instructions and safety information that came with your garage door opener or other equipment you intend to operate with the HomeLink Universal Transceiver. If you do not have this information, you should contact the manufacturer of the equipment.

While training or using HomeLink, make sure you have a clear view of the garage door or gate, and that no one will be injured by its movement.

If your garage door opener was manufactured before April 1982, you may not be able to program HomeLink to operate it. Garage door openers manufactured before that date do not have a safety feature that causes them to stop and reverse if an obstacle is detected during closing, increasing the risk of injury. If you have questions, call (800) 355-3515.

The HomeLink transmitter stores the code in a permanent memory. There should be no need to retrain the transmitter if your vehicle's battery goes dead or is disconnected.

If you are training HomeLink to operate a garage door or gate, it is recommended that you unplug the motor for that device during training. Repeatedly pressing the remote control button could burn out the motor.

The HomeLink Universal Transceiver built into your vehicle can be programmed to operate remotely-controlled devices around your home, such as garage doors, lighting, or home security systems. It can replace up to three remote transmitters.

Customer Assistance
If you have problems with training the HomeLink Universal Transceiver, or would like information on home products that can be operated by the transmitter, call (800) 355-3515. On the Internet, go to www.homelink.com.

Important Safety Precautions
Always refer to the operating instructions and safety information that came with your garage door opener or other equipment you intend to operate with the HomeLink Universal Transceiver. If you do not have this information, you should contact the manufacturer of the equipment.

If your garage door opener was manufactured before April 1982, you may not be able to program HomeLink to operate it. Garage door openers manufactured before that date do not have a safety feature that causes them to stop and reverse if an obstacle is detected during closing, increasing the risk of injury. If you have questions, call (800) 355-3515.

The HomeLink transmitter stores the code in a permanent memory. There should be no need to retrain the transmitter if your vehicle’s battery goes dead or is disconnected.

If you are training HomeLink to operate a garage door or gate, it is recommended that you unplug the motor for that device during training. Repeatedly pressing the remote control button could burn out the motor.

Customer Assistance
If you have problems with training the HomeLink Universal Transceiver, or would like information on home products that can be operated by the transmitter, call (800) 355-3515. On the Internet, go to www.homelink.com.

### On EX and EX-L models
The HomeLink Universal Transceiver built into your vehicle can be programmed to operate remotely-controlled devices around your home, such as garage doors, lighting, or home security systems. It can replace up to three remote transmitters.

### Comfort and Convenience Features
238
Training HomeLink
Before you can use HomeLink to operate devices around your home, it must “learn” the proper codes. For example, to train HomeLink to open and close the garage door:

Before you begin — If you just took delivery of your vehicle and have not trained any of the buttons in HomeLink before, you should erase any previously learned codes before training the first button. To do this, press and hold the two outside buttons on the HomeLink transceiver for about 20 seconds, until the red light flashes. Release the buttons, then proceed to Step 1.

If you are training the second or third buttons, go directly to Step 1.

1. Unplug the garage door opener motor from the house current.

2. Hold the end of the garage door opener remote control 2 to 5 inches from HomeLink. Make sure you are not blocking your view of the red light in HomeLink.

3. Select the HomeLink button you want to train.

4. Press the button on the remote control and the button on HomeLink at the same time. Hold down both buttons.

CONTINUED
Canadian Owners:
The remote control you are training from may stop transmitting after two seconds. This is not long enough for HomeLink to learn the code. Release and press the button on the remote control every two seconds until HomeLink has learned the code.

5. The red light in HomeLink should begin flashing. It will flash slowly at first, then rapidly.

6. When the red light flashes rapidly, release both buttons. HomeLink should have learned the code from the remote control.

7. Plug in the garage door opener motor, then test the HomeLink transceiver button by pushing it. It should operate the garage door.

If the button does not work, repeat this procedure to train it again. If it still does not work, you may have a variable or rolling code garage door opener. Test this by pressing and holding the HomeLink transceiver button you just trained. If the red light blinks for two seconds, then stays on, you have a rolling code garage door opener. You may be able to verify this with the manufacturer’s documentation. Go to “Training With a Rolling Code System.”

8. Repeat these steps to train the other two HomeLink buttons to operate any other remotely-controlled devices around your home (lighting, automatic gate, security system, etc.).

Training With a Rolling Code System
For security purposes, newer garage door opening systems use a “rolling” or variable code. Information from the remote control and the garage door opener are needed before HomeLink can operate the garage door opener.

The “Training HomeLink” procedure trains HomeLink to the proper garage door opener code. The following procedure synchronizes HomeLink to the garage door opener so they send and receive the correct codes.
It may be helpful to have someone assist you with this procedure.

1. Make sure you have properly completed the “Training HomeLink” procedure.

2. Find the “Training” button on your garage door opener unit. The location will vary, depending on the manufacturer. The manufacturer’s documentation may help.

3. Press the Training button on the garage door opener unit until the light next to the button comes on, then release it. The light may blink, or come on and stay on. You then have approximately 30 seconds to complete the following steps.

4. Press and hold the button on HomeLink for 3 – 4 seconds. (The same button you trained with the “Training HomeLink” procedure.)

5. Press and hold the HomeLink button again for 3 – 4 seconds. This should turn off the training light on the garage door opener unit. (Some systems may require you to press the button up to three times.)

6. Press the HomeLink button again. It should operate the garage door.
Retraining a Button
To train an already programmed transmitter button to operate a new device:

1. Select the HomeLink button you want to train.

2. Press and hold the HomeLink button until the red light begins to flash slowly (approximately 20 seconds).

3. While continuing to hold the HomeLink button, place the remote control for the device 2 to 5 inches from HomeLink.

4. Press and hold the button on the remote control. Hold both buttons until the red light begins to flash rapidly.

5. Release both buttons. HomeLink should now be trained to operate the device.

Erasing Codes
To erase the codes stored in all three buttons, press and hold the two outside buttons until the red light begins to flash, then release the buttons.

You should erase all three codes before selling the vehicle.

As required by the FCC:
This device complies with Part 15 of the FCC rules. Operation is subject to the following two conditions: (1) This device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

Changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate the equipment.

This device complies with Industry Canada Standard RSS-210. Operation is subject to the following two conditions: (1) this device may not cause interference, and (2) this device must accept any interference that may cause undesired operation of the device.
Before you begin driving your Honda, you should know what gasoline to use, and how to check the levels of important fluids. You also need to know how to properly store luggage or packages. The information in this section will help you. If you plan to add any accessories to your vehicle, please read the information in this section first.
### Break-in Period, Gasoline

**Break-in Period**
Help assure your vehicle’s future reliability and performance by paying extra attention to how you drive during the first 600 miles (1,000 km). During this period:

- Avoid full-throttle starts and rapid acceleration.

- Avoid hard braking. New brakes need to be broken-in by moderate use for the first 200 miles (300 km).

- Do not change the oil until the recommended time or mileage interval shown in the maintenance schedule.

You should follow these same recommendations with an overhauled or exchanged engine, or when the brakes are replaced.

We also recommend that you should not tow a trailer during the first 500 miles (800 km).

**Gasoline**
Your Honda is designed to operate on unleaded gasoline with a pump octane number of 86 or higher. Use of a lower octane gasoline can cause a persistent, heavy metallic rapping noise in the engine that can lead to mechanical damage.

We recommend gasolines containing detergent additives that help prevent fuel system and engine deposits.

Using gasoline containing lead will damage your vehicle’s emissions controls. This contributes to air pollution.

---

244 Before Driving
In Canada, some gasolines contain an octane-enhancing additive called MMT. If you use such gasolines, your emission control system performance may deteriorate and the Malfunction Indicator Lamp on your instrument panel may turn on. If this happens, contact your authorized Honda dealer for service.

Filling the Fuel Tank

1. Because the fuel fill cap is on the driver’s side of the vehicle, park with that side closest to the service station pumps.

2. Open the fuel fill door by pulling on the handle to the left of the driver’s seat.

Before refueling, make sure the rear sliding door on the driver’s side is closed.

**WARNING**

Gasoline is highly flammable and explosive. You can be burned or seriously injured when handling fuel.

- Stop the engine and keep heat, sparks, and flame away.
- Handle fuel only outdoors.
- Wipe up spills immediately.
3. Remove the fuel fill cap slowly. You may hear a hissing sound as pressure inside the tank escapes. Place the cap in the holder on the fuel fill door.

4. Stop filling the tank after the fuel nozzle automatically clicks off. Do not try to “top off” the tank, leave some room for the fuel to expand with temperature changes.

Your vehicle has an on-board refueling vapor recovery system to help keep fuel vapors from going into the atmosphere. If the fuel nozzle keeps clicking off even though the tank is not full, there may be a problem with this system. Consult your dealer.

5. Screw the fuel fill cap back on, tighten it until it clicks several times. If you do not properly tighten the cap, the Malfunction Indicator Lamp may come on (see page 371).

6. Push the fuel fill door closed until it latches.

Opening the Hood

1. Shift to Park or Neutral and set the parking brake. Pull the hood release handle located under the lower left corner of the dashboard. The hood will pop up slightly.
If you can open the hood without lifting the hood latch handle, or the hood latch handle moves stiffly or does not spring back as before, the mechanism should be cleaned and lubricated (see page 313).

2. Standing in front of the vehicle, put your fingers under the front edge of the hood. The hood latch handle is above the “H” logo. Pull up on this handle until it releases the hood. Lift the hood.

3. Pull the support rod out of its clip and insert the end into the hole on the driver's side of the hood.
To close the hood, lift it up slightly to remove the support rod from the hole. Put the support rod back into its holding clip. Lower the hood to about a foot (30 cm) above the fender, then let it drop.

After closing the hood, make sure it is securely latched.

Oil Check

Check the engine oil level every time you fill the vehicle with fuel. Wait a few minutes after turning the engine off before you check the oil.

1. Remove the dipstick (orange handle).
2. Wipe the dipstick with a clean cloth or paper towel.
3. Insert it all the way back in its tube.

4. Remove the dipstick again and check the level. It should be between the upper and lower marks.

If it is near or below the lower mark, see Adding Oil on page 297.

Look at the coolant level in the radiator reserve tank. Make sure it is between the MAX and MIN lines. If it is below the MIN line, see Adding Engine Coolant on page 301 for information on adding the proper coolant.

Refer to Owner Maintenance Checks on page 295 for information on checking other items in your Honda.
The condition of your vehicle and your driving habits are the two most important things that affect the fuel mileage you get.

**Vehicle Condition**
Always maintain your vehicle according to the maintenance schedule. This will keep it in top operating condition.

An important part of that maintenance is the **Owner Maintenance Checks** (see page 295). For example, an underinflated tire causes more “rolling resistance,” which uses fuel. It also wears out faster, so check the tire pressure at least monthly.

In winter, the build-up of snow on your vehicle’s underside adds weight and rolling resistance. Frequent cleaning helps your fuel mileage and reduces the chance of corrosion.

**Driving Habits**
You can improve fuel economy by driving moderately. Rapid acceleration, abrupt cornering, and hard braking use more fuel.

Always drive in the highest gear that allows the engine to run and accelerate smoothly.

Depending on traffic conditions, try to maintain a constant speed. Every time you slow down and speed up, your vehicle uses extra fuel. Use the cruise control, when appropriate, to increase fuel economy.

A cold engine uses more fuel than a warm engine. It is not necessary to “warm-up” a cold engine by letting it idle for a long time. You can drive away in about a minute, no matter how cold it is outside. The engine will warm up faster, and you get better fuel economy. To cut down on the number of “cold starts,” try to combine several short trips into one.

The air conditioning puts an extra load on the engine which makes it use more fuel. Turn off the A/C to cut down on air conditioning use. Use the flow-through ventilation when the outside air temperature is moderate.
Modifying your vehicle, or installing some non-Honda accessories, can make your vehicle unsafe. Before you make any modifications or add any accessories, be sure to read the following information.

**Accessories**
Your dealer has Honda accessories that allow you to personalize your vehicle. These accessories have been designed and approved for your vehicle, and are covered by warranty.

Non-Honda accessories are usually designed for universal applications. Although aftermarket accessories may fit on your vehicle, they may not meet factory specifications, and could adversely affect your vehicle’s handling and stability. (See “Modifications” on page 252 for additional information.)

**WARNING**

Improper accessories or modifications can affect your vehicle’s handling, stability, and performance, and cause a crash in which you can be hurt or killed.

Follow all instructions in this owner’s manual regarding accessories and modifications.

When properly installed, cellular phones, alarms, two-way radios, and low-powered audio systems should not interfere with your vehicle’s computer-controlled systems, such as the SRS and anti-lock brake system.

However, if electronic accessories are improperly installed, or exceed your vehicle’s electrical system capacity, they can interfere with the operation of your vehicle, or even cause the airbags to deploy.

Before installing any accessory:

- Make sure the accessory does not obscure any lights, or interfere with proper vehicle operation or performance.

- Be sure electronic accessories do not overload electrical circuits (see page 374).

- Have the installer contact your Honda dealer for assistance before installing any electronic accessory.

If possible, have your dealer inspect the final installation.
Modifications
Removing parts from your vehicle, or replacing components with non-Honda (aftermarket) components could seriously affect your vehicle's handling, stability, and reliability.

Some examples are:
• Lowering the vehicle with an aftermarket suspension kit that significantly reduces ground clearance can allow the undercarriage to impact speed bumps or other raised objects, which could cause the airbags to deploy.
• Raising the vehicle with an aftermarket suspension kit can affect the handling and stability.
• Aftermarket wheels, because they are a universal design, can cause excessive stress on suspension components.

• Larger or smaller wheels and tires can interfere with the operation of your vehicle’s anti-lock brakes and other systems.

Do not modify your steering wheel or any other part of your Supplemental Restraint System. Modifications could make the system ineffective.

If you plan to modify your vehicle, consult with your Honda dealer.

Additional Safety Precautions
• Do not attach or place objects on the front airbag covers. Any object attached to or placed on the covers marked “SRS AIRBAG,” in the center of the steering wheel and on top of the dashboard, could interfere with the proper operation of the airbags. Or, if the airbags inflate, the objects could be propelled inside the vehicle and hurt someone.

• Do not attach hard objects on or near a front door. If a side airbag inflates, a cup holder or other hard object attached on or near the door could be propelled inside the vehicle and hurt someone.

• Do not place any objects over the outside edge of a front seat-back. Covering the outside edge of a front seat-back, with a non-Honda seat cover for example, could prevent the airbag from inflating properly.

• Do not modify the front seats. This could make the driver’s seat position sensor and the front passenger’s weight sensors ineffective.
Carrying Cargo

Your vehicle has several convenient storage areas so you can stow cargo safely.

The glove box, and the pockets in the front doors and seat-backs, are designed for small, lightweight items. The cargo area is intended for larger, heavier items. In addition, the seats in the second row can be removed and the bench seat in the third row can be folded into the floor to allow you to carry more cargo or longer items.

However, carrying too much cargo, or improperly storing it, can affect your vehicle’s handling, stability, and operation, and make it unsafe. Before carrying any type of cargo, be sure to read the following pages.
Carrying Cargo

Load Limit
The maximum load for your vehicle is 1,158 lbs (525 kg).

This figure includes the total weight of all occupants, cargo, accessories, and the tongue weight if you are towing a trailer.

To figure out how much cargo you can carry:

• Add up the weight of all occupants.
• If you are towing a trailer, add the tongue weight to the number above.
• Subtract the total from 1,158 lbs (525 kg).

The final number is the total weight of cargo you can carry.

When you load luggage, the total weight of the vehicle, all passengers, cargo, and trailer tongue load must not exceed the Gross Vehicle Weight Rating (GVWR). The load for the front and rear axles also must not exceed the Gross Axle Weight Rating (GAWR). The GVWR and GAWR are printed on the tire information label attached to the driver’s doorjamb (see page 386).

**WARNING**
Overloading or improper loading can affect handling and stability and cause a crash in which you can be hurt or killed.

Follow all load limits and other loading guidelines in this manual.

Carrying Items in the Passenger Compartment
• Store or secure all items that could be thrown around and hurt someone during a crash.
• Be sure items placed on the floor behind the front seats cannot roll under the seats and interfere with the driver’s ability to operate the pedals, or with the proper operation of the seats.
• Keep the glove box closed while driving. If the lid is open, a passenger could injure their knees during a crash or sudden stop.

---

This figure includes the total weight of all occupants, cargo, accessories, and the tongue weight if you are towing a trailer.

The final number is the total weight of cargo you can carry.

