## Accord Value Package Audio System
This owner's manual should be considered a permanent part of the vehicle and should remain with the vehicle when it is sold.

This owner's manual covers all models of the TSX. You may find descriptions of equipment and features that are not on your particular model.

The information and specifications included in this publication were in effect at the time of approval for printing. Honda Motor Co., Ltd. reserves the right, however, to discontinue or change specifications or design at any time without notice and without incurring any obligation whatsoever.

This owner's manual should be considered a permanent part of the vehicle and should remain with the vehicle when it is sold.

This owner's manual covers all models of the TSX. You may find descriptions of equipment and features that are not on your particular model.

The information and specifications included in this publication were in effect at the time of approval for printing. Honda Motor Co., Ltd. reserves the right, however, to discontinue or change specifications or design at any time without notice and without incurring any obligation whatsoever.
Congratulations! Your selection of a 2007 Acura TSX was a wise investment. It will give you years of driving pleasure.

One of the best ways to enhance the enjoyment of your new vehicle is to read this manual. In it, you will learn how to operate its driving controls and convenience items. Afterwards, keep this owner’s manual in your vehicle so you can refer to it at any time.

Several warranties protect your new vehicle. Read the warranty booklet thoroughly so you understand the coverages and are aware of your rights and responsibilities.

Maintaining your vehicle according to the maintenance minder shown in the instrument panel helps to keep your driving trouble-free while it preserves your investment. When your vehicle needs maintenance, keep in mind that your dealer’s staff is specially trained in servicing the many systems unique to your vehicle. Your dealer is dedicated to your satisfaction and will be pleased to answer any questions and concerns.

As you read this manual, you will find information that is preceded by a symbol. This information is intended to help you avoid damage to your vehicle, other property, or the environment.
California Proposition 65 Warning

**WARNING:** This product contains or emits chemicals known to the state of California to cause cancer and birth defects or other reproductive harm.

Event Data Recorders
This vehicle is equipped with one or more devices commonly referred to as event data recorders. These devices record front seat belt use, front passenger seat occupancy, airbag deployment data, and the failure of any airbag system component. This data belongs to the vehicle owner and may not be accessed by anyone else except as legally required or with the permission of the vehicle owner.

Service Diagnostic Recorders
This vehicle is equipped with service-related devices that record information about powertrain performance. The data can be used to verify emissions law requirements and/or help technicians diagnose and solve service problems. It may also be combined with data from other sources for research purposes, but it remains confidential and is never linked to the vehicle owner.
A Few Words About Safety

Your safety, and the safety of others, is very important. And operating this vehicle safely is an important responsibility.

To help you make informed decisions about safety, we have provided operating procedures and other information on labels and in this manual. This information alerts you to potential hazards that could hurt you or others.

Of course, it is not practical or possible to warn you about all the hazards associated with operating or maintaining your vehicle. You must use your own good judgement.

You will find this important safety information in a variety of forms, including:

- **Safety Labels** — on the vehicle.
- **Safety Messages** — preceded by a safety alert symbol ⚠️ and one of three signal words: **DANGER**, **WARNING**, or **CAUTION**. These signal words mean:
  - **DANGER** — You WILL be KILLED or SERIOUSLY HURT if you don’t follow instructions.
  - **WARNING** — You CAN be KILLED or SERIOUSLY HURT if you don’t follow instructions.
  - **CAUTION** — You CAN be HURT if you don’t follow instructions.

- **Safety Headings** — such as Important Safety Reminders or Important Safety Precautions.
- **Safety Section** — such as Driver and Passenger Safety.
- **Instructions** — how to use this vehicle correctly and safely.

This entire book is filled with important safety information — please read it carefully.
Your Vehicle at a Glance

Vehicle without navigation system is shown.

- DRIVER'S FRONT AIRBAG (P.9, 26)

Important Safety Precautions

You’ll find many safety recommendations throughout this section, and throughout this manual. The recommendations on this page are the ones we consider to be the most important.

**Always Wear Your Seat Belt**
A seat belt is your best protection in all types of collisions. Airbags are designed to supplement seat belts, not replace them. So even though your vehicle is equipped with airbags, make sure you and your passengers always wear your seat belts, and wear them properly (see page 15).

**Restrain All Children**
Children age 12 and under should ride properly restrained in a back seat, not the front seat. Infants and small children should be restrained in a child seat. Larger children should use a booster seat and a lap/shoulder belt until they can use the belt properly without a booster seat (see pages 36 – 54).

**Be Aware of Airbag Hazards**
While airbags can save lives, they can cause serious or fatal injuries to occupants who sit too close to them, or are not properly restrained. Infants, young children, and short adults are at the greatest risk. Be sure to follow all instructions and warnings in this manual.

**Don’t Drink and Drive**
Alcohol and driving don’t mix. Even one drink can reduce your ability to respond to changing conditions, and your reaction time gets worse with every additional drink. So don’t drink and drive, and don’t let your friends drink and drive, either.

**Control Your Speed**
Excessive speed is a major factor in crash injuries and deaths. Generally, the higher the speed, the greater the risk, but serious injuries can also occur at lower speeds. Never drive faster than is safe for current conditions, regardless of the maximum speed posted.

**Keep Your Vehicle in Safe Condition**
Having a tire blowout or a mechanical failure can be extremely hazardous. To reduce the possibility of such problems, check your tire pressures and condition frequently, and perform all regularly scheduled maintenance (see page 310).
Your vehicle is equipped with many features that work together to protect you and your passengers during a crash.

Some features do not require any action on your part. These include a strong steel framework that forms a safety cage around the passenger compartment, front and rear crush zones, a collapsible steering column, and tensioners that tighten the front seat belts in a crash.

However, you and your passengers can't take full advantage of these features unless you remain sitting in a proper position and always wear your seat belts. In fact, some safety features can contribute to injuries if they are not used properly.

The following pages explain how you can take an active role in protecting yourself and your passengers.
Your vehicle is equipped with seat belts in all seating positions.

Your seat belt system also includes an indicator on the instrument panel and a beeper to remind you and your passengers to fasten your seat belts.

**Why Wear Seat Belts**
Seat belts are the single most effective safety device for adults and larger children. (Infants and smaller children must be properly restrained in child seats.)

Not wearing a seat belt properly increases the chance of serious injury or death in a crash, even though your vehicle has airbags.

In addition, most states and all Canadian provinces require you to wear seat belts.

When properly worn, seat belts:
- Keep you connected to the vehicle so you can take advantage of the vehicle’s built-in safety features.
- Help protect you in almost every type of crash, including frontal, side, and rear impacts and rollovers.

**WARNING**
Not wearing a seat belt properly increases the chance of serious injury or death in a crash, even though your vehicle has airbags.

Be sure you and your passengers always wear seat belts and wear them properly.

- Help keep you from being thrown against the inside of the vehicle and against other occupants.
- Keep you from being thrown out of the vehicle.
- Help keep you in a good position should the airbags ever deploy. A good position reduces the risk of injury from an inflating airbag and allows you to get the best advantage from the airbag.

Of course, seat belts cannot completely protect you in every crash. But in most cases, seat belts can reduce your risk of serious injury.

**What You Should Do:**
Always wear your seat belt, and make sure you wear it properly.
Your vehicle has a supplemental restraint system (SRS) with front airbags to help protect the heads and chests of the driver and a front seat passenger during a moderate to severe frontal collision (see page 26 for more information on how your front airbags work).

Your vehicle also has side airbags to help protect the upper torso of the driver or a front seat passenger during a moderate to severe side impact (see page 30 for more information on how your side airbags work).

In addition, your vehicle has side curtain airbags to help protect the heads of the driver, front passenger, and passengers in the outer rear seating positions during a moderate to severe side impact (see page 31 for more information on how your side curtain airbags work).
The most important things you need to know about your airbags are:

- **Airbags do not replace seat belts.** They are designed to supplement the seat belts.

- **Airbags offer no protection in rear impacts, or minor frontal or side collisions.**

- **Airbags can pose serious hazards.** To do their job, airbags must inflate with tremendous force. So while airbags help save lives, they can cause minor injuries or more serious or even fatal injuries if occupants are not properly restrained or sitting properly.

**What you should do:** Always wear your seat belt properly, and sit upright and as far back from the steering wheel as possible while allowing full control of the vehicle. A front passenger should move their seat as far back from the dashboard as possible.

The rest of this section gives more detailed information about how you can maximize your safety.

Remember, however, that no safety system can prevent all injuries or deaths that can occur in a severe crash, even when seat belts are properly worn and the airbags deploy.
The following pages provide instructions on how to properly protect the driver, adult passengers, and teenage children who are large enough and mature enough to drive or ride in the front.

See pages 36 – 40 for important guidelines on how to properly protect infants, small children, and larger children who ride in your vehicle.

Introduction

1. Close and Lock the Doors

After everyone has entered the vehicle, be sure the doors are closed and locked.

Your vehicle has a door and trunk open monitor on the multi-information display to indicate when a specific door or the trunk is not tightly closed. You will see the appropriate light/lights and the message for each condition.

When one or more doors are not tightly closed, the “DOOR OPEN” message will come on.

CONTINUED
Locking the doors reduces the chance of someone being thrown out of the vehicle during a crash, and it helps prevent passengers from accidentally opening a door and falling out.