When you load luggage, the total weight of the vehicle, all passengers, cargo, and trailer tongue load must not exceed the Gross Vehicle Weight Rating (GVWR). The load for the front and rear axles also must not exceed the Gross Axle Weight Rating (GAWR). The GVWR and GAWR are printed on the tire information label attached to the driver’s doorjamb (see page 386).

**WARNING**
Overloading or improper loading can affect handling and stability and cause a crash in which you can be hurt or killed.

Follow all load limits and other loading guidelines in this manual.

Carrying Items in the Passenger Compartment
• Store or secure all items that could be thrown around and hurt someone during a crash.
• Be sure items placed on the floor behind the front seats cannot roll under the seats and interfere with the driver’s ability to operate the pedals, or with the proper operation of the seats.
• Keep the glove box closed while driving. If the lid is open, a passenger could injure their knees during a crash or sudden stop.
Carrying Cargo in the Cargo Area or on a Roof Top Carrier
- Distribute cargo evenly on the floor of the cargo area, placing the heaviest items on the bottom and as far forward as possible. Tie down items that could be thrown about the vehicle during a crash or sudden stop.
- If you carry large items that prevent you from closing the tailgate, exhaust gas can enter the passenger area. To avoid the possibility of carbon monoxide poisoning, follow the instructions on page 66.

- If you carry any items on a roof top carrier, be sure the total weight of the rack and the items on it does not exceed 150 lb (68 kg).
If you use an accessory roof top carrier, the roof top carrier weight limit may be lower. Refer to the information that came with your roof top carrier.

Side Cargo Net
The side cargo net can be installed on the driver’s side panel in the cargo area to secure small items. To install the side cargo net, hook each loop on the four corners of the net to the tabs on the left side panel. When you fold down the third seat, store the head restraints in the side cargo net.
You can use the cargo net to secure items in the cargo area, and store small items between the two halves of the net. To install the cargo net, hook the loops on the four corners of the net to the tabs at both sides of the tailgate sill.

On EX and EX-L models
You can use the cargo net to secure items in the cargo area, and store small items between the two halves of the net. To install the cargo net, hook the loops on the four corners of the net to the tabs at both sides of the tailgate sill.

There are cargo hooks for plastic grocery bags on the back of the third row seat. They are designed to hold light items. Heavy objects may damage the hooks.
This section gives you tips on starting the engine under various conditions, and how to operate the automatic transmission. It also includes important information on parking your vehicle, the braking system, the Traction Control System, and facts you need if you are planning to tow a trailer.

Preparing to Drive

You should do the following checks and adjustments every day before you drive your vehicle.

1. Make sure all windows, mirrors, and outside lights are clean and unobstructed. Remove frost, snow, or ice.

2. Check that the hood and tailgate are fully closed.

3. Visually check the tires. If a tire looks low, use a gauge to check its pressure.

4. Check that any items you may be carrying with you inside are stored properly or fastened down securely.

5. Check the adjustment of the seat (see page 110).

6. Check the adjustment of the inside and outside mirrors (see page 128).

7. Check the adjustment of the steering wheel (see page 88).

8. Make sure the doors and tailgate are securely closed and locked.

9. Fasten your seat belt. Check that your passengers have fastened their seat belts (see page 17).

10. Turn the ignition switch ON (II). Check the indicator lights in the instrument panel.

11. Start the engine (see page 259).

12. Check the gauges and indicator lights in the instrument panel (see page 71).
1. Apply the parking brake.

2. In cold weather, turn off all electrical accessories to reduce the drain on the battery.

3. Make sure the shift lever is in Park. Press on the brake pedal.

4. Without touching the accelerator pedal, turn the ignition key to the START (III) position. If the engine does not start right away, do not hold the key in START (III) for more than 15 seconds at a time. Pause for at least 10 seconds before trying again.

5. If the engine does not start within 15 seconds, or starts but stalls right away, repeat step 4 with the accelerator pedal pressed half-way down. If the engine starts, release pressure on the accelerator pedal so the engine does not race.

6. If the engine still does not start, press the accelerator pedal all the way down and hold it there while starting in order to clear flooding. As before, keep the ignition key in the START (III) position for no more than 15 seconds. Return to step 5 if the engine does not start. If it starts, lift your foot off the accelerator pedal so the engine does not race.

Starting in Cold Weather at High Altitude (Above 8,000 feet/2,400 meters)

An engine is harder to start in cold weather. The thinner air found at high altitude above 8,000 feet (2,400 meters) adds to the problem. Use the following procedure:

1. Turn off all electrical accessories to reduce the drain on the battery.

2. Push the accelerator pedal halfway to the floor and hold it there while starting the engine. Do not hold the ignition key in START (III) for more than 15 seconds. When the engine starts, release the accelerator pedal gradually as the engine speeds up and smooths out.

3. If the engine fails to start in step 2, push the accelerator pedal to the floor and hold it there while you try to start the engine for no more than 15 seconds. If the engine does not start, return to step 2.
Your Honda’s transmission has five forward speeds, and is electronically controlled for smoother shifting. It also has a “lock-up” torque converter for better fuel economy. You may feel what seems like another shift when the converter locks.

The “D” indicator comes on for a few seconds when you turn the ignition switch to ON (II). If it flashes while driving (in any shift position), it indicates a possible problem in the transmission. Avoid rapid acceleration and have the transmission checked by an authorized Honda dealer as soon as possible.

The malfunction indicator lamp may come on along with the “D” indicator if there is a problem in the automatic transmission control system.
This position mechanically locks the transmission. Use Park whenever you are turning off or starting the engine. To shift out of Park, you must press on the brake pedal and have your foot off the accelerator pedal. Pull the shift lever towards you, then move it out of Park.

If you have done all of the above and still cannot move the lever out of Park, see Shift Lock Release on page 263.

You must also pull the shift lever towards you to shift into Park. To avoid transmission damage, come to a complete stop before shifting into Park. The shift lever must be in Park before you can remove the key from the ignition switch.
Neutral (N) — Use Neutral if you need to restart a stalled engine, or if it is necessary to stop briefly with the engine idling. Shift to Park position if you need to leave the vehicle for any reason. Press on the brake pedal when you are moving the shift lever from Neutral to another gear.

Drive (D) — Use this position for your normal driving. The transmission automatically selects a suitable gear for your speed and acceleration. You may notice the transmission shifting up at higher speeds when the engine is cold. This helps the engine warm up faster.

Drive (D3) — This position is similar to D, except only the first three gears are selected. Use D3 when towing a trailer in hilly terrain, or to provide engine braking when going down a steep hill. D3 can also keep the transmission from cycling between third and fourth gears in stop-and-go driving.

For faster acceleration when in D3 or D, you can get the transmission to automatically downshift by pushing the accelerator pedal to the floor. The transmission will shift down one or two gears, depending on your speed.

Reverse (R) — To shift to Reverse from Park, see the explanation under Park. To shift to Reverse from Neutral, come to a complete stop and then shift. Pull the shift lever towards you before shifting into Reverse from Neutral.
Second (2) — To shift to Second, pull the shift lever towards you, then shift to the lower gear. This position locks the transmission in second gear. It does not downshift to first gear when you come to a stop. Second gives you more power when climbing, and increased engine braking when going down steep hills. Use second gear when starting out on a slippery surface or in deep snow. It will help reduce wheelspin. When driving down hill with a trailer, use the Second position.

First (1) — To shift from Second to First, pull the shift lever towards you, then shift to the lower gear. With the lever in this position, the transmission locks in First gear. By upshifting and downshifting through 1, 2, D1, and D, you can operate this transmission much like a manual transmission without a clutch pedal.

Engine Speed Limiter
If you exceed the maximum speed for the gear you are in, the engine speed will enter into the tachometer’s red zone. If this occurs, you may feel the engine cut in and out. This is caused by a limiter in the engine’s computer controls. The engine will run normally when you reduce the RPM below the red zone.

Shift Lock Release
This allows you to move the shift lever out of Park if the normal method of pushing on the brake pedal and pulling the shift lever does not work.

1. Set the Parking brake.

2. Remove the key from the ignition switch.

3. Place a cloth on the edge of the Shift Lock Release slot cover on the steering column. Remove the cover by carefully prying on the edge with a small flat-tipped screwdriver (not included in the tool kit).
4. Insert the key in the Shift Lock Release slot.

5. Push down on the key while you pull the shift lever towards you and move it out of Park to Neutral.

6. Remove the key from the Shift Lock Release slot, then install a new cover. Depress the brake pedal and restart the engine.

If you need to use the Shift Lock Release, it means your vehicle is developing a problem. Have the vehicle checked by your Honda dealer.
Always use the parking brake when you park your vehicle. The indicator on the instrument panel shows that the parking brake is not fully released; it does not indicate that the parking brake is firmly set. Make sure the parking brake is set firmly or your vehicle may roll if it is parked on an incline.

Set the parking brake before you put the transmission in Park. This keeps the vehicle from moving and putting pressure on the parking mechanism in the transmission — making it easier to move the shift lever out of Park when you want to drive away.

If the vehicle is facing uphill, turn the front wheels away from the curb.

If the vehicle is facing downhill, turn the front wheels toward the curb.

Make sure the parking brake is fully released before driving away. Driving with the parking brake partially set can overheat or damage the rear brakes.

Parking Tips

• Make sure the windows are closed.

• Turn off the lights.

• Place any packages, valuables, etc., in the cargo area or take them with you.

• Lock the doors and the tailgate with the key or the remote transmitter.

• Never park over dry leaves, tall grass, or other flammable materials. The three way catalytic converter gets very hot, and could cause these materials to catch on fire.

Parking

Driving 265
When the brake pads need replacing, you will hear a distinctive metallic 'screeching' sound when you apply the brakes. If you do not have the brake pads replaced, they will begin screeching all the time.

Constant application of the brakes when going down a long hill builds up heat and reduces their effectiveness. Use the engine to assist the brakes by downshifting to a lower gear and taking your foot off the accelerator pedal.

Check your brakes after driving through deep water. Apply the brakes moderately to see if they feel normal. If not, apply them gently and frequently until they do. Since a longer distance is needed to stop with wet brakes, be extra cautious and alert in your driving.

Brake Wear Indicators
All four brakes have audible brake wear indicators.
When the brake pads need replacing, you will hear a distinctive metallic "screeching" sound when you apply the brakes. If you do not have the brake pads replaced, they will begin screeching all the time.

Your brakes may sometimes squeal or squeak when you apply them lightly. Do not confuse this with the brake wear indicators. The indicators make a very audible "screeching."

Your Honda is equipped with disc brakes at all four wheels. A power assist helps reduce the effort needed on the brake pedal. The ABS helps you retain steering control when braking very hard.

Put your foot on the brake pedal only when you intend to brake. Resting your foot on the pedal keeps the brakes applied lightly, causing them to build up heat. Heat build-up can reduce how well your brakes work. It also keeps your brake lights on all the time, confusing drivers behind you.
The Braking System

Anti-lock Brakes
Your vehicle has an Anti-lock Brake System (ABS) as standard equipment. ABS helps to prevent the wheels from locking up and skidding during hard braking, allowing you to retain steering control.

When the front tires skid, you lose steering control; the vehicle continues straight ahead even though you turn the steering wheel. The ABS helps to prevent lock-up and helps you retain steering control by pumping the brakes rapidly; much faster than a person can do it.

The ABS also balances the front-to-rear braking distribution according to vehicle loading.

You should never pump the brake pedal; this defeats the purpose of the ABS. Let the ABS work for you by always keeping firm, steady pressure on the brake pedal as you steer away from the hazard. This is sometimes referred to as “stomp and steer.”

You will feel a pulsation in the brake pedal when the ABS activates, and you may hear some noise. This is normal; it is the ABS rapidly pumping the brakes.

Activation varies with the amount of traction your tires have. On dry pavement, you will need to press on the brake pedal very hard before you activate the ABS. However, you may feel the ABS activate immediately if you are trying to stop on snow or ice.

CONTINUED

Driving  267
Important Safety Reminders

ABS does not reduce the time or distance it takes to stop the vehicle, it only helps with steering control during braking. You should always maintain a safe following distance from other vehicles.

ABS will not prevent a skid that results from changing direction abruptly, such as trying to take a corner too fast or making a sudden lane change. Always drive at a safe, prudent speed for the road and weather conditions.

ABS cannot prevent a loss of stability. Always steer moderately when you are braking hard. Severe or sharp steering wheel movement can still cause your vehicle to veer into oncoming traffic or off the road.

A vehicle with ABS may require a longer distance to stop on loose or uneven surfaces, such as gravel or snow, than a vehicle without anti-lock. Slow down and allow a greater distance between vehicles under those conditions.

ABS Indicator

The ABS is self-checking. If anything goes wrong, the ABS indicator on the instrument panel comes on (see page 74). This means the anti-lock function of the braking system has shut down. The brakes still work like a conventional system without anti-lock, providing normal stopping ability. You should have the dealer inspect your vehicle as soon as possible.
If the ABS indicator and the brake system indicator come on together, and the parking brake is fully released, the front-to-rear braking distribution system may also shut down.

Test your brakes as instructed on page 373. If the brakes feel normal, drive slowly and have your vehicle repaired by your dealer as soon as possible. Avoid sudden hard braking which could cause the rear wheels to lock up and possibly lead to a loss of control.

The TCS indicator will come on along with the ABS indicator if there is a problem with the anti-lock brake system.

**Traction Control System**

Your Honda is equipped with a Traction Control System (TCS) to assist you in maintaining traction while driving slowly on loose or slippery surfaces. The TCS assists only in low-speed, low-traction conditions; up to approximately 18 mph (30 km/h).

TCS monitors the speed of all four wheels. When it senses a front wheel losing traction, it applies braking to that wheel. The TCS indicator flashes when this occurs.

Driving with TCS requires no special skills or technique. The TCS does not control your vehicle’s whole braking system and cannot prevent skidding if you enter a corner too fast. It is still your responsibility to drive at reasonable speeds and to leave a sufficient margin of safety.
When starting out or driving at low speeds on a loose or slippery road surface, you may notice that the vehicle does not respond to the accelerator in the same way it does at other times. This is a sign TCS is activating. You will see the TCS indicator light flash.

You should still install winter tires on your vehicle during the winter. Make sure to use the same size originally supplied with vehicle. Exercise the same caution in winter driving as you would if your vehicle was not equipped with TCS.

Driving with the compact spare tire installed (see page 352) may activate the TCS. You should turn off the system.

If the brakes overheat while TCS is activating, the TCS indicator will stop flashing and stay on temporarily. This indicates that TCS has turned off. After the brakes have cooled down (usually for about 10 minutes), TCS will turn back on and the indicator will turn off.

This switch is under the side vent. It lets you turn the Traction Control System on and off. You cannot turn off the TCS while the TCS indicator light is flashing.

Deactivate the system by pressing the TCS On/Off switch. The TCS indicator light comes on as a reminder. Pressing the switch again turns the system back on.
The Traction Control System turns on every time you start the engine, even if you turned it off the last time you drove the vehicle.

**TCS Indicator**
The TCS indicator comes on or flashes under the following conditions:

- When you turn the ignition switch to ON (II).
- When you manually turn off TCS.
- It flashes when TCS is regulating wheelspin.
- If the system’s diagnostics senses a problem with TCS, the indicator will come on and stay on.
- If the brakes overheat, the indicator will come on.

If the TCS indicator comes on and stays on for more than 10 minutes while driving, pull to the side of the road when it is safe and turn off the engine. Reset the system by restarting the engine, and watch the TCS indicator. If the indicator remains on, or comes back on while driving, have the system inspected by your Honda dealer. You can still drive the vehicle without TCS.

This indicator will come on along with the ABS indicator if there is a problem in the anti-lock brake system (see **ABS Indicator** on page 268).

The TCS indicator may occasionally come on for one or two seconds and then go out. This is normal.
Driving Technique — Always drive slower than you would in dry weather. It takes your vehicle longer to react, even in conditions that may seem just barely damp. Apply smooth, even pressure to all the controls. Abrupt steering wheel movements or sudden, hard application of the brakes can cause loss of control in wet weather. Be extra cautious for the first few miles (kilometers) of driving while you adjust to the change in driving conditions. This is especially true in snow. A person can forget some snow-driving techniques during the summer months. Practice is needed to relearn those skills.

Exercise extra caution when driving in rain after a long dry spell. After months of dry weather, the first rains bring oil to the surface of the roadway, making it slippery.

Visibility — Being able to see clearly in all directions and being visible to other drivers are important in all weather conditions. This is more difficult in bad weather. To be seen more clearly during daylight hours, turn on your headlights.