Locking the doors also helps prevent an outsider from unexpectedly opening a door when you come to a stop.

See page 129 for how to lock the doors.

2. Adjust the Front Seats

Adjust the driver’s seat as far to the rear as possible while allowing you to maintain full control of the vehicle. Have a front passenger adjust their seat as far to the rear as possible.

If you sit too close to the steering wheel or dashboard, you can be seriously injured by an inflating front airbag, or by striking the steering wheel or dashboard.
Protecting Adults and Teens

The National Highway Traffic Safety Administration and Transport Canada recommend that drivers allow at least 10 inches (25 cm) between the center of the steering wheel and the chest. In addition to adjusting the seat, you can adjust the steering wheel up and down, and in and out (see page 125).

If you cannot get far enough away from the steering wheel and still reach the controls, we recommend that you investigate whether some type of adaptive equipment may help.

**WARNING**

Sitting too close to a front airbag can result in serious injury or death if the front airbags inflate.

Always sit as far back from the front airbags as possible.

See page 138 for how to adjust the front seats.

3. Adjust the Seat-Backs

Adjust the driver’s seat-back to a comfortable, upright position, leaving ample space between your chest and the airbag cover in the center of the steering wheel.

Passengers with adjustable seat-backs should also adjust their seat-back to a comfortable, upright position.

CONTINUED
Adjust the driver’s head restraint so the back of your head rests against the center of the restraint.

See page 139 for how to adjust the head restraints.
5. Fasten and Position the Seat Belts

Insert the latch plate into the buckle, then tug on the belt to make sure the belt is securely latched. Check that the belt is not twisted, because a twisted belt can cause serious injuries in a crash.

Position the lap part of the belt as low as possible across your hips, then pull up on the shoulder part of the belt so the lap part fits snugly. This lets your strong pelvic bones take the force of a crash and reduces the chance of internal injuries.

If necessary, pull up on the belt again to remove any slack, then check that the belt rests across the center of your chest and over your shoulder.

This spreads the forces of a crash over the strongest bones in your upper body.

**WARNING**

Improperly positioning the seat belts can cause serious injury or death in a crash.

Make sure all seat belts are properly positioned before driving.

If the seat belt touches or crosses your neck, or if it crosses your arm instead of your shoulder, you need to adjust the seat belt anchor height.

CONTINUED
After all occupants have adjusted their seats and put on seat belts, it is very important that they continue to sit upright, well back in their seats, with their feet on the floor, until the vehicle is parked and the engine is off.

Sitting improperly can increase the chance of injury during a crash. For example, if an occupant slouches, lies down, turns sideways, sits forward, leans forward or sideways, or puts one or both feet up, the chance of injury during a crash is greatly increased.

Never place the shoulder portion of a lap/shoulder belt under your arm or behind your back. This could cause very serious injuries in a crash.

If a seat belt does not seem to work properly, it may not protect the occupant in a crash.

No one should sit in a seat with an inoperative seat belt. Using a seat belt that is not working properly can result in serious injury or death. Have your dealer check the belt as soon as possible.

See page 19 for additional information about your seat belts and how to take care of them.

The front seats have adjustable seat belt anchors. To adjust the height of an anchor, squeeze the two release buttons, and slide the anchor up or down as needed (it has four positions).

6. Maintain a Proper Sitting Position

After all occupants have adjusted their seats and put on seat belts, it is very important that they continue to sit upright, well back in their seats, with their feet on the floor, until the vehicle is parked and the engine is off.

Sitting improperly can increase the chance of injury during a crash. For example, if an occupant slouches, lies down, turns sideways, sits forward, leans forward or sideways, or puts one or both feet up, the chance of injury during a crash is greatly increased.
When driving, remember to sit upright and adjust the seat as far back as possible while allowing full control of the vehicle. When riding as a front passenger, adjust the seat as far back as possible.

This will reduce the risk of injuries to both you and your unborn child that can be caused by a crash or an inflating front airbag.

Each time you have a checkup, ask your doctor if it’s okay for you to drive.

Advice for Pregnant Women

If you are pregnant, the best way to protect yourself and your unborn child when driving or riding in a vehicle is to always wear a seat belt, and keep the lap part of the belt as low as possible across the hips.

In addition, an occupant who is out of position in the front seat can be seriously or fatally injured in a crash by striking interior parts of the vehicle or being struck by an inflating front airbag.

**WARNING**

Sitting improperly or out of position can result in serious injury or death in a crash.

Always sit upright, well back in the seat, with your feet on the floor.
Additional Safety Precautions

- **Two people should never use the same seat belt.** If they do, they could be very seriously injured in a crash.

- **Do not put any accessories on seat belts.** Devices intended to improve occupant comfort or reposition the shoulder part of a seat belt can reduce the protective capability of the belt and increase the chance of serious injury in a crash.

- **Do not place hard or sharp objects between yourself and a front airbag.** Carrying hard or sharp objects on your lap, or driving with a pipe or other sharp object in your mouth, can result in injuries if your front airbag inflates.

- **Keep your hands and arms away from the airbag covers.** If your hands or arms are close to an airbag cover, they could be injured if the airbag inflates.

- **Do not attach or place objects on the front airbag covers.** Objects on the covers marked “SRS AIRBAG” could interfere with the proper operation of the airbags or be propelled inside the vehicle and hurt someone if the airbags inflate.

- **Do not attach hard objects on or near a door.** If a side airbag or a side curtain airbag inflates, a cup holder or other hard object attached on or near the door could be propelled inside the vehicle and hurt someone.
Additional Information About Your Seat Belts

Seat Belt System Components
Your seat belt system includes lap/shoulder belts in all five seating positions. The front seat belts are also equipped with automatic seat belt tensioners.

This system uses the same sensors as the front airbags to monitor whether the front seat belts are latched or unlatched, and how much weight is on the front passenger’s seat (see pages 28 and 29).

The seat belt system includes an indicator on the instrument panel and a beeper to remind you and your passengers to fasten your seat belts.

If you turn the ignition switch to the ON (II) position before your seat belt is fastened, the beeper will sound and the indicator will flash. If your seat belt is not fastened before the beeper stops, the indicator will stop flashing but remain on.

If a front passenger does not fasten their seat belt, the indicator will come on about 6 seconds after the ignition switch is turned to the ON (II) position.

If either the driver or a front passenger does not fasten their seat belt while driving, the beeper will sound and the indicator will flash again at regular intervals.

You will also see a “FASTEN SEAT BELT” or “FASTEN PASSENGER SEAT BELT” message on the multi-information display (see page 78).

When no one is sitting in the front passenger’s seat, or a child or small adult is riding there, the indicator should not come on and the beeper should not sound.

CONTINUED
Additional Information About Your Seat Belts

If the indicator comes on or the beeper sounds when the driver’s seat belt is latched and there is no front seat passenger and no items on the front seat, something may be interfering with the monitoring system. Look for and remove:

- Any items under the front passenger’s seat.
- Any objects hanging on the seat or in the seat-back pocket.
- Any objects, such as a folded-down back seat, that are touching the rear of the seat-back.

If no obstructions are found, have your vehicle checked by a dealer.

Lap/Shoulder Belt
The lap/shoulder belt goes over your shoulder, across your chest, and across your hips.

To fasten the belt, insert the latch plate into the buckle, then tug on the belt to make sure the buckle is latched (see page 15 for how to properly position the belt).

To unlock the belt, press the red PRESS button on the buckle. Guide the belt across your body so that it retracts completely. After exiting the vehicle, be sure the belt is out of the way and will not get closed in the door.

All seat belts have an emergency locking retractor. In normal driving, the retractor lets you move freely in your seat while it keeps some tension on the belt. During a collision or sudden stop, the retractor automatically locks the belt to help restrain your body.

The seat belts in all positions except the driver’s have a lockable retractor that must be activated to secure a child seat (see page 48).
The tensioners are designed to activate in any collision severe enough to cause the front airbags to deploy. If a side airbag or side curtain airbag deploys during a side impact, the tensioner on that side of the vehicle will also deploy.

The tensioners can also be activated during a collision in which the front airbags do not deploy. In this case, the airbags would not be needed, but the additional restraint could be helpful.

When the tensioners are activated, the seat belts will remain tight until they are unbuckled.

If the shoulder part of the belt is pulled all the way out, the lockable retractor will activate. The belt will retract, but it will not allow the passenger to move freely.

To deactivate the lockable retractor, unlatch the buckle and let the seat belt fully retract. To refasten the seat belt, pull it out only as far as needed.

For added protection, the front seat belts are equipped with automatic seat belt tensioners. When activated, the tensioners immediately tighten the belts to help hold the driver and a front passenger in position.
Seat Belt Maintenance
For safety, you should check the condition of your seat belts regularly.

Pull each belt out fully, and look for frays, cuts, burns, and wear. Check that the latches work smoothly and the belts retract easily. If a belt does not retract easily, cleaning the belt may correct the problem (see page 306). Any belt that is not in good condition or working properly will not provide good protection and should be replaced as soon as possible.

Acura provides a limited warranty on seat belts. See your *Acura Warranty Information* booklet for details.

If a seat belt is worn during a crash, it must be replaced by the dealer. A belt that has been worn during a crash may not provide the same level of protection in a subsequent crash.

The dealer should also inspect the anchors for damage and replace them if needed. If the automatic seat belt tensioners activate during a crash, they must be replaced.

**WARNING**
Not checking or maintaining seat belts can result in serious injury or death if the seat belts do not work properly when needed.

Check your seat belts regularly and have any problem corrected as soon as possible.
Airbag System Components

1. Driver’s Front Airbag
2. Passenger’s Front Airbag
3. Control Unit
4. Front Seat Belt Tensioners
5. Side Airbags
6. Driver’s Seat Position Sensor
7. Front Passenger’s Weight Sensors
8. Front Impact Sensors
9. Passenger Airbag Off Indicator
10. Side Impact Sensors (First)
11. Occupant Position Detection System (OPDS) Sensors
12. Front Passenger’s Weight Sensors/OPDS Sensors Control Unit
13. Side Impact Sensors (Second)
14. Side Curtain Airbags
15. Supplemental Restraint System (SRS) Indicator
Your airbag system includes:

- Two SRS (supplemental restraint system) front airbags. The driver’s airbag is stored in the center of the steering wheel; the front passenger’s airbag is stored in the dashboard. Both are marked “SRS AIRBAG” (see page 26).

- Two side airbags, one for the driver and one for a front passenger. The airbags are stored in the outer edges of the seatbacks. Both are marked “SIDE AIRBAG” (see page 30).

- Two side curtain airbags, one for each side of the vehicle. The airbags are stored in the ceiling, above the side windows. The front and rear pillars are marked “SIDE CURTAIN AIRBAG” (see page 31).

- Automatic front seat belt tensioners (see page 21).

- Sensors that can detect a moderate to severe front impact or side impact.

- Sensors that can detect whether a child is in the passenger’s side airbag path and signal the control unit to turn the airbag off (see page 30).

- Sensors that can detect whether the driver’s seat belt and a front passenger’s seat belt is latched or unlatched (see page 19).

- A driver’s seat position sensor that monitors the distance of the seat from the front airbag. If the seat is too far forward, the airbag will inflate with less force (see page 28).
Additional Information About Your Airbags

- Sensors that monitor the weight on the front passenger’s seat. If the weight is about 65 lbs (29 kg) or less (the weight of an infant or small child), the passenger’s front airbag will be turned off (see page 28).

- A sophisticated electronic system that continually monitors and records information about the sensors, the control unit, the airbag activators, the seat belt tensioners, and driver and front passenger seat belt use when the ignition switch is in the ON (II) position.

- An indicator on the instrument panel that alerts you to a possible problem with your airbags, sensors, or seat belt tensioners (see page 32).

- An indicator on the instrument panel that alerts you that the passenger’s side airbag has been turned off (see page 32).

- An indicator on the dashboard that alerts you that the passenger’s front airbag has been turned off (see page 33).

- Emergency backup power in case your vehicle’s electrical system is disconnected in a crash.
After inflating, the front airbags immediately deflate, so they won’t interfere with the driver’s visibility, or the ability to steer or operate other controls.

Additional Information About Your Airbags

How Your Front Airbags Work

During a frontal crash, your seat belt restrains your lower body and torso, and the front airbag helps protect your head and chest.

Although both airbags normally inflate within a split second of each other, it is possible for only one airbag to deploy.

This can happen if the severity of a collision is at the margin, or threshold, that determines whether or not the airbags will deploy. In such cases, the seat belt will provide sufficient protection, and the supplemental protection offered by the airbag would be minimal.

Only the driver’s airbag will deploy if there is no passenger in the front seat, or if the advanced airbag system has turned the passenger’s airbag off (see page 28).

If you ever have a moderate to severe frontal collision, sensors will detect the vehicle’s rapid deceleration.

If the rate of deceleration is high enough, the control unit will instantly inflate the driver’s and front passenger’s airbags, at the time and with the force needed.
The total time for inflation and deflation is one-tenth of a second, so fast that most occupants are not aware that the airbags deployed until they see them lying in their laps.

After a crash, you may see what looks like smoke. This is actually powder from the airbag’s surface. Although the powder is not harmful, people with respiratory problems may experience some temporary discomfort. If this occurs, get out of the vehicle as soon as it is safe to do so.

**Dual-Stage Airbags**
Your front airbags are dual-stage airbags. This means they have two inflation stages that can be ignited sequentially or simultaneously, depending on crash severity.

In a **more severe** crash, both stages will ignite simultaneously to provide the quickest and greatest protection.

In a **less severe** crash, one stage will ignite first, then the second stage will ignite a split second later. This provides longer airbag inflation time with a little less force.

**Dual-Threshold Airbags**
Your front airbags are also dual-threshold airbags. Airbags with this feature have two deployment thresholds that depend on whether sensors detect the occupant is wearing a seat belt or not.

If the occupant’s belt is **not latched**, the airbag will deploy at a slightly lower threshold, because the occupant would need extra protection.

If the occupant’s belt is **latched**, the airbag will inflate at a slightly higher threshold, when the airbag would be needed to supplement the protection provided by the seat belt.
Advanced Airbags
Your front airbags are also advanced airbags. The main purpose of this feature is to help prevent airbag-caused injuries to short drivers and children who ride in front.

For both advanced airbags to work properly:

- Occupants must sit upright and wear their seat belts properly.
- Do not spill any liquids on or under the seats, cover the sensors, or put any cargo or metal objects under the front seats.
- Back-seat passengers should not put their feet under the front seats.

Failure to follow these instructions could damage the sensors or prevent them from working properly.

The driver’s advanced front airbag system includes a seat position sensor under the seat. If the seat is too far forward, the airbag will inflate with less force, regardless of the severity of the impact.

If there is a problem with the sensor, the SRS indicator will come on, and the airbag will inflate in the normal manner regardless of the driver’s seating position.

The passenger’s advanced front airbag system has weight sensors under the seat. Although Acura does not encourage carrying an infant or small child in front, if the sensors detect the weight of an infant or small child (up to about 65 lbs or 29 kg), the system will automatically turn the passenger’s front airbag off.
Be aware that objects placed on the passenger’s seat can also cause the airbag to be turned off.

When the airbag is turned off, a “passenger airbag off” indicator in the center of the dashboard comes on (see page 33).

If the weight sensors detect there is no passenger in the front seat, the airbag will be off. However, the passenger airbag off indicator will not come on.

To ensure that the passenger’s advanced front airbag system will work properly, do not do anything that would increase or decrease the weight on the front passenger’s seat. This includes:

• A rear passenger pushing or pulling on the back of the front passenger’s seat.

• Moving the front seat forcibly back against cargo on the seat or floor behind it.

• Hanging heavy items on the front passenger seat, or placing heavy items in the seat-back pocket.

• Moving the front seat or seat-back forcibly back against the folded rear seat.

Also, make sure the floor mat behind the front passenger’s seat is hooked to the floor mat anchor (see page 306). If it is not, the mat may interfere with the proper operation of the sensors and operation of the seat.
How Your Side Airbags Work

If you ever have a moderate to severe side impact, sensors will detect rapid acceleration and signal the control unit to instantly inflate either the driver’s or the passenger’s side airbag and activate the seat belt tensioner on the affected side.

Only one airbag will deploy during a side impact. If the impact is on the passenger’s side, the passenger’s side airbag will deploy even if there is no passenger.

To get the best protection from the side airbags, front seat occupants should wear their seat belts and sit upright and well back in their seats.

Side Airbag Cutoff System

Your vehicle has a side airbag cutoff system designed primarily to protect a child riding in the front passenger’s seat.

Although Acura does not encourage children to ride in front, if the sensors in the seat detect a child has leaned into the side airbag’s deployment path, the airbag will shut off.

The side airbag may also shut off if a short adult leans sideways, or a larger adult slouches and leans sideways into the airbag’s deployment path.

Objects placed on the front passenger seat can also cause the side airbag to be shut off.
Additional Information About Your Airbags

If the side airbag off indicator comes on (see page 32), have the passenger sit upright. Once the passenger is out of the airbag’s deployment path, the system will turn the airbag back on, and the indicator will go out.

There will be some delay between the moment the passenger moves into or out of the airbag deployment path and when the indicator comes on or goes off.

A front seat passenger should not use a cushion or other object as a backrest. It may prevent the cutoff system from working properly.

If the impact is on the passenger’s side, the passenger’s side curtain airbag will inflate even if there are no occupants on that side of the vehicle.

To get the best protection from the side curtain airbags, occupants should wear their seat belts and sit upright and well back in their seats.

How Your Side Curtain Airbags Work

In a moderate to severe side impact, sensors will detect rapid acceleration and signal the control unit to instantly inflate the side curtain airbag and activate the seat belt tensioner on the driver’s or the passenger’s side of the vehicle.
Additional Information About Your Airbags

How the SRS Indicator Works

The SRS indicator alerts you to a potential problem with your airbags or seat belt tensioners.

When you turn the ignition switch to the ON (II) position, this indicator comes on for several seconds then goes off. This tells you the system is working properly.

If the indicator comes on at any other time, or does not come on at all, you should have the system checked by your dealer. For example:

- If the SRS indicator does not come on after you turn the ignition switch to the ON (II) position.
- If the indicator stays on after the engine starts.
- If the indicator comes on or flashes on and off while you drive.