Inspect your windshield wipers and washers frequently. Keep the windshield washer reservoir full of the proper fluid. Have the windshield wiper blades replaced if they start to streak the windshield or leave parts unwiped. Use the defroster and air conditioning to keep the windows from fogging up on the inside (see pages 149 and 159/164).
Traction — Check your tires frequently for wear and proper pressure. Both are important in preventing “hydroplaning” (loss of traction on a wet surface). In the winter, mount snow tires on all four wheels for the best handling.

Watch road conditions carefully, they can change from moment to moment. Wet leaves can be as slippery as ice. “Clear” roads can have patches of ice. Driving conditions can be very hazardous when the outside temperature is near freezing. The road surface can become covered with areas of water puddles mixed with areas of ice, so your traction can change without warning.

Be careful when downshifting. If traction is low, you can lock up the drive wheels for a moment and cause a skid.
Your Odyssey has been designed to tow a trailer, as well as for carrying passengers and their cargo.

To safely tow a trailer, you must observe the load limits, use the proper equipment, and follow the guidelines in this section.

**WARNING**

Exceeding any load limit or improperly loading your vehicle and trailer can cause a crash in which you can be seriously hurt or killed.

Check the loading of your vehicle and trailer carefully before starting to drive.

**Load Limits**

- **Total Trailer Weight:** The maximum weight you can tow depends on several factors. See page 275 for limits for your towing situation. Towing a load that is too heavy can seriously affect your vehicle’s handling and performance.
To achieve a proper tongue load, start by loading 60 percent of the load toward the front of the trailer and 40 percent toward the rear, then re-adjust the load as needed.

### Towing a Trailer

<table>
<thead>
<tr>
<th>Number of Occupants*</th>
<th>Equipped with transmission cooler and power steering fluid cooler</th>
</tr>
</thead>
<tbody>
<tr>
<td>2</td>
<td>3,500 lbs (1,580 kg)</td>
</tr>
<tr>
<td>3</td>
<td>3,350 lbs (1,520 kg)</td>
</tr>
<tr>
<td>4</td>
<td>3,200 lbs (1,450 kg)</td>
</tr>
<tr>
<td>5</td>
<td>3,050 lbs (1,380 kg)</td>
</tr>
<tr>
<td>6</td>
<td>2,900 lbs (1,310 kg)</td>
</tr>
<tr>
<td>7</td>
<td>650 lbs (295 kg)**</td>
</tr>
</tbody>
</table>

*: Including driver. Based on 150 lbs (70 kg) per occupant.

**: Weight limited to avoid exceeding rear GAWR (see page 276).

**Tongue Load:** The weight that the tongue of a fully-loaded trailer puts on the hitch should be approximately 10 percent of the trailer weight. Too little tongue load can make the trailer unstable and cause it to sway. Too much tongue load reduces front-tire traction and steering control.
The best way to confirm that vehicle and trailer weights are within limits is to have them checked at a public scale.

Using a suitable scale or a special tongue load gauge, check the tongue load the first time you set up a towing combination (a fully-loaded vehicle and trailer), then recheck the tongue load whenever the conditions change.

- **Gross Vehicle Weight Rating (GVWR):**
  The maximum allowable weight of the vehicle, all occupants, all cargo and the tongue load is 5,665 lbs (2,570 kg).

- **Gross Axle Weight Rating (GAWR):**
  The maximum allowable weights on the vehicle axles are 2,833 lbs (1,285 kg) on the front axle, and 2,845 lbs (1,290 kg) on the rear axle.

- **Gross Combined Weight Rating (GCWR):**
  The maximum allowable weight of the fully loaded vehicle and trailer is 8,265 lbs (3,750 kg) with the proper hitch and fluid coolers. (See page 277 for information about fluid coolers.)

**WARNING**

Exceeding load limits or improperly loading your vehicle and trailer can cause a crash in which you can be seriously injured or killed.

Check the loading of your vehicle and trailer carefully before starting to drive.

**Checking Loads**

The maximum allowable weights on the vehicle axles are 2,833 lbs (1,285 kg) on the front axle, and 2,845 lbs (1,290 kg) on the rear axle.

The maximum allowable weight of the fully loaded vehicle and trailer is 8,265 lbs (3,750 kg) with the proper hitch and fluid coolers. (See page 277 for information about fluid coolers.)

Using a suitable scale or a special tongue load gauge, check the tongue load the first time you set up a towing combination (a fully-loaded vehicle and trailer), then recheck the tongue load whenever the conditions change.
Towing Equipment and Accessories
Towing can require a variety of equipment, depending on the size of your trailer, how it will be used, and how much load you are towing.

Discuss your needs with your trailer sales or rental agency, and follow the guidelines in the rest of this section. Also make sure that all equipment is properly installed and that it meets federal, state, province, and local regulations.

Hitches
Any hitch used on your vehicle must be properly bolted to the underbody, using the six threaded holes provided. A hitch and the required fluid coolers designed especially for your Odyssey can be obtained from your Honda dealer.

Weight Distributing Hitch
If the total trailer weight is more than 1,850 lbs (840 kg), you must also use a weight distributing hitch. This device transfers weight from the vehicle’s rear wheels to the front wheels, and to the trailer’s wheels. Carefully follow the hitch maker’s instructions for proper installation and adjustment.

Safety Chains
Always use safety chains. Make sure they are secured to both the trailer and hitch, and that they cross under the tongue so they can catch the trailer if it becomes unhitched. Leave enough slack to allow the trailer to turn corners easily, but do not let the chains drag on the ground.

Sway Control
If the total trailer weight exceeds 2,000 lbs (900 kg), you should install a sway control device to minimize swaying that can occur in crosswinds and in normal and emergency driving maneuvers. Your trailer maker can tell you what kind of sway control you need and how to install it.

Transmission Fluid Cooler and Power Steering Fluid Cooler
You must also have a transmission fluid cooler and a power steering fluid cooler installed. These coolers are available only from your Honda dealer.

CONTINUED
**Trailer Brakes**
Honda recommends that any trailer having a total weight of 1,000 lbs (450 kg) or more be equipped with its own electric or surge-type brakes.

If you choose electric brakes, be sure they are electronically actuated. Do not attempt to tap into your vehicle's hydraulic system. No matter how successful it may seem, any attempt to attach trailer brakes to your vehicle's hydraulic system will lower braking effectiveness and create a potential hazard. See your trailer dealer for more information on installing electric brakes.

**Trailer Lights**
All states and Canadian provinces require some type of trailer lights. Check requirements for the areas where you plan to tow.

Your vehicle has a trailer lighting connector located behind the left side panel in the cargo area. Refer to the drawing above for the wiring color code and purpose of each pin.

To use the trailer lighting connector, you will need a wiring harness and converter. This comes with the Honda hitch (see page 277), or it may be obtained separately from your dealer.

If you use a non-Honda trailer lighting harness and converter, you can get the connector and pins that mate with the connector in your vehicle from your Honda dealer.
When preparing to tow, and before driving away, be sure to check the following:

- The vehicle has been properly serviced, and the tires, brakes, suspension, and cooling system are in good operating condition.
- If you tow frequently, follow the Severe Conditions maintenance schedule.
- All weights and loads are within limits (see pages 274 and 276).
- The hitch, safety chains, and any other attachments are secure.

**Pre-Tow Checklist**

**Additional Trailer Equipment**

Many states and Canadian provinces require special outside mirrors when towing a trailer. Even if they don’t, you should install special mirrors if you cannot clearly see behind you, or if the trailer creates a blind spot.

Ask your trailer sales or rental agency if any other items are recommended or required for your towing situation.

Since lighting and wiring vary in trailer type and brand, you should also have a qualified mechanic install a suitable connector between the vehicle and the trailer.

**Spare Vehicle Tire**

When towing a trailer, you should carry a full-size wheel and tire as a spare in case you have a flat. If you use the compact spare tire that came with the vehicle, it may adversely affect vehicle handling. See page 328 for information on proper tire size, and page 359 for information on how to store a full-size tire. When storing a full-size spare tire in the trailer, follow the trailer maker’s instructions.
Towing a Trailer

- All items on and in the trailer are properly secured and cannot shift while you drive.

- The lights and brakes on your vehicle and the trailer are working properly.

- Your vehicle tires and spare are properly inflated (see page 323), and the trailer tires and spare are inflated as recommended by the trailer maker.

- You may want to fill the fuel tank with premium fuel. Premium fuel provides improved performance.

Driving Safely With a Trailer

The added weight, length, and height of a trailer will affect your vehicle’s handling and performance, so driving with a trailer requires some special driving skills and techniques.

For your safety and the safety of others, take time to practice driving maneuvers before heading for the open road, and follow the guidelines discussed below.

Towing Speeds and Gears

Drive slower than normal in all driving situations, and obey posted speed limits for vehicles with trailers. Use the D position when towing a trailer on level roads. See “Driving on Hills” in the next column for additional gear information. Do not exceed 55 mph (88 km/h). At higher speeds, the trailer may sway or affect vehicle handling.

Making Turns and Braking

Make turns more slowly and wider than normal. The trailer tracks a smaller arc than your vehicle, and it can hit or run over something the vehicle misses. Allow more time and distance for braking. Do not brake or turn suddenly as this could cause the trailer to jackknife or turn over.

Driving on Hills

When climbing hills, closely watch your temperature gauge. If it nears the red mark, turn the air conditioning off, reduce speed and, if necessary, pull to the side of the road to let the engine cool.

If the automatic transmission shifts frequently while going up a hill, shift to Ds.
If you must stop when facing uphill, use the foot brake or parking brake. Do not try to hold the vehicle in place by pressing on the accelerator, as this can cause the automatic transmission to overheat.

When driving down hills, reduce your speed and shift down to 2nd gear. Do not “ride” the brakes, and remember it will take longer to slow down and stop when towing a trailer.

Handling Crosswinds and Buffeting
Crosswinds and air turbulence caused by passing trucks can disrupt your steering and cause trailer swaying. When being passed by a large vehicle, keep a constant speed and steer straight ahead. Do not try to make quick steering or braking corrections.

Backing Up
Always drive slowly and have someone guide you when backing up. Grip the bottom of the steering wheel; then turn the wheel to the left to get the trailer to move to the left, and turn the wheel right to move the trailer to the right.

Parking
Follow all normal precautions when parking, including putting the transmission in Park and firmly setting the parking brake. Also, place wheel chocks at each of the trailer’s tires.
This section explains the importance of keeping your vehicle well maintained and why you should follow basic maintenance safety precautions.

This section also includes Maintenance Schedules for normal driving and severe driving conditions, a Maintenance Record, and instructions for simple maintenance tasks you may want to take care of yourself.

If you have the skills and tools to perform more complex maintenance tasks on your Honda, you may want to purchase the Service Manual. See page 401 for information on how to obtain a copy, or see your Honda dealer.
Regularly maintaining your vehicle is the best way to protect your investment. Proper maintenance is essential to your safety and the safety of your passengers. It will also reward you with more economical, trouble-free driving, and help reduce air pollution.

This section includes instructions for simple maintenance tasks, such as checking and adding oil. Any service items not detailed in this section should be performed by a Honda technician or other qualified mechanic.

Some of the most important safety precautions are given here. However, we cannot warn you of every conceivable hazard that can arise in performing maintenance. Only you can decide whether or not you should perform a given task.

**WARNING**

Improperly maintaining this vehicle or failing to correct a problem before driving can cause a crash in which you can be seriously hurt or killed.

Always follow the inspection and maintenance recommendations and schedules in this owner's manual.

**WARNING**

Failure to properly follow maintenance instructions and precautions can cause you to be seriously hurt or killed.

Always follow the procedures and precautions in this owner's manual.
Important Safety Precautions
Before you begin any maintenance, make sure your vehicle is parked on level ground and that the parking brake is set. Also, be sure the engine is off. This will help to eliminate several potential hazards:

- **Carbon monoxide poisoning from engine exhaust.** Be sure there is adequate ventilation whenever you operate the engine.

- **Burns from hot parts.** Let the engine and exhaust system cool before touching any parts.

- **Injury from moving parts.** Do not run the engine unless instructed to do so.

Read the instructions before you begin, and make sure you have the tools and skills required.

To reduce the possibility of fire or explosion, be careful when working around gasoline or batteries. Use a commercially available degreaser or parts cleaner, not gasoline, to clean parts. Keep cigarettes, sparks, and flames away from the battery and all fuel-related parts.

You should wear eye protection and protective clothing when working near the battery or when using compressed air.
The Maintenance Schedule specifies how often you should have your vehicle serviced and what things need attention. It is essential that you have your vehicle serviced as scheduled to retain its high level of safety, dependability, and emissions control performance.

The services and time or distance intervals shown in the maintenance schedule assume you will use your vehicle as normal transportation for passengers and their possessions. You should also follow these recommendations:

- Avoid exceeding your vehicle's load limit. This puts excess stress on the engine, brakes, and many other parts of your vehicle. The load limit is shown on the tire information label on the driver's doorjamb.

- Operate your vehicle on reasonable roads within the legal speed limit.

- Drive your vehicle regularly over a distance of several miles (kilometers).

- Always use unleaded gasoline with the proper octane rating (see page 244).

Which Schedule to Follow:
Service your vehicle according to the time and mileage periods on one of the Maintenance Schedules on the following pages. Select the schedule for “Severe Conditions” if most of your driving is done under one or more of the conditions listed on that page. Otherwise, follow the schedule for “Normal Conditions.”
Your authorized Honda dealer knows your vehicle best and can provide competent, efficient service. However, service at a dealer is not mandatory to keep your warranties in effect. Maintenance may be done by any qualified service facility or person who is skilled in this type of automotive service. Keep all the receipts as proof of completion, and have the person who does the work fill out the Maintenance Record. Check your warranty booklet for more information.

We recommend the use of Honda parts and fluids whenever you have maintenance done. These are manufactured to the same high-quality standards as the original components, so you can be confident of their performance and durability.

U.S. Vehicles:
**Maintenance, replacement or repair of emissions control devices and systems may be done by any automotive repair establishment or individual using parts that are “certified” to EPA standards.**

According to state and federal regulations, failure to perform maintenance on the items marked with ≠ will not void your emissions warranties. However, Honda recommends that all maintenance services be performed at the recommended time or mileage period to ensure long-term reliability.
### Maintenance Schedule for Normal Conditions

#### Table of Contents

| Service at the indicated distance or time — whichever comes first. | miles x 1,000 | 15 | 30 | 45 | 60 | 75 | 90 | 105 | 120 |
|——|——|——|——|——|——|——|——|——|——|
| km x 1,000 | 24 | 48 | 72 | 96 | 120 | 144 | 168 | 192 |
| months | 12 | 24 | 36 | 48 | 60 | 72 | 84 | 96 |
| Replace engine oil | Replace every 7,500 miles (12,000 km) or 1 year |
| Replace engine oil filter | • | • | • | • | • | • | • | • |
| Check engine oil and coolant | • | • | • | • | • | • | • | • |
| Replace air cleaner element | • | • | • | • | • | • | • | • |
| Inspect and adjust drive belts | • | • | • | • |
| Inspect idle speed | • | • | • | • |
| Replace engine coolant | 120,000 miles (192,000 km) or 10 years, then every 60,000 miles (96,000 km) or 5 years |
| Replace transmission fluid | • | • | • | • |
| Inspect and adjust drive belts | • | • | • | • |
| Inspect idle speed | • | • | • | • |
| Replace front and rear brakes | • | • | • | • | • | • | • | • |
| Replace brake fluid | Every 3 years (independent of mileage) |
| Check parking brake adjustment | • | • | • | • | • | • | • | • |
| Replace dust and pollen filter | • | • | • | • |
| Rotate tires (Check tire inflation and condition at least once per month) | Rotate tires every 7,500 miles (12,000 km) |
| Tie rod ends, steering gear box, and boots | • | • | • | • | • | • | • | • |
| Suspension components | • | • | • | • | • | • | • | • |
| Driveshaft boots | • | • | • | • | • | • | • | • |
| Brake hoses and lines (including ABS) | • | • | • | • | • | • | • | • |
| All fluid levels and condition of fluids | • | • | • | • | • | • | • | • |
| Cooling system hoses and connections | • | • | • | • | • | • | • | • |
| Exhaust system | • | • | • | • | • | • | • | • |
| Fuel lines and connections | • | • | • | • | • | • | • | • |

---

**NOTE:** If you only occasionally drive under a “severe” condition, you should follow the Normal Conditions Maintenance Schedule. For severe driving conditions, specified in the Severe Conditions Maintenance Schedule do not apply.

**U.S. Owners**

Follow the Normal Conditions Maintenance Schedule if the severe driving conditions specified in the Severe Conditions Maintenance Schedule do not apply.

**Canadian Owners**

Follow the Maintenance Schedule for Severe Conditions.