You will also see a “CHECK AIRBAG SYSTEM” message on the multi-information display (see page 83).

If you see any of these indications, the airbags and seat belt tensioners may not work properly when you need them.

If the SRS indicator does not come on after you turn the ignition switch to the ON (II) position.

If the indicator comes on at any other time, or does not come on at all, you should have the system checked by your dealer. For example:

- When you turn the ignition switch to the ON (II) position, this indicator comes on for several seconds then goes off. This tells you the system is working properly.
- When you turn the ignition switch to the ON (II) position, the indicator should come on for several seconds and then go off (see page 64). If it doesn’t come on, stays on, or comes on while driving without a passenger in the front seat, have the system checked.

You will also see a “PASSENGER SIDE AIRBAG OFF” message on the multi-information display (see page 82).

How the Side Airbag Off Indicator Works

This indicator alerts you that the passenger’s side airbag has been automatically shut off. It does not mean there is a problem with your side airbags.

When you turn the ignition switch to the ON (II) position, the indicator should come on for several seconds and then go off (see page 64). If it doesn’t come on, stays on, or comes on while driving without a passenger in the front seat, have the system checked.

If you see any of these indications, the airbags and seat belt tensioners may not work properly when you need them.

WARNING

Ignoring the SRS indicator can result in serious injury or death if the airbag systems or tensioners do not work properly.

Have your vehicle checked by a dealer as soon as possible if the SRS indicator alerts you to a possible problem.
How the Passenger Airbag Off Indicator Works

This indicator alerts you that the passenger’s front airbag has been shut off because weight sensors detect about 65 lbs (29 kg) or less (the weight of an infant or small child) on the front passenger’s seat. It does not mean there is a problem with the airbag.

Be aware that objects placed on the front seat can cause the indicator to come on.

If no weight is detected on the front seat, the airbag will be automatically shut off. However, the indicator will not come on.

The passenger airbag off indicator may come on and off repeatedly if the total weight on the seat is near the airbag cutoff threshold.

If an adult or teenage passenger is riding in front, move the seat as far to the rear as possible, and have the passenger sit upright and wear the seat belt properly.

If the indicator comes on with no front seat passenger and no objects on the seat, or with an adult riding there, something may be interfering with the weight sensors. Look for and remove:

- Any items under the front passenger’s seat.
- Any object hanging on the seat or in the seat-back pocket.
- Any object, such as a folded-down back seat, that is touching the rear of the seat-back.

If no obstructions are found, have your vehicle checked by a dealer as soon as possible.

Any object, such as a folded-down back seat, that is touching the rear of the seat-back.
Additional Information About Your Airbags

Airbag Service
Your airbag systems are virtually maintenance free, and there are no parts you can safely service. However, you must have your vehicle serviced if:

- **An airbag ever inflates.** Any airbag that has deployed must be replaced along with the control unit and other related parts. Any seat belt tensioner that activates must also be replaced.

  Do not try to remove or replace any airbag by yourself. This must be done by an authorized dealer or a knowledgeable body shop.

- **The SRS indicator alerts you to a problem.** Take your vehicle to an authorized dealer as soon as possible. If you ignore this indication, your airbags may not operate properly.

- **If your vehicle has a moderate to severe impact.** Even if your airbags do not inflate, your dealer should inspect the driver's seat position sensor, the front passenger's weight sensors, the front seat belt tensioners, and all seat belts worn during the crash to make sure they are operating properly.
Additional Information About Your Airbags

Additional Safety Precautions

- **Do not attempt to deactivate your airbags.** Together, airbags and seat belts provide the best protection.

- **Do not tamper with airbag components or wiring for any reason.** Tampering could cause the airbags to deploy, possibly causing very serious injury.

- **Do not expose the front passenger’s seat-back to liquid.** If water or another liquid soaks into a seat-back, it can prevent the side airbag cutoff system from working properly.

- **Do not cover or replace front seat-back covers without consulting your dealer.** Improperly replacing or covering front seat-back covers can prevent your side airbags from inflating during a side impact.

- **Do not remove or modify a front seat without consulting your dealer.** This could make the driver’s seat position sensor or the front passenger’s weight sensors ineffective. If it is necessary to remove or modify a front seat to accommodate a person with disabilities, first contact Acura Client Services at 800-382-2238.
If you have children, or ever need to drive with a child in your vehicle, be sure to read this section. It begins with important general guidelines, then presents special information for infants, small children, and larger children.

Each year, many children are injured or killed in vehicle crashes because they are either unrestrained or not properly restrained. In fact, vehicle accidents are the number one cause of the death of children ages 12 and under.

To reduce the number of child deaths and injuries, every state and Canadian province requires that infants and children be properly restrained when they ride in a vehicle.

Children depend on adults to protect them. However, despite their best intentions, many adults do not know how to properly protect child passengers.

If you have children, or ever need to drive with a child in your vehicle, be sure to read this section. It begins with important general guidelines, then presents special information for infants, small children, and larger children.

All Children Must Be Restrained

Children who are unrestrained or improperly restrained can be seriously injured or killed in a crash.

Any child too small for a seat belt should be properly restrained in a child seat. A larger child should be properly restrained with a seat belt and use a booster seat if necessary.

Larger children must be restrained with a lap/shoulder belt and ride on a booster seat until the seat belt fits them properly (see pages 51 – 54).
Protecting Children — General Guidelines

All Children Should Sit in a Back Seat
According to accident statistics, children of all ages and sizes are safer when they are restrained in a back seat. The National Highway Traffic Safety Administration and Transport Canada recommend that all children aged 12 and under be properly restrained in a back seat. Some states have laws restricting where children may ride.

Children who ride in back are less likely to be injured by striking interior vehicle parts during a collision or hard braking. Also, children cannot be injured by an inflating front airbag when they ride in the back.

The Passenger’s Front Airbag Can Pose Serious Risks
Front airbags have been designed to help protect adults in a moderate to severe frontal collision. To do this, the passenger’s front airbag is quite large, and it can inflate with enough force to cause very serious injuries.

Even though your vehicle has an advanced front airbag system that automatically turns the passenger’s front airbag off (see page 33), please follow these guidelines:

Infants
Never put a rear-facing child seat in the front seat of a vehicle equipped with a passenger’s front airbag. If the airbag inflates, it can hit the back of the child seat with enough force to kill or very seriously injure an infant.

Small Children
Placing a forward-facing child seat in the front seat of a vehicle equipped with a passenger’s front airbag can be hazardous. If the vehicle seat is too far forward, or the child’s head is thrown forward during a collision, an inflating front airbag can strike the child with enough force to kill or very seriously injure a small child.

Larger Children
Children who have outgrown child seats are also at risk of being injured or killed by an inflating passenger’s front airbag. Whenever possible, larger children should sit in the back seat, on a booster seat if needed, and be properly restrained with a seat belt (see page 51 for important information about protecting larger children).

CONTINUED
To remind you of the passenger’s front airbag hazards, and that children must be properly restrained in a back seat, your vehicle has warning labels on the dashboard (U.S. models) and on the front visors. Please read and follow the instructions on these labels.

**U.S. Models**

**SUN VISORS**

![Airbag Warning]

**WARNING**

*Even with Advanced Air Bags*

- The bag deploys when the sensor detects an impact to the vehicle.
- The bag inflates from the dash board or the visor.
- The bag inflates from the passenger seat, but only if it is properly installed.

**CAUTION**

- To avoid serious injury:
  - For maximum safety protection in all types of crashes, you must always wear your safety belt.
  - Do not install rearward-facing child seats in any front passenger seat position.
  - Do not sit or lean unnecessarily close to the air bag.
  - Do not place any objects over the air bag or between the air bag and yourself.
  - See the owner’s manual for further information and explanations.

**Canadian Models**

**SUN VISORS**

**PRECAUTIONS:**

- Pour éviter des blessures graves:
  - Pour profiter d’une protection maximale lors d’une collision bouclez toujours votre ceinture de sécurité.
  - N’installez jamais un siège pour enfants tournant face à l’arrière sur le siège du passager avant.
  - Ne vous appuyez pas et ne vous asseyez pas près du coussin gonflable.
  - Ne déposez aucun objet sur le coussin gonflable ou entre le coussin gonflable et vous.
  - Lisez le guide utilisateur pour de plus amples renseignements.

---

**DASHBOARD**

This Vehicle is Equipped with Advanced Air Bags

- Children can be killed or seriously injured by the air bag.
- The back seat is the safest place for children.
- Never put a rear-facing child seat in the front.
- Always use seat belts and child restraints.
- See owner’s manual for more information about air bags.

To be removed by owner only.
If You Must Drive with Several Children
Your vehicle has a back seat where children can be properly restrained. If you ever have to carry a group of children, and a child must ride in front:

- Place the largest child in the front seat, provided the child is large enough to wear the lap/shoulder belt properly (see page 51).
- Move the vehicle seat as far to the rear as possible (see page 12).
- Have the child sit upright and well back in the seat (see page 16).
- Make sure the seat belt is properly positioned and secured (see page 15).

If a Child Requires Close Attention
Many parents say they prefer to put an infant or a small child in the front passenger seat so they can watch the child, or because the child requires attention.

Placing a child in the front seat exposes the child to hazards in a frontal collision, and paying close attention to a child distracts the driver from the important tasks of driving, placing both of you at risk.

If a child requires close physical attention or frequent visual contact, we strongly recommend that another adult ride with the child in a back seat. The back seat is far safer for a child than the front.

Many parents say they prefer to put an infant or a small child in the front passenger seat so they can watch the child, or because the child requires attention.
Additional Safety Precautions

- **Never hold an infant or child on your lap.** If you are not wearing a seat belt in a crash, you could be thrown forward and crush the child against the dashboard or a seat-back. If you are wearing a seat belt, the child can be torn from your arms and be seriously hurt or killed.

- **Never put a seat belt over yourself and a child.** During a crash, the belt could press deep into the child and cause serious or fatal injuries.

- **Never let two children use the same seat belt.** If they do, they could be very seriously injured in a crash.

- **Use the childproof door locks to prevent children from opening the rear doors.** This can prevent children from accidentally falling out (see page 130).

- **Make sure any unused seat belt that a child can reach is buckled, the lockable retractor is activated, and the belt is fully retracted and locked.** If a child wraps a loose seat belt around their neck, they can be seriously or fatally injured. (See pages 48 and 49 for how to activate and deactivate the lockable retractor.)

- **Do not leave children alone in a vehicle.** Leaving children without adult supervision is illegal in most states and Canadian provinces, and can be very hazardous.

- **Lock all doors and the trunk when your vehicle is not in use.** Children who play in vehicles can accidentally get trapped inside. Teach your children not to play in or around vehicles. Know how to operate the emergency trunk opener and decide if your children should be shown how to use this feature (see page 136).

- **Keep vehicle keys and remote transmitters out of the reach of children.** Even very young children learn how to unlock vehicle doors, turn on the ignition switch, and open the trunk, which can lead to accidental injury or death.

- **Protecting Children – General Guidelines**

  - **Never put a seat belt over yourself and a child.** During a crash, the belt could press deep into the child and cause serious or fatal injuries.

  - **Never let two children use the same seat belt.** If they do, they could be very seriously injured in a crash.

  - **Use the childproof door locks to prevent children from opening the rear doors.** This can prevent children from accidentally falling out (see page 130).

  - **Make sure any unused seat belt that a child can reach is buckled, the lockable retractor is activated, and the belt is fully retracted and locked.** If a child wraps a loose seat belt around their neck, they can be seriously or fatally injured. (See pages 48 and 49 for how to activate and deactivate the lockable retractor.)

  - **Do not leave children alone in a vehicle.** Leaving children without adult supervision is illegal in most states and Canadian provinces, and can be very hazardous.

  - **Lock all doors and the trunk when your vehicle is not in use.** Children who play in vehicles can accidentally get trapped inside. Teach your children not to play in or around vehicles. Know how to operate the emergency trunk opener and decide if your children should be shown how to use this feature (see page 136).

  - **Keep vehicle keys and remote transmitters out of the reach of children.** Even very young children learn how to unlock vehicle doors, turn on the ignition switch, and open the trunk, which can lead to accidental injury or death.
Protecting Infants

Child Seat Type
An infant must be properly restrained in a rear-facing, reclining child seat until the child reaches the seat maker’s weight or height limit for the seat, and the child is at least one year old.

Protecting Infants

Only a rear-facing child seat provides proper support for a baby’s head, neck, and back.

Two types of seats may be used: a seat designed exclusively for infants, or a convertible seat used in the rear-facing, reclining mode.

Do not put a rear-facing child seat in a forward-facing position. If placed facing forward, an infant could be very seriously injured during a frontal collision.

Rear-facing Child Seat Placement
A rear-facing child seat can be placed in any seating position in the back seat, but not in the front. Never put a rear-facing child seat in the front seat.

If the passenger’s front airbag inflates, it can hit the back of the child seat with enough force to kill or seriously injure an infant.

When properly installed, a rear-facing child seat may prevent the driver or a front passenger from moving their seat as far back as recommended, or from locking their seat-back in the desired position.

It can also interfere with proper operation of the passenger’s advanced front airbag system.

CONTINUED
A child who is at least one year old, and who fits within the child seat maker’s weight and height limits, should be restrained in a forward-facing, upright child seat.

In any of these situations, we strongly recommend that you install the child seat directly behind the front passenger’s seat, move the seat as far forward as needed, and leave it unoccupied. Or, you may wish to get a smaller rear-facing child seat.

**WARNING**

Placing a rear-facing child seat in the front seat can result in serious injury or death during a collision.

Always place a rear-facing child seat in the back seat, not the front.

Protecting Small Children

Of the different seats available, we recommend those that have a five-point harness system as shown.

We also recommend that a small child use the child seat until the child reaches the weight or height limit for the seat.

**Child Seat Type**

A child who is at least one year old, and who fits within the child seat maker’s weight and height limits, should be restrained in a forward-facing, upright child seat.
**Child Seat Placement**

We strongly recommend placing a forward-facing child seat in a back seat, not the front.

*Placing a forward-facing child seat in the front seat of a vehicle equipped with a passenger’s airbag can be hazardous.* If the vehicle seat is too far forward, or the child’s head is thrown forward during a collision, an inflating airbag can strike the child with enough force to cause very serious or fatal injuries.

Even with advanced front airbags, which can automatically turn the passenger’s front airbag off (see page 33), a back seat is the safest place for a small child.

If it is necessary to put a forward-facing child seat in the front, move the vehicle seat as far to the rear as possible, and be sure the child seat is firmly secured to the vehicle and the child is properly strapped in the seat.

**WARNING**

Placing a forward-facing child seat in the front seat can result in serious injury or death if the front airbag inflates.

If you must place a forward-facing child seat in front, move the vehicle seat as far back as possible, and properly restrain the child.
When buying a child seat, you need to choose either a conventional child seat, or one designed for use with the lower anchors and tethers for children (LATCH) system.

Conventional child seats must be secured to a vehicle with a seat belt, whereas LATCH-compatible seats are secured by attaching the seat to hardware built into the two outer seating positions in the back seat.

Since LATCH-compatible child seats are easier to install and reduce the possibility of improper installation, we recommend selecting this style.

In seating positions and vehicles not equipped with LATCH, a LATCH-compatible child seat can be installed using a seat belt.

Whatever type of seat you choose, to provide proper protection, a child seat should meet three requirements:

1. The child seat should meet U.S. or Canadian Motor Vehicle Safety Standard 213. Look for FMVSS 213 or CMVSS 213 on the box.

2. The child seat should be of the proper type and size to fit the child. Rear-facing for infants, forward-facing for small children.

3. The child seat should fit the vehicle seating position (or positions) where it will be used.

Before purchasing a conventional child seat, or using a previously purchased one, we recommend that you test the seat in the specific vehicle seating position or positions where the seat will be used.
After selecting a proper child seat and a good place to install the seat, there are three main steps in installing the seat:

1. **Properly secure the child seat to the vehicle.** All child seats must be secured to the vehicle with the lap part of a lap/shoulder belt or with the LATCH (lower anchors and tethers for children) system. A child whose seat is not properly secured to the vehicle can be endangered in a crash.

2. **Make sure the child seat is firmly secured.** After installing a child seat, push and pull the seat forward and from side-to-side to verify that it is secure.

A child seat secured with a seat belt should be installed as firmly as possible. However, it does not need to be “rock solid.” Some side-to-side movement can be expected and should not reduce the child seat’s effectiveness.

If the child seat is not secure, try installing it in a different seating position, or use a different style of child seat that can be firmly secured.

3. **Secure the child in the child seat.** Make sure the child is properly strapped in the child seat according to the child seat maker’s instructions. A child who is not properly secured in a child seat can be seriously injured in a crash.

The following pages provide guidelines on how to properly install a child seat. A forward-facing child seat is used in all examples, but the instructions are the same for rear-facing child seats.
Installing a Child Seat with LATCH

Your vehicle is equipped with LATCH (lower anchors and tethers for children) at the outer rear seats.

The lower anchors are located between the seat-back and seat bottom, and are to be used only with a child seat designed for use with LATCH.

The location of each lower anchor is indicated by a small button above the anchor point.

To install a LATCH-compatible child seat:

1. Move the seat belt buckle or tongue away from the lower anchors.

2. Make sure there are no objects near the anchors that could prevent a secure connection between the child seat and the anchors.

3. Place the child seat on the vehicle seat, then attach the seat to the lower anchors according to the child seat maker’s instructions.

Some LATCH-compatible seats have a rigid-type connector as shown above.
Installing a Child Seat

4. Whatever type you have, follow the child seat maker’s instructions for adjusting or tightening the fit.

5. Lift the head restraint (see page 139), then route the tether strap through the legs of the head restraint and over the seat-back, making sure the strap is not twisted.

If the tether strap is too long and cannot be tightened firmly, find a route where the strap can be tightened securely.

6. Attach the tether strap hook to the tether anchor, then tighten the strap as instructed by the child seat maker.

7. Push and pull the child seat forward and from side-to-side to verify that it is secure.

Other LATCH-compatible seats have a flexible-type connector as shown above.