- Lubricate all hinges, locks and latches
- Rotate tires (Check tire inflation and condition at least once per month)

#### U.S. Owners

Follow the Severe Conditions Maintenance Schedule if you drive your vehicle **MAINLY** under one or more of the following conditions:

- Driving less than 5 miles (8 km) per trip or, in freezing temperatures, driving less than 10 miles (16 km) per trip.
- Driving in extremely hot [over 90°F (32°C)] conditions.
- Extensive idling or long periods of stop-and-go driving, such as a taxi or a commercial delivery vehicle.
- Trailer towing, driving with a roof rack, or driving in mountainous conditions.
- Driving on muddy, dusty, or de-iced roads.

#### Canadian Owners

Follow the Maintenance Schedule for Severe Conditions.

1. Refer to page 323 for replacement information under special driving conditions.
2. Refer to page 322 for replacement information under special driving conditions.

</table>
You should check the following items at the specified intervals. If you are unsure of how to perform any check, turn to the page given.

- **Engine oil level** — Check every time you fill the fuel tank. See page 248.
- **Engine coolant level** — Check the radiator reserve tank every time you fill the fuel tank. See page 249.
- **Windshield washer fluid** — Check the level in the reservoir monthly. If weather conditions cause you to use the washers frequently, check the reservoir each time you stop for fuel. See page 306.
- **Automatic transmission** — Check the fluid level monthly. See page 307.
- **Brakes** — Check the fluid level monthly. See page 309.
- **Tires** — Check the tire pressure monthly. Examine the tread for wear and foreign objects. See page 323.
- **Lights** — Check the operation of the headlights, parking lights, taillights, high-mount brake light, turn signals, brake lights, and license plate light monthly. See page 330.
Fluid Locations

ENGINE OIL DIPSTICK (Orange loop)
WASHER FLUID (Blue cap)
ENGINE COOLANT RESERVOIR
POWER STEERING FLUID (Red cap)
RADIATOR CAP
ENGINE OIL FILL CAP

AUTOMATIC TRANSMISSION FLUID DIPSTICK (Yellow loop)
BRAKE FLUID (Gray cap)
Adding Oil

To add oil, unscrew and remove the engine oil fill cap on top of the valve cover. Pour in the oil, and install the engine oil fill cap. Tighten it securely. Wait a few minutes and recheck the oil level. Do not fill above the upper mark; you could damage the engine.

Pour the oil slowly and carefully so you do not spill. Clean up any spills immediately. Spilled oil could damage components in the engine compartment.

Recommended Oil

Oil is a major contributor to your engine’s performance and longevity. Always use a premium-grade 5W-20 detergent oil displaying the API Certification Seal. This seal indicates the oil is energy conserving, and that it meets the American Petroleum Institute's latest requirements.

Honda Motor Oil is the preferred 5W-20 lubricant for your vehicle. It is highly recommended that you use genuine Honda Motor Oil in your vehicle for optimum engine protection.

CONTINUED
You may use a synthetic motor oil if it meets the same requirements given for a conventional motor oil: it displays the API Certification Seal, and it is the proper weight as shown on the chart. When using synthetic oil, you must follow the oil and filter change intervals given in the maintenance schedule.

The oil's viscosity or weight is provided on the container's label. Select the oil for your vehicle according to this chart.

5W-20 oil is formulated for year-round protection of your Honda, to improve cold weather starting, and to help your engine use less fuel.

Make sure the API Certification Seal says “For Gasoline Engines.”

**Synthetic Oil**

You may use a synthetic motor oil if it meets the same requirements given for a conventional motor oil: it displays the API Certification Seal, and it is the proper weight as shown on the chart. When using synthetic oil, you must follow the oil and filter change intervals given in the maintenance schedule.

The oil's viscosity or weight is provided on the container's label. Select the oil for your vehicle according to this chart.

5W-20 oil is formulated for year-round protection of your Honda, to improve cold weather starting, and to help your engine use less fuel.

Make sure the API Certification Seal says “For Gasoline Engines.”
Additives
Your Honda does not require any oil additives. Additives may adversely affect your engine’s or transmission’s performance and durability.

Changing the Oil and Filter
Always change the oil and filter according to the time and distance (miles/kilometers) recommendations in the maintenance schedule. The oil and filter collect contaminants that can damage your engine if they are not removed regularly.

Changing the oil and filter requires special tools and access from underneath the vehicle. The vehicle should be raised on a service station-type hydraulic lift for this service. Unless you have the knowledge and proper equipment, you should have this maintenance done by a skilled mechanic.

1. Run the engine until it reaches normal operating temperature, then shut it off.

2. Open the hood and remove the engine oil fill cap. Remove the oil drain bolt and washer from the bottom of the engine. Drain the oil into an appropriate container.

CONTINUED
3. Remove the oil filter and let the remaining oil drain. A special wrench (available from your Honda dealer) is required to remove the filter.

4. Install a new oil filter according to instructions that come with it.

5. Put a new washer on the drain bolt, then reinstall the drain bolt. Tighten it to:
   29 lbf-ft (39 N·m, 4.0 kgf·m)

6. Refill the engine with the recommended oil.
   Engine oil change capacity (including filter):
   4.6 US qt (4.4 l, 3.9 Imp qt)

7. Replace the engine oil fill cap. Start the engine. The oil pressure indicator light should go out within five seconds. If it does not, turn off the engine and reinspect your work.

8. Let the engine run for several minutes, then check the drain bolt and oil filter for leaks.

9. Turn off the engine, let it sit for several minutes, then check the oil level. If necessary, add oil to bring the level to the upper mark on the dipstick.

**NOTICE**
Improper disposal of engine oil can be harmful to the environment. If you change your own oil, please dispose of the used oil properly. Put it in a sealed container and take it to a recycling center. Do not discard it in a trash bin or dump it on the ground.
Adding Engine Coolant

If the coolant level in the reserve tank is at or below the MIN line, add coolant to bring it up to the MAX line. Inspect the cooling system for leaks. The coolant you add should always be a mixture of 50 percent antifreeze and 50 percent water. Never add straight antifreeze or plain water.

Always use Honda All Season Antifreeze/Coolant Type 2. This coolant is pre-mixed with 50 percent antifreeze and 50 percent water. It does not require any additional mixing.

If it is not available, you may use another major-brand non-silicate coolant as a temporary replacement. Make sure it is a high-quality coolant recommended for aluminum engines. However, continued use of any non-Honda coolant can result in corrosion, causing the cooling system to malfunction or fail. Have the cooling system flushed and refilled with Honda antifreeze/coolant as soon as possible.

If the reserve tank is completely empty, you should also check the coolant level in the radiator.

**WARNING**

Removing the radiator cap while the engine is hot can cause the coolant to spray out, seriously scalding you.

Always let the engine and radiator cool down before removing the radiator cap.
1. Make sure the engine and radiator are cool.

2. Turn the radiator cap counterclockwise, without pressing down on it, until it stops. This relieves any pressure remaining in the cooling system.

3. Remove the radiator cap by pushing down and turning counterclockwise.

4. The coolant level should be up to the base of the filler neck. Add coolant if it is low.

   Pour the coolant slowly and carefully so you do not spill. Clean up any spills immediately. Spilled coolant could damage components in the engine compartment.

5. Put the radiator cap back on. Tighten it fully.

6. Pour coolant into the reserve tank. Fill it to halfway between the MAX and MIN marks. Put the cap back on the reserve tank.

Do not add any rust inhibitors or other additives to your vehicle’s cooling system. They may not be compatible with the coolant or engine components.
Replacing Engine Coolant
The cooling system should be completely drained and refilled with new coolant according to the time and distance recommendations in the maintenance schedule. Only use Honda All Season Antifreeze/Coolant Type 2.

Draining the coolant requires access to the underside of the vehicle. Unless you have the tools and knowledge, you should have this maintenance done by a skilled mechanic.

1. Turn the ignition ON (II). Turn the heater temperature control dial fully clockwise or set the climate control system to 90°F (32°C). Turn the ignition off. Open the hood. Make sure the engine and radiator are cool to the touch.

2. Remove the radiator cap.

3. Loosen the drain plug on the bottom of the radiator. The coolant will drain through the splash guard. Drain the coolant into an appropriate container.

CONTINUED
4. Install a rubber hose on the drain bolt in the back of the engine block. Loosen the drain bolt. Drain the coolant into an appropriate container.

5. Remove the reserve tank from its holder by pulling it straight up. Drain the coolant into an appropriate container, then put the tank back in its holder.

6. When the coolant stops draining, tighten the drain plug at the bottom of the radiator.

7. Tighten the drain bolt at the rear of the engine cylinder block securely.
Tightening torque: 
7 lbf-ft (10 N-m, 1.0 kgf-m)
8. Pour Honda All Season Antifreeze/Coolant Type 2 into the radiator up to the base of the filler neck. This coolant is a mixture of 50 percent antifreeze and 50 percent water. Pre-mixing is not required.

The cooling system capacity is:
1.98 US gal (7.5 L, 1.65 Imp gal)

9. Fill the reserve tank to the MAX mark. Install the reserve tank cap.

10. Install the radiator cap, and tighten it to the first stop.

11. Start the engine and let it run until the radiator cooling fan comes on at least twice. Then stop the engine.

12. Remove the radiator cap. Fill the radiator with coolant up to the base of the filler neck.

13. Install the radiator cap, and tighten it fully.
Check the level in the windshield washer reservoir at least monthly during normal use. In bad weather, when you use the washers often, check the level every time you stop for fuel. This reservoir supplies the windshield and rear window washers.

The windshield washer reservoir is located behind the passenger’s side headlight. Check the reservoir’s fluid level by removing the cap and looking at the level gauge attached to the cap.

On Canadian models
The low washer level indicator will light when the level is low (see page 77).

Fill the reservoir with a good-quality windshield washer fluid. This increases the cleaning capability and prevents freezing in cold weather.

When you refill the reservoir, clean the edges of the windshield wiper blades with windshield washer fluid on a clean cloth. This will help to condition the blade edges.

**NOTICE**

Do not use engine antifreeze or a vinegar/water solution in the windshield washer reservoir.

Antifreeze can damage your vehicle’s paint, while a vinegar/water solution can damage the windshield washer pump.

Use only commercially-available windshield washer fluid.
Check the fluid level with the engine at normal operating temperature.

1. Park the vehicle on level ground. Shut off the engine.

2. Remove the dipstick (yellow loop) from the transmission and wipe it with a clean cloth.

3. Insert the dipstick all the way into the transmission as shown.

4. Remove the dipstick and check the fluid level. It should be between the upper and lower marks.

CONTINUED
To thoroughly flush the transmission, the technician should drain and refill it with Honda ATF-Z1, then drive the vehicle a short distance. Do this three times. Then drain and refill the transmission a final time.

6. Insert the dipstick all the way back into the transmission securely as shown in the illustration.

The transmission should be drained and refilled with new fluid according to the time and distance recommendations in the maintenance schedule.

If you are not sure how to add fluid, contact your Honda dealer.

5. If the level is below the lower mark, remove the fill plug and add fluid to bring it to the upper mark.

Pour the fluid slowly and carefully so you do not spill. Clean up any spills immediately. Spilled fluid could damage components in the engine compartment.

Always use Honda ATF-Z1 (Automatic Transmission Fluid). If it is not available, you may use a DEXRON® III automatic transmission fluid as a temporary replacement. However, continued use can affect shift quality. Have the transmission flushed and refilled with Honda ATF-Z1 as soon as it is convenient.
Check the fluid level in the brake fluid reservoir monthly.

The brake fluid should be replaced according to the time recommendation in the maintenance schedule.

Always use Honda Heavy Duty Brake Fluid DOT 3. If it is not available, you should use only DOT 3 or DOT 4 fluid, from a sealed container, as a temporary replacement. However, the use of any non-Honda brake fluid can cause corrosion and decrease the life of the system. Have the brake system flushed and refilled with Honda Heavy Duty Brake Fluid DOT 3 as soon as possible.

Pour the fluid slowly and carefully so you do not spill. Clean up any spills immediately. Spilled fluid could damage components in the engine compartment.

Brake fluid marked DOT 5 is not compatible with your vehicle’s braking system and can cause extensive damage.

The fluid level should be between the MIN and MAX marks on the side of the reservoir. If the level is at or below the MIN mark, your brake system needs attention. Have the brake system inspected for leaks or worn brake pads.
Always use Honda Power Steering Fluid. If it is not available, you may use another power steering fluid as an emergency replacement. However, continued use can cause increased wear and poor steering in cold weather. Have the power steering system flushed and refilled with Honda PSF as soon as possible.

A low power steering fluid level can indicate a leak in the system. Check the fluid level frequently and have the system inspected as soon as possible.

Pour the fluid slowly and carefully so you do not spill. Clean up any spills immediately. Spilled fluid could damage components in the engine compartment.

**NOTICE**

Turning the steering wheel to full left or right lock and holding it there can damage the power steering pump.
The air cleaner element should be replaced according to the time and distance recommendations in the maintenance schedule.

**Replacement**

1. Remove the two pins holding the air intake cover by pulling the head on each pin. Remove the air intake cover.

2. Loosen the four bolts by using a Phillips-head screwdriver.

The air cleaner element is inside the air cleaner housing on the driver’s side of the engine compartment. To replace it:

CONTINUED
3. Remove the air cleaner housing cover.

4. Remove the old air cleaner element.

5. Carefully clean the inside of the air cleaner housing with a damp rag.

The coolant lines inside the air cleaner housing may be warm.

6. Place the new air cleaner element in the air cleaner housing.

7. Reinstall the air cleaner housing cover, and tighten the four bolts.

8. Reinstall the air intake cover. Reinstall the two pins and secure them by pushing on the heads until they lock.
The spark plugs in your vehicle are a special platinum-tipped design for longer life. The spark plugs should be replaced according to the time and distance recommendations in the maintenance schedule.

Clean the hood latch assembly with a mild cleaner, then lubricate it with a multipurpose grease. Lubricate all the moving parts (as shown), including the pivot. Follow the time and distance recommendations in the Maintenance Schedule. If you are not sure how to clean and grease the latch, contact your Honda dealer.

1. Loosen the four bolts with a wrench, then remove the engine cover.
2. Loosen the two holding clips by turning the heads one-quarter turn counterclockwise with a flat-tipped screwdriver. Remove the cover on the front cylinder bank by pulling it straight up.

3. Clean off any dirt and oil that have collected around the ignition coils.

4. Disconnect the wire connector from the ignition coil by pushing on the lock tab and pulling on the connector. Pull on the plastic connector, not the wires.

5. Use a wrench to remove the hexagon socket head cap bolt holding the ignition coil. Remove the ignition coil by pulling it straight out.

6. Remove the spark plug with a five-eighths inch (16 mm) spark plug socket.
7. Put the new spark plug into the socket, then screw it into the hole. Screw it in by hand so you do not crossthread it.

8. Torque the spark plug. (If you do not have a torque wrench, tighten the spark plug two-thirds of a turn after it contacts the cylinder head.)

Tightening torque: 13 lbf·ft (18 N·m, 1.8 kgf·m)

NOTICE

Tighten the spark plugs carefully. A spark plug that is too loose can overheat and damage the engine. Overtightening can cause damage to the threads in the cylinder head.
9. Install the ignition coil. Reinstall the hexagon socket head cap bolt.

10. Push the wire connector onto the ignition coil. Make sure it locks in place.

11. Repeat this procedure for the other five spark plugs.

12. Reinstall the cover on the front cylinder bank while putting its mounting clip in the hole on the passenger's side. Secure the cover by turning the heads of the two holding clips one-quarter turn clockwise with a flat-tipped screwdriver.

13. Reinstall the engine cover and tighten the four bolts securely.

Spark Plug Gap: 0.04 in (1.1 mm) \(\pm 0.01\ mm\)
Check the condition of your vehicle’s battery monthly. You should check the color of the test indicator window, and for corrosion on the terminals.

Check the battery terminals for corrosion (a white or yellowish powder). To remove it, cover the terminals with a solution of baking soda and water. It will bubble up and turn brown. When this stops, wash it off with plain water. Dry off the battery with a cloth or paper towel. Coat the terminals with grease to help prevent future corrosion.

**WARNING:** Battery posts, terminals, and related accessories contain lead and lead compounds. **Wash hands after handling.**

If the terminals are severely corroded, clean them with baking soda and water. Then use a wrench to loosen and remove the cables from the terminals. Always disconnect the negative (−) cable first and reconnect it last. Clean the battery terminals with a terminal cleaning tool or wire brush. Reconnect and tighten the cables, then coat the terminals with grease.