47
Installing a Child Seat

Installing a Child Seat with a Lap/Shoulder Belt
When not using the LATCH system, all child seats must be secured to the vehicle with the lap part of a lap/shoulder belt.

In addition, the lap/shoulder belts in all seating positions except the driver’s have a lockable retractor that must be activated to secure a child seat.

1. With the child seat in the desired seating position, route the belt through the child seat according to the seat maker’s instructions, then insert the latch plate into the buckle.

2. To activate the lockable retractor, slowly pull the shoulder part of the belt all the way out until it stops, then let the belt feed back into the retractor.

3. After the belt has retracted, tug on it. If the belt is locked, you will not be able to pull it out. If you can pull the belt out, it is not locked, and you will need to repeat these steps.
After confirming that the belt is locked, grab the shoulder part of the belt near the buckle, and pull up to remove any slack from the lap part of the belt. Remember, if the lap part of the belt is not tight, the child seat will not be secure.

To remove slack, it may help to put weight on the child seat, or push on the back of the seat while pulling up on the belt.

Push and pull the child seat forward and from side-to-side to verify that it is secure enough to stay upright during normal driving maneuvers. If the child seat is not secure, unlatch the belt, allow it to retract fully, then repeat these steps.

To deactivate the lockable retractor and remove a child seat, unlatch the buckle, unroute the seat belt, and let the belt fully retract.

A child seat with a tether can be installed in any seating position in the back seat, using one of the anchorage points shown above.

Since a tether can provide additional security to the lap/shoulder belt installation, we recommend using a tether whenever one is required or available.

CONTINUED
Installing a Child Seat

Using an Outer Anchor

1. After properly securing the child seat (see page 48), lift the head restraint, then route the tether strap over the seat-back and through the head restraint legs.

If the tether strap is too long and cannot be tightened firmly, find a route where the strap can be tightened securely.

2. Lift the anchor cover, then attach the tether strap hook to the anchor, making sure the strap is not twisted.

3. Tighten the strap according to the seat maker’s instructions.

Using the Center Anchor

1. After properly securing the child seat (see page 48), route the tether strap over the seat-back.

2. Follow steps 2 and 3 from the previous column.
To determine if a lap/shoulder belt properly fits a child, have the child put on the seat belt, then ask yourself:

1. Does the child sit all the way back against the seat?

2. Do the child’s knees bend comfortably over the edge of the seat?

CONTINUED
3. Does the shoulder belt cross between the child’s neck and arm?

4. Is the lap part of the belt as low as possible, touching the child’s thighs?

5. Will the child be able to stay seated like this for the whole trip?

If you answer yes to all these questions, the child is ready to wear the lap/shoulder belt correctly. If you answer no to any question, the child needs to ride on a booster seat.

Using a Booster Seat

A child who has outgrown a forward-facing child seat should ride in a back seat and use a booster seat until the lap/shoulder belt fits them properly without the booster.

Some states and Canadian provinces also require children to use a booster seat until they reach a given age or weight (e.g., 6 years or 60 lbs). Be sure to check current laws in the states or provinces where you intend to drive.

Booster seats can be high-back or low-back. Whichever style you select, make sure the booster seat meets federal safety standards (see page 44) and that you follow the booster seat maker’s instructions.
Of course, children vary widely. And while age may be one indicator of when a child can safely ride in front, there are other important factors you should consider.

Physically, a child must be large enough for the lap/shoulder belt to properly fit (see pages 15 and 51). If the seat belt does not fit properly, with or without the child sitting on a booster seat, the child should not sit in front.

When Can a Larger Child Sit in Front
The National Highway Traffic Safety Administration and Transport Canada recommend that all children age 12 and under be properly restrained in a back seat.

If the passenger's front airbag inflates in a moderate to severe frontal collision, the airbag can cause serious injuries to a child who is unrestrained, improperly restrained, sitting too close to the airbag, or out of position.

A side airbag also poses risks. If any part of a larger child's body is in the path of a deploying side airbag, the child could receive possibly serious injuries.

A child may continue using a booster seat until the tops of their ears are even with the top of the vehicle's or booster's seat-back. A child of this height should be tall enough to use the lap/shoulder belt without a booster seat.

If a child who uses a booster seat must ride in front, move the vehicle seat as far back as possible and be sure the child is wearing the seat belt properly.

Of course, children vary widely. And while age may be one indicator of when a child can safely ride in front, there are other important factors you should consider.

Physical Size
Physically, a child must be large enough for the lap/shoulder belt to properly fit (see pages 15 and 51). If the seat belt does not fit properly, with or without the child sitting on a booster seat, the child should not sit in front.

Maturity
To safely ride in front, a child must be able to follow the rules, including sitting properly, and wearing the seat belt properly throughout a ride.
Protecting Larger Children

If you decide that a child can safely ride up front, be sure to:

- Carefully read the owner’s manual, and make sure you understand all seat belt instructions and all safety information.
- Move the vehicle seat to the rearmost position.
- Have the child sit up straight, back against the seat, and feet on or near the floor.
- Check that the child’s seat belt is properly positioned and secured.
- Supervise the child. Even mature children sometimes need to be reminded to fasten the seat belts or sit properly.

**Additional Safety Precautions**

- **Do not let a child wear a seat belt across the neck.** This could result in serious neck injuries during a crash.
- **Do not let a child put the shoulder part of a seat belt behind the back or under the arm.** This could cause very serious injuries during a crash. It also increases the chance that the child will slide under the belt in a crash and be injured.
- **Two children should never use the same seat belt.** If they do, they could be very seriously injured in a crash.
- **Do not put any accessories on a seat belt.** Devices intended to improve a child’s comfort or reposition the shoulder part of a seat belt can make the belt less effective and increase the chance of serious injury in a crash.
Your vehicle’s exhaust contains carbon monoxide gas. Carbon monoxide should not enter the vehicle in normal driving if you maintain your vehicle properly and follow the information on this page.

Have the exhaust system inspected for leaks whenever:

- The vehicle is raised for an oil change.
- You notice a change in the sound of the exhaust.
- The vehicle was in an accident that may have damaged the underside.

With the trunk open, airflow can pull exhaust gas into your vehicle’s interior and create a hazardous condition. If you must drive with the trunk open, open all the windows and set the climate control system as shown below.

If you must sit in your parked vehicle with the engine running, even in an unconfined area, adjust the climate control system as follows:

1. Select the fresh air mode.
2. Select the mode.
3. Set the fan speed to high.
4. Set the temperature control to a comfortable setting.

Avoid any enclosed areas or activities that expose you to carbon monoxide.

High levels of carbon monoxide can collect rapidly in enclosed areas, such as a garage. Do not run the engine with the garage door closed. Even with the door open, run the engine only long enough to move the vehicle out of the garage.

**WARNING**

Carbon monoxide gas is toxic. Breathing it can cause unconsciousness and even kill you.

Avoid any enclosed areas or activities that expose you to carbon monoxide.

Carbon Monoxide Hazard
These labels are in the locations shown. They warn you of potential hazards that could cause serious injury or death. Read these labels carefully.

If a label comes off or becomes hard to read (except for the U.S. dashboard label which may be removed by the owner), contact your dealer for a replacement.

Control Locations

Vehicle without navigation system is shown.
The U.S. instrument panel is shown. Differences for the Canadian models are noted in the text.
The instrument panel has many indicators to give you important information about your vehicle.

**Seat Belt Reminder Indicator**
This indicator comes on when you turn the ignition switch to the ON (II) position. It reminds you and your passengers to fasten your seat belts. A beeper also sounds if you and your front passenger have not fastened your seat belts.

If you turn the ignition switch to the ON (II) position before fastening your seat belts, the beeper sounds, and the indicator will flash. If you do not fasten your seat belts before the beeper stops, the indicator stops flashing but remains on.

If your front passenger does not fasten their seat belt, the indicator comes on about 6 seconds after the ignition switch is turned to the ON (II) position.

If either of you do not fasten your seat belt while driving, the beeper will sound and the indicator will flash again at regular intervals. For more information, see page 19. You will also see a “FASTEN SEAT BELT” or “FASTEN PASSENGER SEAT BELT” message on the multi-information display (see page 78).

**Malfunction Indicator Lamp**
You will also see a “CHECK EMISSION SYSTEM” message on the multi-information display (see page 84). For more information, see page 332.

**Low Oil Pressure Indicator**
The engine can be severely damaged if this indicator flashes or stays on when the engine is running. For more information, see page 331. You will also see a “CHECK ENGINE OIL LEVEL” message on the multi-information display (see page 82).

**Charging System Indicator**
If this indicator comes on when the engine is running, the battery is not being charged, and you will also see a “CHECK CHARGING SYSTEM” message on the multi-information display (see page 84). For more information, see page 332.
This indicator has two functions:

1. It comes on when you turn the ignition switch to the ON (II) position. It is a reminder to check the parking brake. Driving with the parking brake not fully released can damage the rear brakes, axles, and tires.

If you drive without releasing the parking brake, a beeper will sound, and you will also see a “RELEASE PARKING BRAKE” message on the multi-information display (see page 78).

2. If it stays on after you have fully released the parking brake while the engine is running, or if it comes on while driving, it can indicate a problem in the brake system. You will also see a “BRAKE FLUID LOW” or “CHECK BRAKE SYSTEM” message on the multi-information display (see pages 79, 84). For more information, see page 334.

Lights On Indicator

This indicator reminds you that the exterior lights are on. It comes on when the light switch is in either the DO or ON position. If you turn the ignition switch to the ACCESSORY (I) or the LOCK (0) position without turning off the light switch, this indicator will remain on. A reminder chime will also sound when you open the driver's door and remove the key from the ignition switch.

Supplemental Restraint System (SRS) Indicator

This indicator comes on for several seconds when you turn the ignition switch to the ON (II) position. If it comes on at any other time, it indicates a potential problem with your front airbags. This indicator will also alert you to a potential problem with your side airbags, passenger’s side airbag automatic cutoff system, automatic seat belt tensioners, side curtain airbags, driver’s seat position sensor, or the front passenger’s weight sensors. You will also see a “CHECK AIRBAG SYSTEM” message on the multi-information display (see page 83). For more information, see page 32.
Side Airbag Off Indicator
This indicator comes on when you turn the ignition switch to the ON (II) position. If it comes on at any other time, it indicates that the passenger’s side airbag has automatically shut off. You will also see a “PASSENGER SIDE AIRBAG OFF” message on the multi-information display (see page 82). For more information, see page 32.

Immobilizer System Indicator
This indicator comes on for a few seconds when you turn the ignition switch to the ON (II) position. It will then go off if you have a properly-coded ignition key. If it is not a properly-coded key, the indicator will blink and the engine will not start (see page 127).

This indicator also blinks several times when you turn the ignition switch from the ON (II) position to the ACCESSORY (I) or LOCK (0) position.

Vehicle Stability Assist (VSA) System Indicator
This indicator normally comes on for a few seconds when you turn the ignition switch to the ON (II) position.

If it comes on and stays on at any other time, or it does not come on when you turn the ignition switch to the ON (II) position, there is a problem with the VSA system. You will also see a “CHECK VSA SYSTEM” message on the multi-information display (see page 82). Take your vehicle to a dealer to have it checked. Without VSA, your vehicle still has normal driving ability, but will not have VSA traction and stability enhancement. For more information, see page 262.
VSA Activation Indicator

This indicator has three functions:

1. It comes on as a reminder that you have turned off the vehicle stability assist (VSA) system.

2. It flashes when VSA is active (see page 262).

3. It comes on along with the VSA system indicator if there is a problem with the VSA system. You will also see a "CHECK VSA SYSTEM" message on the multi-information display (see page 82).

This indicator normally comes on for a few seconds when you turn the ignition switch to the ON (II) position. For more information, see page 262.

Turn Signal and Hazard Warning Indicators

The left or right turn signal indicator blinks when you signal a lane change or turn. If an indicator does not blink or blinks rapidly, it usually means one of the turn signal bulbs is burned out (see pages 300 and 302). Replace the bulb as soon as possible, since other drivers cannot see that you are signaling.

When you press the hazard warning button, both turn signals blink. All turn signals on the outside of the vehicle should flash.

Anti-lock Brake System (ABS) Indicator

This indicator normally comes on for a few seconds when you turn the ignition switch to the ON (II) position. If this indicator comes on at any other time, there is a problem in the ABS. If this happens, take the vehicle to your dealer to have it checked. With this indicator on, your vehicle still has normal braking ability but no anti-lock function. You will also see a "CHECK ABS SYSTEM" message on the multi-information display (see page 83).

For more information, see page 255.
Instrument Panel Indicators

**High Beam Indicator**
This indicator comes on with the high beam headlights. For more information, see page 121.

On Canadian models, this indicator comes on with reduced brightness when the daytime running lights (DRL) are on (see page 122).

**Fog Light Indicator**
This indicator comes on when you turn on the fog lights. For more information, see page 122.

**Cruise Main Indicator**
This indicator comes on when you turn on the cruise control system by pressing the CRUISE button on the steering wheel (see page 204).

**Low Fuel Indicator**
This indicator is in the fuel gauge. It comes on as a reminder that you must refuel soon. You will also see a “FUEL LOW” message on the multi-information display (see page 81). When the indicator comes on, there is about 2.3 U.S. gal (8.6 L) of fuel remaining in the tank before the needle reaches E.

**System Message Indicator**
This indicator comes on when there is a system message on the multi-information display. Press the INFO button on the steering wheel (see page 71) to see the message (see page 75).

Most of the time, this indicator comes on along with other indicators in the instrument panel such as the seat belt reminder indicator, SRS indicator, VSA system indicator, etc.
This indicator comes on when the security system is set. For more information, see page 203.

**Low Tire Pressure Indicator**

This indicator normally comes on for a few seconds when you turn the ignition switch to the ON (II) position.

If it comes on while driving, it indicates that one or more of your vehicle’s tires are extremely low on pressure.

You will also see a “CHECK TIRE PRESSURE” message on the multi-information display (see page 259).

You may see one or more of the low pressure tire positions displayed along with this message.

Check the tire pressure monitor on the multi-information display and determine the cause (see page 259).

If this happens, pull to the side of the road when it is safe. If it is because of a flat tire, replace the flat tire with the compact spare (see page 321), and have the flat tire repaired as soon as possible. If two or more tires are underinflated, call a professional towing service (see page 341). For more information, see page 257.
Temperature Gauge
This shows the temperature of the engine’s coolant. During normal operation, the pointer should rise to about the middle of the gauge. In severe driving conditions, such as very hot weather or a long period of uphill driving, the pointer may rise to the upper zone. If it reaches the red (Hot) mark, pull safely to the side of the road. See page 329 for instructions and precautions on checking the engine’s cooling system.

Fuel Gauge
This shows how much fuel you have. It may show slightly more or less than the actual amount. The needle returns to the bottom after you turn off the ignition.

NOTICE
Avoid driving with an extremely low fuel level. Running out of fuel could cause the engine to misfire, damaging the catalytic converter.
The multi-information display in the instrument panel displays various information and messages when the ignition switch is in the ON (II) position. Some of the messages help you operate your vehicle more comfortably. Others help to keep you aware of the periodic maintenance your vehicle needs for continued trouble-free driving.

There are three types of messages; normal display messages, engine oil life and maintenance messages, and system messages.

You can also customize some vehicle control settings to your liking with the multi-information display and the two buttons on the steering wheel (see page 86).

**Normal Display Messages**

When you unlock and open the driver’s door with the remote transmitter, the display shows “Welcome DRIVER 1” or “Welcome DRIVER 2” depending on which remote transmitter you use. The driver’s “ID” is detected by the transmitter. For more information about driver’s “ID”, see page 132.

If you use the key to unlock the driver’s door, the display only shows “Welcome.” This means the system cannot recognize either “DRIVER 1” or “DRIVER 2.” In this case, you cannot use the customized settings on the multi-information display (see page 86).

When you turn the ignition switch to the ACCESSORY (I) position, the display shows “Goodbye.”

CONTINUED
The multi-information display consists of two segments: an upper segment and a lower segment.

In normal display mode, the upper segment displays trip computer. The lower segment displays the odometer, Trip A/B, outside temperature, and engine oil life and maintenance message.
The primary display always shows its default setting, “INST. MPG” (U.S. models) or “INST. L/100 km” (Canadian models) even if you press the INFO button. It only changes the secondary display. You can customize this setting to your liking (see page 102).

Messages in the trip computer include:
- **INST. MPG** (U.S. models)/INST.L/100 km (Canadian models): Your vehicle’s current fuel mileage.
- **AVG. FUEL A**/AVG. FUEL B: Your vehicle’s average fuel economy since you last reset the Trip A or Trip B. When you select Trip B in the lower segment by pressing the SEL/RESET button on the steering wheel or select/reset knob in the instrument panel, the AVG. FUEL B appears in the secondary display.
- **RANGE**: The estimated distance you can travel on the fuel remaining in the tank. This distance is estimated from the fuel economy you received over the last several miles, so it will vary with changes in speed, traffic, etc.
- **ELAPSED TIME**: The time traveled since you last reset the trip computer. When you turn the ignition switch to the ON (II) position, ELAPSED TIME is reset.
- **AVG. SPEED**: The average speed you are traveling.
- **TIRE PRESSURE MONITOR**: You can see the pressure of each tire in this monitor. If the tire pressure is low on one or more tires, inflate them to the correct pressure. For more information, see page 258.
You can also change the display by pushing the select/reset knob in the instrument panel.

When you turn the ignition switch to the ON (II) position, what you last selected is displayed.

**Trip Meter**

While a trip meter is displayed, you can change the display between “Trip A” and “Trip B” by pressing the SEL/RESET button on the steering wheel, or the select/reset knob in the instrument panel.

To reset a trip meter, display it, and press and hold the SEL/RESET button or select/reset knob until the number resets to “0.0.” When you reset “Trip B”, “AVG. FUEL B” is also reset. If you reset “Trip A”, “AVG. FUEL A” and “AVG. SPEED” will be reset at the same time.
Outside Temperature

This shows the outside Fahrenheit temperature in U.S. models, and Centigrade temperature in Canadian models.