**CONTINUED**
If you need to connect the battery to a charger, disconnect both cables to prevent damage to the vehicle’s electrical system.

**WARNING**

The battery gives off explosive hydrogen gas during normal operation.

A spark or flame can cause the battery to explode with enough force to kill or seriously hurt you.

Wear protective clothing and a face shield, or have a skilled mechanic do the battery maintenance.

**NOTICE**

Charging the battery with the cables connected can seriously damage your vehicle’s electronic controls. Detach the battery cables before connecting the battery to a charger.

If your vehicle’s battery is disconnected or goes dead, the AUTO feature of the driver’s window will be disabled. You should reset the AUTO feature (see page 126).
Check the condition of the wiper blades at least every six months. Look for signs of cracking in the rubber, or areas that are getting hard. Replace the blades if you find these signs, or if they leave streaks and unwiped areas when used.

To replace a wiper blade:

1. Raise the wiper arm off the windshield.
   Front windshield: Raise the driver’s side first, then the passenger’s side.

   **NOTICE**

   Do not open the hood when the wiper arms are raised, or you will damage the hood and the arms.

2. Disconnect the blade assembly from the wiper arm by pushing in the lock tab. Hold the lock tab in while you push the blade assembly toward the base of the arm.
3. Remove the blade from its holder by grasping the tabbed end of the blade. Pull firmly until the tabs come out of the holder.

4. Examine the new wiper blades. If they have no plastic or metal reinforcement along the back edge, remove the metal reinforcement strips from the old wiper blade and install them in the slots along the edge of the new blade.

5. Slide the new wiper blade into the holder until the tabs lock.

6. Slide the wiper blade assembly onto the wiper arm. Make sure it locks in place.

7. Lower the wiper arm down against the windshield. Front windshield: Lower the passenger’s side first, then the driver’s side.
Your vehicle’s air conditioning is a sealed system. Any major maintenance, such as recharging, should be done by a qualified mechanic. You can do a couple of things to make sure the air conditioning works efficiently.

Periodically check the engine’s radiator and air conditioning condenser for leaves, insects, and dirt stuck to the front surface. These block the air flow and reduce cooling efficiency. Use a light spray from a hose or a soft brush to remove them.

**NOTICE**

The condenser and radiator fins bend easily. Only use a low-pressure spray or soft-bristle brush to clean them.

Run the air conditioning at least once a week during the cold weather months. Run it for at least ten minutes while you are driving at a steady speed with the engine at normal operating temperature. This circulates the lubricating oil contained in the refrigerant.

If the air conditioning does not get as cold as before, have your dealer check the system. Recharge the system with Refrigerant HFC-134a (R-134a). (See Specifications on page 386.)

**NOTICE**

Whenever you have the air conditioning system serviced, make sure the service facility uses a refrigerant recycling system. This system captures the refrigerant for reuse. Releasing refrigerant into the atmosphere can damage the environment.
Check the condition of the two drive belts (power steering belt and alternator belt). Examine the edges of each belt for cracks or fraying.

Check the tension of the power steering belt by pushing on it with your thumb midway between the pulleys.

The belt should have the following “play” or deflection.

Power steering belt: 0.51 – 0.65 in (13.0 – 16.5 mm)

If you see signs of wear or looseness, have your dealer adjust or replace the belts.
Timing Belt
The timing belt should normally be replaced at the intervals shown in the maintenance schedule. Replace the belt at 60,000 miles (U.S.) or 100,000 km (Canada) if you regularly drive your vehicle in one or more of these conditions:
- In very high temperatures (over 110°F, 43°C).
- In very low temperatures (under −20°F, −29°C).

Tires
To safely operate your vehicle, your tires must be the proper type and size, in good condition with adequate tread, and correctly inflated. The following pages give more detailed information on how and when to check air pressure, how to inspect your tires for damage and wear, and what to do when your tires need to be replaced.

**WARNING**
Using tires that are excessively worn or improperly inflated can cause a crash in which you can be seriously hurt or killed.

Follow all instructions in this owner's manual regarding tire inflation and maintenance.

Inflation
Keeping the tires properly inflated provides the best combination of handling, tread life, and riding comfort. Underinflated tires wear unevenly, adversely affect handling and fuel economy, and are more likely to fail from being overheated. Overinflated tires can make your vehicle ride more harshly, are more prone to damage from road hazards, and wear unevenly.

We recommend that you visually check your tires every day. If you think a tire might be low, check it immediately with a tire gauge.

CONTINUED
Use a gauge to measure the air pressure at least once a month. Even tires that are in good condition may lose one to two psi (10 to 20 kPa, 0.1 to 0.2 kgf/cm²) per month. Remember to check the spare tire at the same time you check all the other tires.

Check the pressure in the tires when they are cold. This means the vehicle has been parked for at least three hours. If you have to drive the vehicle before checking the tire pressure, the tires can still be considered “cold” if you drive less than 1 mile (1.6 km).

If you check the pressure when the tires are hot (the vehicle has been driven several miles), you will see readings 4 to 6 psi (30 to 40 kPa, 0.3 to 0.4 kgf/cm²) higher than the cold reading. This is normal. Do not let air out to match the specified cold pressure. The tire will be underinflated.

You should get your own tire pressure gauge and use it whenever you check your tire pressures. This will make it easier for you to tell if a pressure loss is due to a tire problem and not due to a variation between gauges.

Recommended Tire Pressures for Normal Driving
The following chart shows the recommended cold tire pressures for most normal driving conditions and speeds. Tire pressures for high speed driving are the same as for normal driving.

<table>
<thead>
<tr>
<th>Tire Size</th>
<th>Cold Tire Pressure for Normal Driving</th>
</tr>
</thead>
<tbody>
<tr>
<td>225/60R16 98T</td>
<td>36 psi (250 kPa, 2.5 kgf/cm²)</td>
</tr>
</tbody>
</table>

The compact spare tire pressure is: 60 psi (420 kPa, 4.2 kgf/cm²)
Your vehicle's tires have wear indicators molded into the tread. When the tread wears down to that point, you will see a 1/2 inch (12.7 mm) wide band running across the tread. This shows there is less than 1/16 inch (1.6 mm) of tread left on the tire. A tire that is this worn gives very little traction on wet roads. You should replace the tire if you can see the tread wear indicator in three or more places around the tire.

**Inspection**
Every time you check inflation, you should also examine the tires for damage, foreign objects, and wear. You should look for:

- Bumps or bulges in the tread or side of the tire. Replace the tire if you find either of these conditions.
- Cuts, splits, or cracks in the side of the tire. Replace the tire if you can see fabric or cord.
- Excessive tread wear.

These pressures are also given on the tire information label on the driver's doorjamb.

Tubeless tires have some ability to self-seal if they are punctured. However, because leakage is often very slow, you should look closely for punctures if a tire starts losing pressure.

Your vehicle's tires have wear indicators molded into the tread. When the tread wears down to that point, you will see a 1/2 inch (12.7 mm) wide band running across the tread. This shows there is less than 1/16 inch (1.6 mm) of tread left on the tire. A tire that is this worn gives very little traction on wet roads. You should replace the tire if you can see the tread wear indicator in three or more places around the tire.
To help increase tire life and distribute wear more evenly, you should have the tires rotated every 7,500 miles (12,000 km). Move the tires to the positions shown in the chart each time they are rotated.

**Maintenance**

In addition to proper inflation, correct wheel alignment helps to decrease tire wear. If you find a tire is worn unevenly, have your dealer check the wheel alignment.

The tires were properly balanced by the factory. They may need to be rebalanced at some time before they are worn out. Have your dealer check the tires if you feel a consistent vibration while driving. A tire should always be rebalanced if it is removed from the wheel for repair.

Make sure the installer balances the wheels when you have new tires installed. This increases riding comfort and tire life. Your vehicle’s original tires were dynamic or “spin” balanced at the factory. For best results, have the installer perform a dynamic balance.

**NOTICE**

On some models Improper wheel weights can damage your vehicle’s aluminum wheels. Use only genuine Honda wheel weights for balancing.

**Tire Rotation**

To help increase tire life and distribute wear more evenly, you should have the tires rotated every 7,500 miles (12,000 km). Move the tires to the positions shown in the chart each time they are rotated.
It is best to replace all four tires at the same time. If that is not possible or necessary, then replace the two front tires or the two rear tires as a pair. Replacing just one tire can seriously affect your vehicle's handling.

When shopping for replacement tires, you may find that some tires are “directional.” This means they are designed to rotate only in one direction. If you use directional tires, they should be rotated only front-to-back.

Replacing Tires and Wheels
The tires that came with your vehicle were selected to match the performance capabilities of the vehicle while providing the best combination of handling, ride comfort, and long life. You should replace them with radial tires of the same size, load range, speed rating, and maximum cold tire pressure rating (as shown on the tire’s sidewall). Mixing radial and bias-ply tires on your vehicle can reduce its braking ability, traction, and steering accuracy.

⚠️ WARNING
Installing improper tires on your vehicle can affect handling and stability. This can cause a crash in which you can be seriously hurt or killed.

Always use the size and type of tires recommended in this owner's manual.

CONTINUED
The ABS works by comparing the speed of the wheels. When replacing tires, use the same size originally supplied with the vehicle. Tire size and construction can affect wheel speed and may cause the system to work inconsistently.

If you ever need to replace a wheel, make sure the wheel's specifications match those of the original wheel that came on your vehicle. Replacement wheels are available at your Honda dealer.

### Wheels and Tires

**Wheel:**

16 x 6 1/2 JJ

**Tire:**

225/60R16 98T

See page 388 for information about DOT Tire Quality Grading.

### Winter Driving

Tires that are marked “M+S” or “All Season” on the sidewall have an all-weather tread design. They should be suitable for most winter driving conditions. Tires without these markings are designed for optimum traction in dry conditions. They may not provide adequate performance in winter driving. For the best performance in snowy or icy conditions, you should install snow tires or tire chains. They may be required by local laws under certain conditions.
Snow Tires
If you mount snow tires on your Honda, make sure they are radial tires of the same size and load range as the original tires. Mount snow tires on all four wheels to balance your vehicle's handling in all weather conditions. Keep in mind the traction provided by snow tires on dry roads may not be as high as your vehicle's original equipment tires. You should drive cautiously even when the roads are clear. Check with the tire dealer for maximum speed recommendations.

Tire Chains
Because your Honda has limited tire clearance, mount only SAE Class “S” cable-type traction devices on the front tires. Use traction devices only when required by driving conditions or local laws. Make sure they are the correct size for your tires.

Metal link-type “chains” should not be used. No matter how tight they seem to be installed, they can come into contact with the body and suspension, causing serious damage.

When installing cables, follow the manufacturer’s instructions and mount them as tightly as you can. Drive slowly with them installed. If you hear them coming in contact with the body or chassis, stop and investigate. Make sure the cables are installed tightly, and that they are not contacting the brake lines or suspension. Remove them as soon as you begin driving on cleared roads.

NOTICE
Traction devices that are the wrong size or improperly installed can damage your vehicle’s brake lines, suspension, body, and wheels. Stop driving if they are hitting any part of the vehicle.
Check the operation of your vehicle’s exterior lights at least once a month. A burned out bulb can create an unsafe condition by reducing your vehicle’s visibility and the ability to signal your intentions to other drivers.
Check the following:

- Headlights (low and high beam)
- Parking lights
- Taillights
- Brake lights
- High-mount brake light
- Turn signals
- Back-up lights
- Hazard light function
- License plate light
- Side marker lights
- Daytime running lights
  (Canadian models)

If you find any bulbs are burned out, replace them as soon as possible. Refer to the chart on page 387 to determine what type of replacement bulb is needed.
Headlight Aiming
The headlights were properly aimed when your vehicle was new. If you regularly carry heavy items in the cargo area or pull a trailer, readjustment may be required. Adjustment of the headlights should be performed by a Honda technician or other qualified mechanic.

Replacing a Headlight Bulb
Your vehicle has halogen headlight bulbs, one on each side. When replacing a bulb, handle it by its steel base and protect the glass from contact with your skin or hard objects. If you touch the glass, clean it with denatured alcohol and a clean cloth.

NOTICE
Halogen headlight bulbs get very hot when lit. Oil, perspiration, or a scratch on the glass can cause the bulb to overheat and shatter.

1. Open the hood.

If you need to change the headlight bulb on the driver's side, remove the air intake cover (see page 311).

2. Remove the electrical connector from the bulb by pulling the connector straight back.

3. Remove the rubber weather seal by pulling on the tab.

4. Unclip the end of the hold-down wire from its slot. Pivot it out of the way and remove the bulb.
5. Insert the new bulb into the hole, making sure the tabs are in their slots. Pivot the hold-down wire back in place and clip the end into the slot.

6. Install the rubber seal over the back of the headlight assembly. Make sure it is right side up; it is marked “TOP.”

7. Push the electrical connector onto the new bulb. Make sure it is connected securely. Turn on the headlights to test the new bulb.

8. (Driver’s side) Reinstall the air intake cover.

**Replacing the Front Side Marker/Turn Signal and Parking Light Bulb**

1. If you are changing the bulb on the driver’s side, start the engine, turn the steering wheel all the way to the right, and turn off the engine. If you are changing the bulb on the passenger’s side, turn the steering wheel to the left.

2. Use a flat-tipped screwdriver to remove the two holding clips from the inner fender.

3. Pull the inner fender cover away from the fender and bumper.

CONTINUED
4. Remove the socket from the headlight assembly by turning it one-quarter turn counterclockwise.

5. Remove the burned out bulb from the socket by pushing it in and turning the bulb counterclockwise until it unlocks.

6. Install the new bulb in the socket. Turn it clockwise to lock it in place.

7. Insert the socket back into the headlight assembly. Turn it clockwise to lock it in place.

8. Turn on the lights to make sure the new bulb is working.

9. Put the inner fender in place. Install the two holding clips. Lock each clip in place by pushing on the center.

---

**Replacing Rear Bulbs (in Fenders)**

1. Open the tailgate. Release the covers by inserting a flat-tip screwdriver into the slot until the cover bows slightly. Then pivot the screwdriver 90° and pull it straight out of the slot.

2. Use a Phillips-head screwdriver to remove the taillight assembly mounting screw under each cover.

3. Pull the taillight assembly out of the body by sliding it backward.

4. Determine which of the two bulbs is burned out: stop/taillight/side marker light or turn signal light.
5. Remove the socket by turning it one-quarter turn counterclockwise.

6. Pull the bulb straight out of its socket. Push the new bulb straight into the socket until it bottoms.

7. Reinstall the socket into the light assembly by turning it clockwise until it locks.

8. Turn on the lights to make sure the new bulb is working.

9. When reinstalling the taillight assembly, align and pop the snap fasteners in place. Tighten the two mounting screws and reinstall the covers in place.

**Replacing Rear Bulbs (in Tailgate)**

1. Open the tailgate. Place a cloth on the edge of the taillight cover. Remove it by carefully prying in the notch on its edge with a small flat-tipped screwdriver.

2. Determine which of the two bulbs is burned out: taillight or back-up light.

3. Remove the socket by turning it one-quarter turn counterclockwise.

CONTINUED
4. Pull the bulb straight out of its socket. Push the new bulb straight into the socket until it bottoms.

5. Insert the socket back into the light assembly. Turn it clockwise to lock it in place.

6. Turn on the lights to make sure the new bulb is working.

7. Reinstall the taillight cover.

### Replacing a High-mount Brake Light Bulb

1. Place a cloth on the edge of the lens segment on the passenger's side. Remove that lens segment by carefully prying on its edge with a small flat-tipped screwdriver.

2. Use a Phillips-head screwdriver to remove the screw under the lens.

3. Pull the light assembly out of the tailgate.

4. Remove the socket from the light assembly by turning it one-quarter turn counterclockwise.

5. Pull the bulb straight out of its socket. Push the new bulb straight into the socket until it bottoms.
6. Put the socket back into the light assembly and turn it clockwise to lock it in place.

7. Turn on the lights to make sure the new bulb is working.

8. Put the light assembly back into the tailgate. Install the screw and tighten it securely. Reinstall the lens segment.

**Replacing a Rear License Plate Bulb**

1. Remove the license light assembly by carefully prying on the left edge of the lens with a flat-tip screwdriver and pulling the assembly out.

2. Remove the lens from the bulb holder by pulling the lens while squeezing the tabs on both sides of the holder.

3. Pull the bulb straight out of its socket. Push the new bulb in until it bottoms in the socket.

**CONTINUED**
4. Turn on the parking lights and check that the new bulb is working.

5. Put the lens back on the bulb holder and push it until it latches.

6. Slide the left side of the light assembly into the hole. Push on the right side to latch the assembly into place.

Replacing Bulbs in the Interior Lights
The individual map lights, cargo area light, and the vanity mirror lights come apart the same way. They do not all use the same type of bulbs.

1. Remove the lens by carefully prying on the edge of the lens with a fingernail file or a small flat-tip screwdriver. Do not pry on the edge of the housing around the lens.
Front individual map light:
Pry on the front edge in front of both map lights.

Rear individual map light:
Pry on the middle edge of the lens near the vent.

Cargo area light:
Pry on the rear edge to the left and right of center.

2. Remove the bulb by pulling it straight out of its metal tabs.

3. Push the new bulb into the metal tabs. Snap the lens back in place.

CONTINUED
Storing Your Vehicle

If you need to park your vehicle for an extended period (more than one month), there are several things you should do to prepare it for storage. Proper preparation helps prevent deterioration and makes it easier to get your vehicle back on the road. If possible, store your vehicle indoors.

- Fill the fuel tank.
- Change the engine oil and filter (see page 299).
- Wash and dry the exterior completely.
- Clean the interior. Make sure the carpeting, floor mats, etc. are completely dry.
- Leave the parking brake off. Put the transmission in Park.
- Block the rear wheels.
- If the vehicle is to be stored for a longer period, it should be supported on jackstands so the tires are off the ground.
- Leave one window open slightly (if the vehicle is being stored indoors).
- Disconnect the battery.
- Support the front and rear wiper blade arms with a folded towel or rag so they do not touch the windshield.
- To minimize sticking, apply a silicone spray lubricant to all door and tailgate seals. Also, apply a vehicle body wax to the painted surfaces that mate with the door and tailgate seals.
- Cover the vehicle with a “breathable” cover, one made from a porous material such as cotton. Nonporous materials, such as plastic sheeting, trap moisture, which can damage the paint.
- If possible, run the engine for a while periodically (preferably once a month).

If you store your vehicle for 12 months or longer, have your Honda dealer perform the inspections called for in the 24 months/30,000 miles (48,000 km) maintenance schedule (Normal Conditions) as soon as you take it out of storage (see page 288). The replacements called for in the maintenance schedule are not needed unless the vehicle has actually reached that time or milestone.
Regular cleaning and polishing of your Honda helps to keep it “new” looking. This section gives you information on how to clean your vehicle and preserve its appearance: the paint, brightwork, wheels and interior. Also included are several things you can do to help prevent corrosion.

Exterior Care............................. 344
Washing.................................... 344
Waxing..................................... 345
Aluminum Wheels....................... 345
Paint Touch-up........................... 345
Interior Care.............................. 346

Seat Belts................................. 347
Windows................................. 348
Air Fresheners............................ 348
Corrosion Protection.................... 349
Body Repairs.............................. 350
Frequent washing helps preserve your vehicle’s beauty. Dirt and grit can scratch the paint, while tree sap and bird droppings can permanently ruin the finish.

Wash your vehicle in a shady area, not in direct sunlight. If the vehicle is parked in the sun, move it into the shade and let the exterior cool down before you start.

Only use the solvents and cleaners recommended in this Owner’s Manual.

**NOTICE**

Chemical solvents and strong cleaners can damage the paint, metal, and plastic on your vehicle.

- Rinse the vehicle thoroughly with cool water to remove loose dirt.
- Fill a bucket with cool water. Mix in a mild detergent, such as dishwashing liquid or a product made especially for car washing.
- Wash the vehicle using the water and detergent solution and a soft-bristle brush, sponge, or soft cloth. Start at the top and work your way down. Rinse frequently.
- Check the body for road tar, tree sap, etc. Remove these stains with tar remover or turpentine. Rinse it off immediately so it does not harm the finish. Remember to re-wax these areas, even if the rest of the vehicle does not need waxing.
- When you have washed and rinsed the whole exterior, dry it with a chamois or soft towel. Letting it air-dry will cause dulling and water spots.
- Rinse the vehicle thoroughly with cool water to remove loose dirt.
- Fill a bucket with cool water. Mix in a mild detergent, such as dishwashing liquid or a product made especially for car washing.
- Wash the vehicle using the water and detergent solution and a soft-bristle brush, sponge, or soft cloth. Start at the top and work your way down. Rinse frequently.
- Check the body for road tar, tree sap, etc. Remove these stains with tar remover or turpentine. Rinse it off immediately so it does not harm the finish. Remember to re-wax these areas, even if the rest of the vehicle does not need waxing.
- When you have washed and rinsed the whole exterior, dry it with a chamois or soft towel. Letting it air-dry will cause dulling and water spots.

As you dry the vehicle, inspect it for chips and scratches that could allow corrosion to start. Repair them with touch-up paint (see page 345).

**NOTICE**

Your vehicle is equipped with an antenna on the front right fender. Before using a “drive-through” car wash, make sure you remove the antenna by unscrewing it by hand. This prevents the antenna from being damaged by the car wash brushes.
Waxing
Always wash and dry the whole vehicle before waxing it. You should wax your vehicle, including the metal trim, whenever water sits on the surface in large patches. It should form into beads or droplets after waxing.

You should use a quality liquid or paste wax. Apply it according to the instructions on the container. In general, there are two types of products:

Waxes — A wax coats the finish and protects it from damage by exposure to sunlight, air pollution, etc. You should use a wax on your Honda when it is new.

Polishes — Polishes and cleaner/waxes can restore the shine to paint that has oxidized and lost some of its shine. They normally contain mild abrasives and solvents that remove the top layer of the finish. You should use a polish on your Honda if the finish does not have its original shine after using a wax.

Cleaning tar, insects, etc. with removers also takes off the wax. Remember to re-wax those areas, even if the rest of the vehicle does not need waxing.

Aluminum Wheels
On some models
Clean your Honda's aluminum alloy wheels as you do the rest of the exterior. Wash them with the same solution, and rinse them thoroughly.

The wheels have a protective clear-coat that keeps the aluminum from corroding and tarnishing. Using harsh chemicals, including some commercial wheel cleaners, or stiff brushes can damage this clear-coat. Only use a mild detergent and soft brush or sponge to clean the wheels.

Paint Touch-up
Your dealer has touch-up paint to match your vehicle's color. The color code is printed on a sticker on the driver's doorjamb. Take this code to your dealer so you are sure to get the correct color.

Inspect your vehicle frequently for chips or scratches in the paint. Repair them right away to prevent corrosion of the metal underneath. Use the touch-up paint only on small chips and scratches. More extensive paint damage should be repaired by a professional.
Carpeting
Vacuum the carpeting frequently to remove dirt. Ground-in dirt will make the carpet wear out faster.
Periodically shampoo the carpet to keep it looking new. Use one of the foam-type carpet cleaners on the market. Follow the instructions that come with the cleaner, applying it with a sponge or soft brush. Keep the carpeting as dry as possible by not adding water to the foam.

Floor Mats

The Honda driver’s floor mat that came with your vehicle was designed to be hooked over the floor mat anchor. This keeps the floor mat from sliding forward and possibly interfering with the pedals.

If you remove the driver’s floor mat, make sure to re-anchor it when you put it back in your vehicle.

If you replace it, use a Honda floor mat that is designed to be used with the floor mat anchors in your vehicle.

If you use a non-Honda floor mat in the driver’s footwell, make sure it fits properly and that it can be used with the floor mat anchor.

Do not put additional floor mats on top of the anchored mat, otherwise the additional mats may slide forward and interfere with the pedals.

If you remove the driver’s floor mat, make sure to re-anchor it when you put it back in your vehicle.
**Fabric**
Vacuum dirt and dust out of the material frequently. For general cleaning, use a solution of mild soap and lukewarm water, letting it air dry. To clean off stubborn spots, use a commercially-available fabric cleaner. Test it on a hidden area of the fabric first, to make sure it does not bleach or stain the fabric. Follow the instructions that come with the cleaner.

**Vinyl**
Remove dirt and dust with a vacuum cleaner. Wipe the vinyl with a soft cloth dampened in a solution of mild soap and water. Use the same solution with a soft-bristle brush on more difficult spots. You can also use commercially-available spray or foam-type vinyl cleaners.

**Leather**
*On EX-L model*
Vacuum dirt and dust from the leather frequently. Pay particular attention to the pleats and seams. Clean the leather with a soft cloth dampened with clear water, then buff it with a clean, dry cloth. If further cleaning is needed, use a soap specifically for leather, such as saddle soap. Apply this soap with a damp, soft cloth. Wipe down and buff as described above.

**Seat Belts**
If your seat belts get dirty, you can use a soft brush with a mixture of mild soap and warm water to clean them. Do not use bleach, dye, or cleaning solvents. They can weaken the belt material. Let the belts air-dry before you use the vehicle.

CONTINUED
Dirt build-up in the loops of the seat belt anchors can cause the belts to retract slowly. Wipe the insides of the loops with a clean cloth dampened in mild soap and warm water or isopropyl alcohol.

**Windows**

Clean the windows, inside and out, with a commercially-available glass cleaner. You can also use a mixture of one part white vinegar to ten parts water. This will remove the haze that builds up on the inside of the windows. Use a soft cloth or paper towels to clean all glass and clear plastic surfaces.

**NOTICE**

The rear window defogger wires are bonded to the inside of the glass. Wiping vigorously up-and-down can dislodge and break the defogger wires. When cleaning the rear window, use gentle pressure and wipe side-to-side.

**Air Fresheners**

If you want to use an air freshener/deodorizer in the interior of your vehicle, it is best to use a solid type. Some liquid air fresheners contain chemicals that may cause parts of the interior trim and fabric to crack or discolor.

If you use a liquid air freshener, make sure you fasten it securely so it does not spill as you drive.
Two factors normally contribute to causing corrosion in your vehicle:

1. Moisture trapped in body cavities. Dirt and road salt that collects in hollows on the underside of the vehicle stays damp, promoting corrosion in that area.

2. Removal of paint and protective coatings from the exterior and underside of the vehicle.

Many corrosion-preventive measures are built into your Honda. You can help keep your vehicle from corroding by performing some simple periodic maintenance:

- Repair chips and scratches in the paint as soon as you discover them.
- Inspect and clean out the drain holes in the bottom of the doors and body.
- Check the floor coverings for dampness. Carpeting and floor mats may remain damp for a long time, especially in winter. This dampness can eventually cause the floor panels to corrode.
- Use a high-pressure spray to clean the underside of your vehicle. This is especially important in areas that use road salt in winter. It is also a good idea in humid climates and areas subject to salt air. Be careful of the ABS wheel sensors and wiring at each wheel.
- Have the corrosion-preventive coatings on the underside of your vehicle inspected and repaired periodically.
Body repairs can affect your vehicle’s resistance to corrosion. If your vehicle needs repairs after a collision, pay close attention to the parts used in the repair and the quality of the work.

Make sure the repair facility uses Honda replacement body parts. Some companies make sheet metal pieces that seem to duplicate the original Honda body parts, but are actually inferior in fit, finish, and corrosion resistance. Once installed, they do not give the same high-quality appearance.

When reporting your collision to the insurance company, tell them you want Honda parts used in the repair. Although most insurers recognize the quality of original parts, some may try to specify that the repairs be done with other available parts. You should investigate this before any repairs have begun.

Take your vehicle to your authorized Honda dealer for inspection after the repairs are completed. Your dealer can make sure that quality materials were used, and that corrosion-preventive coatings were applied to all repaired and replaced parts.
This section covers the more-common problems that motorists experience with their vehicles. It gives you information about how to safely evaluate the problem and what to do to correct it. If the problem has stranded you on the side of the road, you may be able to get going again. If not, you will also find instructions on getting your vehicle towed.

Your vehicle has a compact spare tire that takes up less space. Use this spare tire as a temporary replacement only. Get your regular tire repaired or replaced and put it back on your vehicle as soon as you can.

Check the inflation pressure of the compact spare tire every time you check the other tires. It should be inflated to: 60 psi (420 kPa, 4.2 kgf/cm²)

Follow these precautions whenever you are using the compact spare tire:

• Do not exceed 50 mph (80 km/h) under any circumstances.

• This tire gives a harsher ride and less traction on some road surfaces than the regular tire. Use greater caution while driving on this tire.

• Do not mount snow chains on the compact spare.

• Do not use the compact spare tire if you are towing a trailer.

• The wheel of the compact spare tire is designed especially to fit your vehicle. Do not use your spare tire on another vehicle unless it is the same make and model.

• Turn off the Traction Control System (see page 269). Driving with the compact spare tire may activate the TCS.

The compact spare tire has a shorter tread life than a regular tire. Replace it when you can see the tread wear indicator bars. The replacement should be the same size and design tire, mounted on the same wheel. The compact spare tire is not designed to be mounted on a regular wheel, and the compact wheel is not designed for mounting a regular tire.
If you have a flat tire while driving, stop in a safe place to change it. Stopping in traffic or on the shoulder of a busy road is dangerous. Drive slowly along the shoulder until you get to an exit or an area to stop that is far away from the traffic lanes.

**WARNING**

The vehicle can easily roll off the jack, seriously injuring anyone underneath.

Follow the directions for changing a tire exactly, and never get under the vehicle when it is supported only by the jack.

1. Park the vehicle on firm, level, and non-slippery ground away from traffic. Put the transmission in Park. Apply the parking brake. If you are towing a trailer, unhitch the trailer.

2. Turn on the hazard warning lights, and turn the ignition switch to LOCK (0). Have all the passengers get out of the vehicle while you change the tire.

CONTINUED
3. Open the tailgate. Remove the cargo net.

4. The tools and jack are behind a cover in the cargo area on the driver's side. Remove the cover by turning the handle counterclockwise, then pulling out the cover.

5. Take the tools out of the storage compartment.

6. Turn the jack's end bracket counterclockwise to loosen it, then remove the jack.

7. The spare tire is stored under the floor between the first and second row of seats. If the front seats are adjusted to the rear-most position, move the seats forward slightly and adjust the seat-backs to an upright position (see page 110).

Lift up the center table (see page 130).
8. Open either of the rear sliding doors. Pull the floor carpet up by lifting up on the edge, then raise the floor lid by pulling up on the handle. To keep the floor carpet and lid out of the way, pull out the hook on the back of the floor lid and attach it into the seat-back handle on the driver’s seat.

9. On EX and EX-L models
   Remove the spare tire basket.

10. Unscrew the wing bolt and take the spare tire out of its well. After you have removed the spare tire, screw this wing bolt back into place.

11. On EX and EX-L models
    If you are changing a rear tire, close the sliding door. Then turn off the sliding door MAIN switch.

12. Loosen the five wheel nuts 1/2 turn with the wheel wrench.

CONTINUED
13. Locate the jacking point nearest the tire you need to change. It is pointed to by a △ mark molded into the underside of the body. Place the jack under the jacking point. Turn the end bracket clockwise until the top of the jack contacts the jacking point. Make sure the jacking point tab is resting in the jack notch.

14. Use the extension and wheel wrench as shown to raise the vehicle until the flat tire is off the ground.

15. Remove the wheel nuts, then remove the flat tire. Temporarily place the flat tire on the ground with the outside surface of the wheel facing up. You could scratch the wheel if you put it face down.
On LX model
Do not attempt to forcibly pry the wheel cover off with a screwdriver or other tool. The wheel cover cannot be removed without first removing the wheel nuts.

16. Before mounting the spare tire, wipe any dirt off the mounting surface of the wheel and hub with a clean cloth. Wipe the hub carefully, it may be hot from driving.

17. Put on the spare tire. Put the wheel nuts back on finger-tight, then tighten them in a crisscross pattern with the wheel wrench until the wheel is firmly against the hub. Do not try to tighten them fully.

CONTINUED

Taking Care of the Unexpected 357
Tighten the wheel nuts securely in the same crisscross pattern. Have the wheel nut torque checked at the nearest automotive service facility. Tighten the wheel nuts to:

80 lb·ft (108 N·m, 11 kgf·m)

18. Lower the vehicle to the ground and remove the jack.

19. Tighten the wheel nuts securely in the same crisscross pattern. Have the wheel nut torque checked at the nearest automotive service facility. Tighten the wheel nuts to:

80 lb·ft (108 N·m, 11 kgf·m)

20. Put the flat tire in the supplied vinyl bag. This bag is stored in the rear compartment on the driver’s side panel in the third row. Knot the top of the vinyl bag.
21. Storing the flat tire behind the third seat
When the third seat is not folded, the flat tire is secured behind the third seat.

*On EX and EX-L models*
Turn on the sliding door MAIN switch so you can open the door.

22. You will find a u-shaped slit on the carpet behind the seat bottom of the third seat. Pull up the carpet at the slit and remove the plastic screw with a coin.

Remove the bracket and the wing bolt from the spare tire lid by unscrewing the bracket mounting bolt.

CONTINUED
Adjust the seat-back of the third seat to the upright position (see page 111). Install the bracket and the bracket mounting bolt to the attachment point as shown, and tighten the bolt. Make sure the bracket is securely locked.

23. Storing the Flat Tire on the Floor
When the third seat is folded, the flat tire is secured to the floor on top of the folded seat. Pull up the carpet on the attachment point and remove the plastic screw as described in the previous procedure.

Remove the wing bolt from the bracket that is attached to the spare tire lid.

Install the flat tire on the bracket with the inside of the wheel facing toward you. Put the tire mounting wing bolt in the attachment point through one of the five wheel nut holes and the bracket as shown. Poke holes in the vinyl bag. Secure the flat tire by tightening the wing bolt.
Changing a Flat Tire

24. Store the jack in its holder. Turn the jack’s end bracket clockwise to lock it in place. Store the tools. Replace the cover.

25. Close the tailgate.

26. Store the plastic screw in the spare tire well.

   On LX model
   Store the wheel cover in the spare tire well. Make sure it will not get scratched or damaged.

   On EX and EX-L models
   Store the spare tire basket in the spare tire well.

27. Unclip the hook from the seat back handle on the driver’s seat and lower the floor lid and the carpet.

   Make sure to adjust the front seats properly before you start driving (see page 110).

WARNING

Loose items can fly around the interior in a crash and could seriously injure the occupants.

Store the wheel, jack, and tools securely before driving.

Place the flat tire face down on the attachment point. Put the tire mounting wing bolt in the attachment point through one of the five wheel nut holes as shown. Poke holes in the vinyl bag. Secure the flat tire by tightening the wing bolt.
Diagnosing why your engine won't start falls into two areas, depending on what you hear when you turn the key to START (III):

- You hear nothing, or almost nothing. The engine's starter motor does not operate at all, or operates very slowly.

- You can hear the starter motor operating normally, or the starter motor sounds like it is spinning faster than normal, but the engine does not start up and run.

Nothing Happens or the Starter Motor Operates Very Slowly
When you turn the ignition switch to START (III), you do not hear the normal noise of the engine trying to start. You may hear a clicking sound or series of clicks, or nothing at all.

Check these things:

- Check the transmission interlock. The transmission must be in Park or Neutral or the starter will not operate.

- Turn the ignition switch to ON (II). Turn on the headlights and check their brightness. If the headlights are very dim or don’t light at all, the battery is discharged. See Jump Starting on page 364.

- Turn the ignition switch to START (III). If the headlights do not dim, check the condition of the fuses. If the fuses are OK, there is probably something wrong with the electrical circuit for the ignition switch or starter motor. You will need a qualified technician to determine the problem. (See Emergency Towing on page 380.)
If the headlights dim noticeably or go out when you try to start the engine, either the battery is discharged or the connections are corroded. Check the condition of the battery and terminal connections (see page 317). You can then try jump starting the vehicle from a booster battery (see page 364).

### The Starter Operates Normally
In this case, the starter motor’s speed sounds normal, or even faster than normal, when you turn the ignition switch to START (III), but the engine does not run.

- Your vehicle has the Immobilizer System. You should use a properly-coded master or valet key to start the engine (see page 90). A key that is not properly coded will cause the immobilizer system indicator in the dash panel to blink rapidly.

- Are you using the proper starting procedure? Refer to Starting the Engine on page 259.

- Do you have fuel? Turn the ignition switch to ON (II) for a minute and watch the fuel gauge. The low fuel level warning light may not be working, so you were not reminded to fill the tank.

- There may be an electrical problem, such as no power to the fuel pump. Check all the fuses (see page 374).

If you find nothing wrong, you will need a qualified technician to find the problem. See Emergency Towing on page 380.
Jump Starting

If your vehicle’s battery has run down, you may be able to start the engine by using a booster battery. Although this seems like a simple procedure, you should take several precautions.

You cannot start a Honda by pushing or pulling it.

To jump start your vehicle, follow these directions closely:

1. Open the hood and check the physical condition of the battery (see page 317). In very cold weather, check the condition of the electrolyte. If it seems slushy or like ice, do not try jump starting until it thaws.

2. Turn off all the electrical accessories: heater, A/C, climate control, stereo system, lights, etc.

    Put the transmission in Neutral or Park, and set the parking brake.

3. Connect one jumper cable to the positive (+) terminal on your Honda’s battery. Connect the other end to the positive (+) terminal on the booster battery.

A battery can explode if you do not follow the correct procedure, seriously injuring anyone nearby.

Keep all sparks, open flames, and smoking materials away from the battery.

If a battery sits in extreme cold, the electrolyte inside can freeze. Attempting to jump start with a frozen battery can cause it to rupture.

364  Taking Care of the Unexpected
4. Connect the second jumper cable to the negative (−) terminal on the booster battery. Connect the other end to the grounding strap as shown. Do not connect this jumper cable to any other part of the engine.

The numbers in the illustration show you the order to connect the jumper cables.

5. If the booster battery is in another vehicle, have an assistant start that vehicle and run it at a fast idle.

6. Start your vehicle. If the starter motor still operates slowly, check the jumper cable connections to make sure they have good metal-to-metal contact.

7. Once your vehicle is running, disconnect the negative cable from your vehicle, then from the booster battery. Disconnect the positive cable from your vehicle, then the booster battery.

Keep the ends of the jumper cables away from each other and any metal on the vehicle until all are disconnected. Otherwise, you may cause an electrical short.
Your vehicle can overheat for several reasons, such as lack of coolant or a mechanical problem. The only indication may be the temperature gauge climbing to or above the red mark. Or you may see steam or spray coming from under the hood. In either case, you should take immediate action.

1. Safely pull to the side of the road. Put the transmission in Neutral or Park and set the parking brake. Turn off the heating and cooling/climate control system and all other accessories. Turn on the hazard warning indicators.

2. If you see steam and/or spray coming from under the hood, turn off the engine.

Driving with the temperature gauge pointer at the red mark can cause serious damage to your engine.

**WARNING**

Steam and spray from an overheated engine can seriously scald you.

Do not open the hood if steam is coming out.
3. If you do not see steam or spray, leave the engine running and watch the temperature gauge. If the high heat is due to overloading (climbing a long, steep hill on a hot day with the A/C running, for example), the engine should start to cool down almost immediately. If it does, wait until the temperature gauge comes down to the midpoint then continue driving.

4. If the temperature gauge stays at the red mark, turn off the engine.

5. Wait until you see no more signs of steam or spray, then open the hood.

6. Look for any obvious coolant leaks, such as a split radiator hose. Everything is still extremely hot, so use caution. If you find a leak, it must be repaired before you continue driving (see Emergency Towing on page 380).

7. If you don’t find an obvious leak, check the coolant level in the radiator reserve tank (see page 249). If the level is below the MIN mark, add coolant to halfway between the MIN and MAX marks.

8. If there was no coolant in the reserve tank, you may also have to add coolant to the radiator. Let the engine cool down until the pointer reaches the middle of the temperature gauge, or lower, before checking the radiator.

**WARNING**

Removing the radiator cap while the engine is hot can cause the coolant to spray out, seriously scalding you.

Always let the engine and radiator cool down before removing the radiator cap.

CONTINUED
9. Using gloves or a large heavy cloth, turn the radiator cap counterclockwise, without pushing down, to the first stop. This releases any remaining pressure in the cooling system. After the pressure releases, push down on the cap and turn it until it comes off.

10. Start the engine and set the temperature control dial to maximum (climate control to FULL AUTO at 90°F/32°C). Add coolant to the radiator up to the base of the filler neck. If you do not have the proper coolant mixture available, you can add plain water. Remember to have the cooling system drained and refilled with the proper mixture as soon as you can.

11. Put the radiator cap back on tightly. Run the engine and watch the temperature gauge. If it goes back to the red mark, the engine needs repair. (See Emergency Towing on page 380.)

12. If the temperature stays normal, check the coolant level in the radiator reserve tank. If it has gone down, add coolant to the MAX mark. Put the cap back on tightly.
This indicator should light when the ignition switch is ON (II), and go out after the engine starts. It should never come on when the engine is running. If it starts flashing, it indicates that the oil pressure dropped very low for a moment, then recovered. If the indicator stays on with the engine running, it shows that the engine has lost oil pressure and serious engine damage is possible. In either case, you should take immediate action.

**NOTICE**

Running the engine with low oil pressure can cause serious mechanical damage almost immediately. Turn off the engine as soon as you can safely get the vehicle stopped.

1. Safely pull off the road and shut off the engine. Turn on the hazard warning indicators.

2. Let the vehicle sit for a minute. Open the hood and check the oil level (see page 248). Although oil level and oil pressure are not directly connected, an engine that is very low on oil can lose pressure during cornering and other driving maneuvers.

3. If necessary, add oil to bring the level back to the full mark on the dipstick (see page 297).

4. Start the engine and watch the oil pressure indicator. If the light does not go out within ten seconds, turn off the engine. There is a mechanical problem that needs to be repaired before you can continue driving. (See **Emergency Towing** on page 380.)
This indicator should come on when the ignition switch is ON (II), and go out after the engine starts. If it comes on brightly when the engine is running, it indicates that the charging system has stopped charging the battery.

Immediately turn off all electrical accessories: radio, heater, A/C, climate control, rear defogger, cruise control, etc. Try not to use other electrically-operated controls such as the power windows. Keep the engine running and take extra care not to stall it. Starting the engine will discharge the battery rapidly.

By eliminating as much of the electrical load as possible, you can drive several miles (kilometers) before the battery is too discharged to keep the engine running. Drive to a service station or garage where you can get technical assistance.
If the indicator remains on past three driving trips, or the fuel cap was not loose or missing, have the vehicle checked by the dealer as soon as possible. Drive moderately until the dealer has inspected the problem. Avoid full-throttle acceleration and driving at high speed.

If the indicator remains on past three driving trips, or the fuel cap was not loose or missing, the vehicle's emissions control systems may have a problem. Even though you may feel no difference in your vehicle's performance, it can reduce your fuel economy and cause your vehicle to put out excessive emissions. Continued operation may cause serious damage.

If you have recently refueled your vehicle, the cause of this indicator coming on could be a loose or missing fuel fill cap. Check the cap and tighten it until it clicks several times. Replace the fuel fill cap if it is missing. Tightening the cap will not make the indicator turn off immediately; it takes at least three driving trips.

This indicator may also come on along with the “D” indicator.

**NOTICE**
If you keep driving with the malfunction indicator lamp on, you can damage your vehicle's emissions controls and engine. Those repairs may not be covered by your vehicle's warranties.

This indicator may also come on along with the “D” indicator.
Readiness Codes
Your vehicle has certain “readiness codes” that are part of the on-board diagnostics for the emissions systems. In some states, part of the emissions testing is to make sure these codes are set. If they are not set, the test cannot be completed.

If your vehicle’s battery has been disconnected or gone dead, these codes are erased. It takes several days of driving under various conditions to set the codes again.

If possible, do not take your vehicle for a state emissions test until the readiness codes are set. Refer to State Emissions Testing for more information. (See page 395.)

To check if they are set, turn the ignition ON (II), but do not start the engine. The Malfunction Indicator Lamp will come on for 20 seconds. If it then goes off, the readiness codes are set. If it blinks 5 times, the readiness codes are not set.
However, if the brake pedal does not feel normal, you should take immediate action. Because of the brake system's dual-circuit design, a problem in one part of the system will still give you braking at two wheels. You will feel the brake pedal go down much farther before the vehicle begins to slow down, and you will have to press harder on the pedal. The distance needed to stop will be much longer.

If it comes on at any other time, it indicates a problem with the vehicle's brake system. In most cases, the problem is a low fluid level in the brake fluid reservoir. Press lightly on the brake pedal to see if it feels normal. If it does, check the brake fluid level the next time you stop at a service station (see page 309). If the fluid level is low, take the vehicle to your dealer and have the brake system inspected for leaks or worn brake pads.

The Brake System Indicator normally comes on when you turn the ignition switch ON (II). It is a reminder to check the parking brake. It comes on and stays lit if you do not fully release the parking brake.

Slow down by shifting to a lower gear, and pull to the side of the road when it is safe. Because of the longer distance needed to stop, it is hazardous to drive the vehicle. You should have it towed, and repaired as soon as possible. (See Emergency Towing on page 380.)

If you must drive the vehicle a short distance in this condition, drive slowly and cautiously.

If the ABS indicator and the TCS indicator come on with this indicator, have the vehicle inspected by your dealer immediately.

If it comes on at any other time, it indicates a problem with the vehicle's brake system. In most cases, the problem is a low fluid level in the brake fluid reservoir. Press lightly on the brake pedal to see if it feels normal. If it does, check the brake fluid level the next time you stop at a service station (see page 309). If the fluid level is low, take the vehicle to your dealer and have the brake system inspected for leaks or worn brake pads.

The Brake System Indicator normally comes on when you turn the ignition switch ON (II). It is a reminder to check the parking brake. It comes on and stays lit if you do not fully release the parking brake.

Slow down by shifting to a lower gear, and pull to the side of the road when it is safe. Because of the longer distance needed to stop, it is hazardous to drive the vehicle. You should have it towed, and repaired as soon as possible. (See Emergency Towing on page 380.)

If you must drive the vehicle a short distance in this condition, drive slowly and cautiously.

If the ABS indicator and the TCS indicator come on with this indicator, have the vehicle inspected by your dealer immediately.
All the electrical circuits in your vehicle have fuses to protect them from a short circuit or overload. These fuses are located in four fuse boxes.

The interior fuse boxes are located underneath the dashboard on each side.

To open the fuse box on the passenger’s side, pull the right edge of the cover.

The primary under-hood fuse box is located in the back of the engine compartment on the passenger’s side. To open it, push the tabs as shown.
Checking and Replacing Fuses
If something electrical in your vehicle stops working, the first thing you should check for is a blown fuse. Determine from the chart on page 377 to 379, or the diagram on the fuse box lid (the diagram for the driver’s side interior fuse box is on the kick panel below the fuse box), which fuse or fuses control that component. Check those fuses first, but check all the fuses before deciding that a blown fuse is not the cause. Replace any blown fuses and check the component’s operation.

1. Turn the ignition switch to LOCK (0). Make sure the headlights and all other accessories are off.

2. Remove the cover from the fuse box.

3. Check each of the large fuses in the primary under-hood fuse box by looking through the top at the wire inside. Removing these fuses requires a Phillips-head screwdriver.
4. Check the smaller fuses in the under-hood fuse box and all the fuses in the interior fuse boxes by pulling out each fuse with the fuse puller provided in the primary under-hood fuse box.

5. Look for a burned wire inside the fuse. If it is burned, replace it with one of the spare fuses of the same rating or lower.

If you cannot drive the vehicle without fixing the problem, and you do not have a spare fuse, take a fuse of the same rating or a lower rating from one of the other circuits. Make sure you can do without that circuit temporarily (such as the accessory power socket or radio).

If you replace the blown fuse with a spare fuse that has a lower rating, it might blow out again. This does not indicate anything wrong. Replace the fuse with one of the correct rating as soon as you can.

**NOTICE**

Replacing a fuse with one that has a higher rating greatly increases the chances of damaging the electrical system. If you do not have a replacement fuse with the proper rating for the circuit, install one with a lower rating.
6. If the replacement fuse of the same rating blows in a short time, there is probably a serious electrical problem in your vehicle. Leave the blown fuse in that circuit and have your vehicle checked by a qualified mechanic.

If the driver’s power window fuse is removed, the AUTO feature of the driver’s window will be disabled. You should reset the AUTO feature (see page 126).

*On EX and EX-L models*
If the radio fuse is removed, the audio system will disable itself. The next time you turn on the radio you will see “---” in the frequency display. Use the Preset buttons to enter the five-digit code (see page 200).

Taking Care of the Unexpected  379
Emergency Towing

If your vehicle needs to be towed, call a professional towing service or, if you belong to one, an organization that provides roadside assistance. Never tow your vehicle behind another vehicle with just a rope or chain. It is very dangerous.

There are three popular types of professional towing equipment.

**Flat-bed Equipment** — The operator loads your vehicle on the back of a truck. **This is the best way to transport your Honda.**

**Wheel-lift Equipment** — The tow truck uses two pivoting arms that go under the tires (front or rear) and lift them off the ground. The other two tires remain on the ground. **This is an acceptable way to tow your Honda.**

**Sling-type Equipment** — The tow truck uses metal cables with hooks on the ends. These hooks go around parts of the frame or suspension and the cables lift that end of the vehicle off the ground. Your vehicle’s suspension and body can be seriously damaged. **This method of towing is unacceptable.**

If your Honda cannot be transported by flat-bed, it should be towed by wheel-lift equipment with the front wheels off the ground. If, due to damage, your vehicle must be towed with the front wheels on the ground, do the following.

- Release the parking brake.
- Start the engine.
- Shift to D, then to N.
- Turn off the engine.

**NOTICE**

Improper towing preparation will damage the transmission. Follow the above procedure exactly. If you cannot shift the transmission or start the engine, your vehicle must be transported with the front wheels off the ground.

With the front wheels on the ground, it is best to tow the vehicle no farther than 50 miles (80 km), and keep the speed below 35 mph (55 km/h).
If you decide to tow your vehicle with all four wheels on the ground, make sure you use a properly-designed and attached tow bar. Prepare the vehicle for towing as described above, and leave the ignition switch in Accessory (I) so the steering wheel does not lock. Make sure the radio and any items plugged into the accessory power socket are turned off so they do not run down the battery.

**NOTICE**

The steering system can be damaged if the steering wheel is locked. Leave the ignition switch in Accessory (I), and make sure the steering wheel turns freely before you begin towing.

**NOTICE**

Trying to lift or tow your vehicle by the bumpers will cause serious damage. The bumpers are not designed to support the vehicle's weight.
The diagrams in this section give you the dimensions and capacities of your Honda, and the locations of the identification numbers. It also includes information you should know about your vehicle’s tires and emissions control systems.

Your vehicle has several identifying numbers located in various places.

The Vehicle Identification Number (VIN) is the 17-digit number your Honda dealer uses to register your vehicle for warranty purposes. It is also necessary for licensing and insuring your vehicle. The easiest place to find the VIN is on a plate fastened to the top of the dashboard. You can see it by looking through the windshield on the driver’s side. It is also on the Certification label attached to the driver’s doormamb, and is stamped on the engine compartment bulkhead. The VIN is also provided in bar code on the Certification label.
The Engine Number is stamped into the engine block. It is on the front.

The Transmission Number is on a label on top of the transmission.

Technical Information 387
The treadwear grade is a comparative rating based on the wear rate of the tire when tested under controlled conditions on a specified government test course. For example, a tire graded 150 would wear one and one-half (1 1/2) times as well on the government course as a tire graded 100. The relative performance of tires depends upon the actual conditions of their use, however, and may depart significantly from the norm due to variations in driving habits, service practices and differences in road characteristics and climate.

**Uniform Tire Quality Grading**

Quality grades can be found where applicable on the tire sidewall between the tread shoulder and the maximum section width. For example:

- **Treadwear 200**
- **Traction AA**
- **Temperature A**

All passenger car tires must conform to Federal Safety Requirements in addition to these grades.

**Treadwear**

The treadwear grade is a comparative rating based on the wear rate of the tire when tested under controlled conditions on a specified government test course. For example, a tire graded 150 would wear one and one-half (1 1/2) times as well on the government course as a tire graded 100. The relative performance of tires depends upon the actual conditions of their use, however, and may depart significantly from the norm due to variations in driving habits, service practices and differences in road characteristics and climate.

**Traction — AA, A, B, C**

The traction grades, from highest to lowest, are AA, A, B, and C. Those grades represent the tire’s ability to stop on wet pavement as measured under controlled conditions on specified government test surfaces of asphalt and concrete. A tire marked C may have poor traction performance.

Warning: The traction grade assigned to this tire is based on straight-ahead braking traction tests, and does not include acceleration, cornering, hydroplaning, or peak traction characteristics.
**Temperature — A, B, C**

The temperature grades are A (the highest), B, and C, representing the tire's resistance to the generation of heat and its ability to dissipate heat when tested under controlled conditions on a specified indoor laboratory test wheel. Sustained high temperature can cause the material of the tire to degenerate and reduce tire life, and excessive temperature can lead to sudden tire failure. The grade C corresponds to a level of performance which all passenger car tires must meet under the Federal Motor Vehicle Safety Standard No. 109. Grades B and A represent higher levels of performance on the laboratory test wheel than the minimum required by law.

**Warning:** The temperature grade for this tire is established for a tire that is properly inflated and not overloaded. Excessive speed, underinflation, or excessive loading, either separately or in combination, can cause heat buildup and possible tire failure.
Some conventional gasolines are being blended with alcohol or an ether compound. These gasolines are collectively referred to as oxygenated fuels. To meet clean air standards, some areas of the United States and Canada use oxygenated fuels to help reduce emissions.

If you use an oxygenated fuel, be sure it is unleaded and meets the minimum octane rating requirement.

Before using an oxygenated fuel, try to confirm the fuel's contents. Some states/provinces require this information to be posted on the pump.

The following are the U.S. EPA and Canadian CGSB approved percentages of oxygenates:

**ETHANOL** (ethyl or grain alcohol)
You may use gasoline containing up to 10 percent ethanol by volume. Gasoline containing ethanol may be marketed under the name “Gasohol.”

**MTBE** (Methyl Tertiary Butyl Ether)
You may use gasoline containing up to 15 percent MTBE by volume.

**METHANOL** (methyl or wood alcohol)
Your vehicle was not designed to use fuel that contains methanol. Methanol can corrode metal parts in the fuel system, and also damage plastic and rubber components. This damage would not be covered by your warranties.

If you notice any undesirable operating symptoms, try another service station or switch to another brand of gasoline.

Fuel system damage or performance problems resulting from the use of an oxygenated fuel containing more than the percentages of oxygenates given above are not covered under warranty.
If you are planning to take your Honda outside the U.S. or Canada, contact the tourist bureaus in the areas you will be traveling in to find out about the availability of unleaded gasoline with the proper octane rating.

If unleaded gasoline is not available, be aware that using leaded gasoline in your Honda will affect performance and fuel mileage, and damage its emissions controls. It will no longer comply with U.S. and Canadian emissions regulations, and will be illegal to operate in North America. To bring your vehicle back into compliance will require the replacement of several components, such as the oxygen sensors and the three way catalytic converter. These replacements are not covered under warranty.
The burning of gasoline in your vehicle’s engine produces several by-products. Some of these are carbon monoxide (CO), oxides of nitrogen (NOx) and hydrocarbons (HC). Gasoline evaporating from the tank also produces hydrocarbons. Controlling the production of NOx, CO, and HC is important to the environment. Under certain conditions of sunlight and climate, NOx and HC react to form photochemical “smog.” Carbon monoxide does not contribute to smog creation, but it is a poisonous gas.

**The Clean Air Act**
The United States Clean Air Act* sets standards for automobile emissions. It also requires that automobile manufacturers explain to owners how their emissions controls work and what to do to maintain them. This section summarizes how the emissions controls work. Scheduled maintenance is on page 288.

* In Canada, Honda vehicles comply with the Canadian emission requirements, as specified in an agreement with Environment Canada, at the time they are manufactured.

**Crankcase Emissions Control System**
Your vehicle has a Positive Crankcase Ventilation System. This keeps gasses that build up in the engine’s crankcase from going into the atmosphere. The Positive Crankcase Ventilation valve routes them from the crankcase back to the intake manifold. They are then drawn into the engine and burned.

**Evaporative Emissions Control System**
As gasoline evaporates in the fuel tank, an evaporative emissions control canister filled with charcoal adsorbs the vapor. It is stored in this canister while the engine is off. After the engine is started and warmed up, the vapor is drawn into the engine and burned during driving.

**Onboard Refueling Vapor Recovery**
The Onboard Refueling Vapor Recovery (ORVR) system captures the fuel vapors during refueling. The vapors are adsorbed in a canister filled with activated carbon. While driving, the fuel vapors are drawn into the engine and burned off.
Exhaust Emissions Controls

The exhaust emissions controls include four systems: PGM-FI, Ignition Timing Control, Exhaust Gas Recirculation and Three Way Catalytic Converter. These four systems work together to control the engine’s combustion and minimize the amount of HC, CO, and NOx that comes out the tailpipe. The exhaust emissions control systems are separate from the crankcase and evaporative emissions control systems.

PGM-FI System

The PGM-FI System uses sequential multiport fuel injection. It has three subsystems: Air Intake, Engine Control, and Fuel Control. The Powertrain Control Module (PCM) uses various sensors to determine how much air is going into the engine. It then controls how much fuel to inject under all operating conditions.

Ignition Timing Control System

This system constantly adjusts the ignition timing, reducing the amount of HC, CO and NOx produced.

Exhaust Gas Recirculation (EGR) System

The Exhaust Gas Recirculation (EGR) system takes some of the exhaust gas and routes it back into the intake manifold. Adding exhaust gas to the air/fuel mixture reduces the amount of NOx produced when the fuel is burned.

Three Way Catalytic Converter

The three way catalytic converter is in the exhaust system. Through chemical reactions, it converts HC, CO, and NOx in the engine’s exhaust to carbon dioxide (CO2), dinitrogen (N2), and water vapor.

Replacement Parts

The emissions control systems are designed and certified to work together in reducing emissions to levels that comply with the Clean Air Act. To make sure the emissions remain low, you should use only new Honda replacement parts or their equivalent for repairs. Using lower quality parts may increase the emissions from your vehicle.

The emissions control systems are covered by warranties separate from the rest of your vehicle. Read your warranty manual for more information.
The three way catalytic converter contains precious metals that serve as catalysts, promoting chemical reactions to convert the exhaust gases without affecting the metals. The catalytic converter is referred to as a three-way catalyst, since it acts on HC, CO, and NOx. A replacement unit must be an original Honda part or its equivalent.

The three way catalytic converter must operate at a high temperature for the chemical reactions to take place. It can set on fire any combustible materials that come near it. Park your vehicle away from high grass, dry leaves, or other flammables.

A defective three way catalytic converter contributes to air pollution, and can impair your engine's performance. Follow these guidelines to protect your vehicle's three way catalytic converter.

- Keep the engine tuned-up.
- Have your vehicle diagnosed and repaired if it is misfiring, back-firing, stalling, or otherwise not running properly.

- Always use unleaded gasoline. Even a small amount of leaded gasoline can contaminate the catalyst metals, making the three way catalytic converter ineffective.
Testing of Readiness Codes
If you take your vehicle for a state emissions test shortly after the battery has been disconnected or gone dead, it may not pass the test. This is because of certain “readiness codes” that must be set in the on-board diagnostics for the emissions systems. These codes are erased when the battery is disconnected, and set again only after several days of driving under a variety of conditions.

If the testing facility determines that the readiness codes are not set, you will be requested to return at a later date to complete the test. If you must get the vehicle re-tested within the next two or three days, you can condition the vehicle for re-testing by doing the following.

- Make sure the gas tank is nearly, but not completely, full (around 3/4).
- Make sure the vehicle has been parked with the engine off for 8 hours or more.
- Make sure the ambient temperature is between 20° and 95°F.

- Without touching the accelerator pedal, start the engine and let it idle for 20 seconds.
- Keep the vehicle in Park (automatic transmission). Increase the engine speed to 2,000 rpm and hold it there until the temperature gauge rises to at least 1/4 of the scale (approximately 3 minutes).

CONTINUED
State Emissions Testing

- Select a nearby lightly traveled major highway where you can maintain a speed of 50 to 60 mph (80 to 97 km/h) for at least 20 minutes. Drive on the highway in D (A/T). Do not use the cruise control. When traffic allows, drive for 90 seconds without moving the accelerator pedal. (Vehicle speed may vary slightly; this is okay.) If you cannot do this for a continuous 90 seconds because of traffic conditions, drive for at least 30 seconds, then repeat it two more times (for a total of 90 seconds).

- Then drive in city/suburban traffic for at least 10 minutes. When traffic conditions allow, let the vehicle coast for several seconds without using the accelerator pedal or the brake pedal.

If the testing facility determines the readiness codes are still not set, see your Honda dealer.
Honda dealership personnel are trained professionals. They should be able to answer all your questions. If you encounter a problem that your dealership does not solve to your satisfaction, please discuss it with the dealership’s management. The Service Manager or General Manager can help. Almost all problems are solved in this way.

If you are dissatisfied with the decision made by the dealership’s management, contact your Honda Customer Relations Office.

When you call or write, please give us this information:

• Vehicle Identification Number (see page 384)
• Name and address of the dealer who services your vehicle
• Date of purchase
• Mileage on your vehicle
• Your name, address, and telephone number
• A detailed description of the problem
• Name of the dealer who sold the vehicle to you
**U.S. Owners**
Your new Honda is covered by these warranties:

**New Vehicle Limited Warranty** — covers your new vehicle, except for the battery, emissions control systems and accessories, against defects in materials and workmanship.

**Emissions Control Systems Defects Warranty and Emissions Performance Warranty** — these two warranties cover your vehicle's emissions control systems. Time, mileage, and coverage are conditional. Please read the warranty manual for exact information.

**Original Equipment Battery Limited Warranty** — this warranty gives up to 100 percent credit toward a replacement battery.

</table>

Restrictions and exclusions apply to all these warranties. Please read the 2003 Honda Warranty Information booklet that came with your vehicle for precise information on warranty coverages. Your Honda's original tires are covered by their manufacturer. Tire warranty information is in a separate booklet.

**Canadian Owners**
Please refer to the 2003 Warranty Manual that came with your vehicle.
If you believe that your vehicle has a defect which could cause a crash or could cause injury or death, you should immediately inform the National Highway Traffic Safety Administration (NHTSA) in addition to notifying American Honda Motor Co., Inc.

If NHTSA receives similar complaints, it may open an investigation, and if it finds that a safety defect exists in a group of vehicles, it may order a recall and remedy campaign. However, NHTSA cannot become involved in individual problems between you, your dealer, or American Honda Motor Co., Inc.

To contact NHTSA, you may either call the Auto Safety Hotline toll-free at 1-800-424-9393 (or 366-0123 in Washington D.C. area) or write to: NHTSA, U.S. Department of Transportation, Washington, D.C. 20590. You can also obtain other information about motor vehicle safety from the Hotline.
Purchasing Factory Authorized Manuals
(U.S. only)
The following publications covering the operation and servicing of your vehicle can be obtained from Helm Incorporated, either by filling out the attached form or, for credit card holders, calling the toll-free phone number on the form. For manuals prior to the year shown below, contact Helm Incorporated, P.O. Box 07280, Detroit, Michigan 48207, or call 1-800-782-4356.

Valid only for sales within the U.S. Canadian owners should contact their authorized Honda dealer.

ORDER TOLL FREE: 1-800-782-4356
(NOTE: For Credit Card Holder Orders Only)
Monday-Friday 8:00 A.M. — 6:00 P.M. EST

MINIMUM CREDIT CARD PURCHASE $10.00

OR

By completing this form you can order the materials desired. You can pay by check or money order, or charge to your credit card. Mail to Helm Incorporated at the address shown on the back of the order form.

* Prices are subject to change without notice and without incurring obligation.

Orders are mailed within 10 days. Please allow adequate time for delivery.
This manual complements the Service Manual by providing in-depth troubleshooting information for each electrical circuit in your vehicle.

Service Manual:
This manual covers maintenance and recommended procedures for repair to engine and chassis components. It is written for the Journeyman mechanic, but is simple enough for most mechanically-inclined owners to understand.

Electrical Troubleshooting Manual:
This manual complements the Service Manual by providing in-depth troubleshooting information for each electrical circuit in your vehicle.

Body Repair Manual:
This manual describes the procedures involved in the replacement of damaged body parts.

Service Information Summary

**Gasoline:**
Unleaded gasoline, pump octane number of 86 or higher.

**Fuel Tank Capacity:**
20.00 US gal (75.7 L, 16.65 Imp gal)

**Recommended Engine Oil:**
API Premium grade 5W-20 detergent oil (see page 297).

Oil change capacity (including filter):
4.6 US qt (4.4 L, 3.9 Imp qt)

**Automatic Transmission Fluid:**
Honda ATF-Z1 (Automatic Transmission Fluid) preferred, or a DEXRON® III ATF as a temporary replacement (see page 307).

**Power Steering Fluid:**
Honda Power Steering Fluid preferred, or another brand of power steering fluid as a temporary replacement. Do not use ATF (see page 310).

**Brake Fluid:**
Honda Heavy Duty Brake Fluid DOT 3 preferred, or a DOT 3 or DOT 4 brake fluid as a temporary replacement (see page 309).

**Tire Pressure (measured cold):**
Front/Rear:
36 psi (250 kPa, 2.5 kgf/cm²)

Compact Spare Tire:
60 psi (420 kPa, 4.2 kgf/cm²)