The temperature sensor is in the front bumper. The temperature reading can be affected by heat reflection from the road surface, engine heat, and the exhaust from surrounding traffic. This can cause an incorrect temperature reading when your vehicle speed is under 19 mph (30 km/h). When you start your trip, the sensor is not fully acclimatized, therefore it may take several minutes until the proper temperature is displayed.

In certain weather conditions, temperature readings near freezing (32°F, 0°C) could mean that ice is forming on the road surface.

You can adjust the outside temperature display (see page 96).

Engine Oil Life

This shows the remaining life of the engine oil. It shows 100% after the engine oil is replaced and the display is reset. The engine oil life is calculated based on engine operating conditions and accumulated engine revolutions. For more information, see page 274.
When the engine oil life reaches 15%, the display shows “SERVICE DUE SOON” and the code for the maintenance items to be performed. When the engine oil life reaches 5%, the display shows “SERVICE DUE NOW” along with the same maintenance items.

Have your dealer do the indicated maintenance as soon as you see this message, and have them reset the display after completing the service. If you do not perform the indicated maintenance or do not reset the display, the message changes to “SERVICE PAST DUE” when the engine oil life becomes 0%.

These messages appear on the multi-information display each time you turn the ignition switch to the ON (II) position.

For more information about Maintenance Messages, see “Maintenance Minder” on page 274.

Also refer to page 272 for important maintenance safety precautions.
System Messages
If there is a problem with your vehicle, for example, the engine oil level is low or a door is not fully closed, the multi-information display will show you the problem. It does this by interrupting the current display with one or more messages.

The system message(s) triggers the appropriate indicator(s) on the instrument panel, including the system message indicator, to come on. The system message indicator does not go off until the problem(s) is corrected.

When there are several warnings to be shown, the system switches the messages every 5 seconds. The message is shown until you push the INFO button. To see the message again, press the INFO button, 5 seconds after the display disappears.
Here is a table which shows the possible multi-information display messages and where to find further information on each message.

If the trunk or any door is not closed tightly, the display reminds you to close the open trunk or the door(s) before you start driving.

If you start driving without releasing the parking brake, the multi-information display interrupts the current display and shows “RELEASE PARKING BRAKE.” This message continues, and a chime sounds, until you release the parking brake, or the vehicle speed slows down to less than 1.8 mph (3 km/h).

In addition to the seat belt reminder indicator in the instrument panel, the multi-information display interrupts the current display and shows “FASTEN SEAT BELT” or “FASTEN PASSENGER SEAT BELT” if either the driver or a front passenger does not fasten their seat belt while driving. This message remains displayed while the vehicle is moving until you or your passenger’s seat belts are fastened.
If you leave the key in the ignition switch in the LOCK (0) or ACCESSORY (i) position and open the driver’s door, you will see “REMOVE KEY” on the display and hear a reminder beeper.

If the brake fluid level is at or below the MIN mark on the side of the brake fluid reservoir in the engine compartment, you will see “BRAKE FLUID LOW.” If you see this message, have the brake system checked by your dealer (see page 296).

If the fuel fill cap is missing or not tightened properly, you will see “TIGHTEN FUEL CAP.” Make sure the fuel cap is installed and tightened at least one click.
Your vehicle’s on board diagnostic system will detect a loose or missing fuel fill cap as an evaporative system leak. The first time a leak is detected a “TIGHTEN FUEL CAP” message appears on the multi-information display. Turn the engine off, and confirm the fuel fill cap is installed. If it is, loosen it, then retighten it until it clicks at least once. The message should go off after several days of normal driving once the cap is tightened or replaced. If the MIL does not go off, have your vehicle inspected by a dealer. For more information, see page 332.

If the system still detects a leak in the vehicle’s evaporative emissions system, the malfunction indicator lamp (MIL) comes on. If the fuel fill cap was not already tightened, turn the engine off, and check or retighten the fuel fill cap until it clicks at least once. The MIL should go off after several days of normal driving once the cap is tightened or replaced. If the MIL does not go off, have your vehicle inspected by a dealer. For more information, see page 332.

If there is a problem in the tire pressure monitoring system (TPMS), you will see “CHECK TPMS SYSTEM” on the multi-information display. If you see this message, the TPMS is not monitoring tire pressures. Have the TPMS checked by your dealer as soon as possible (see page 260).
If the fluid level in the windshield washer reservoir gets low, you will see "WASHER FLUID LOW" on the multi-information display.

If the level of the fuel in the tank gets low, you will see "FUEL LOW" on the multi-information display, and you must refuel soon. The low fuel indicator on the instrument panel will also come on.

If one or more of your vehicle tires are low on pressure, you will see a "CHECK TIRE PRESSURE" message on the display. See page 259 for more information on the tire pressure monitoring system (TPMS).

Canadian models only
If the fluid level in the windshield washer reservoir gets low, you will see "WASHER FLUID LOW" on the multi-information display.
If the passenger’s side airbag has automatically shut off, you will see “PASSENGER SIDE AIRBAG OFF” on the multi-information display. See page 32 for more information.

If there is a problem with the vehicle stability assist (VSA) system, you will see “CHECK VSA SYSTEM” on the multi-information display. If you see this message, have the VSA system checked by your dealer (see page 262).

If the engine oil is very low or has lost pressure, you will see “CHECK ENGINE OIL LEVEL” on the multi-information display. You will also see the low oil pressure indicator in the instrument panel flashing or staying on. If you see this message, you should take immediate action since serious engine damage is possible. Follow the procedure on page 331.
If there is a problem in the anti-lock brake system (ABS), you will see "CHECK ABS SYSTEM" on the multi-information display. If you see this message, have your vehicle checked by a dealer as soon as possible.

If there is a problem with the automatic transmission, you will see "CHECK TRANSMISSION" on the multi-information display. Avoid rapid acceleration, and have the transmission checked by a dealer as soon as possible.

If there is a problem with your front airbags, side airbags, passenger’s side airbag automatic cutoff system, automatic seat belt tensioners, side curtain airbags, driver’s seat position sensor, or the front passenger’s weight sensors, you will see "CHECK AIRBAG SYSTEM" on the multi-information display. Take your vehicle to a dealer as soon as possible (see page 32).

CONTINUED
If you see “CHECK CHARGING SYSTEM” on the multi-information display, it means the battery is not being charged. See page 332 for more information.

If you see “CHECK EMISSION SYSTEM” on the multi-information display, it means one of the engine’s emission systems may have a problem. Have your vehicle checked by your dealer (see page 332).

If there is a problem with the brake system, you will see “CHECK BRAKE SYSTEM” on the multi-information display. The parking brake and brake system indicator in the instrument panel will also come on. See page 334 for more information.
Check DRL System

If there is a problem in the high beam headlight’s circuit, you will see “CHECK DRL SYSTEM” on the multi-information display. If you see this message, have your vehicle checked by your dealer.

Cruise Control

This message comes on when you set the cruise control. The Cruise Control indicator in the instrument panel will also come on. See page 204 for information on cruise control operation.

HandsFreeLink™

You can receive or make phone-calls from your cell phone through your vehicle’s HandsFreeLink (HFL) system without touching your cell phone.

To use the system, your cell phone and the HFL system must be linked. Not all cell phones are compatible with this system. Refer to page 217 for instructions on how to link your cell phone to the HFL and how to receive or make phone calls, or visit the handsfreelink.com website.
Customized Settings
With the ignition switch in the ON (II) position, press and hold the INFO button for more than 3 seconds. “CUSTOMIZE ENTRY” appears on the multi-information display.

You can customize some vehicle control settings for “DRIVER 1” and “DRIVER 2” separately.

To have the driver’s ID detected, make sure you use your transmitter to unlock the driver’s door.

If you use the key to unlock the driver’s door, the system cannot recognize either “DRIVER 1” or “DRIVER 2.” In this case, when you try to enter the customizing mode, “DRIVER UNKNOWN CUSTOMIZE IMPOSSIBLE” will be displayed, and you cannot customize some of the settings.

Refer to the table on page 88 to see what settings you can customize.
To change the settings, stop the vehicle, and make sure to set the parking brake and put the transmission in Park (A/T) or neutral (M/T). If you try to enter the customizing mode while the vehicle is moving, the above message appears and you cannot change the settings.

The first customizing menu is:
- CHANGE SETTING
- DEFAULT ALL

Every time you press the INFO button, the display cycles from “CHANGE SETTING,” “DEFAULT ALL,” “EXIT” and then back to “CHANGE SETTING.” Press the SEL/RESET button to enter your selection.

If you want the settings as they were when the vehicle left the factory, select “DEFAULT ALL,” as described on page 90.

If you want to change any vehicle control settings, select “CHANGE SETTING,” and follow the instructions on page 92.

If you do not make any changes, select “EXIT,” the display returns to normal display.

You can also use the select/reset knob in the instrument panel. Turn the knob to select a setting and press it to enter your selection.

* : Default setting
If you want to set the customizable vehicle control settings to the default setting, press the INFO button on the steering wheel until “DEFAULT ALL” is displayed.

Press the SEL/RESET button to enter “DEFAULT ALL.” You can change the display between “CANCEL,” “OK” and “EXIT” each time you press the INFO button.

If you want to cancel “DEFAULT ALL,” press the SEL/RESET button while “CANCEL” is shown. The display goes back to “CUSTOMIZE ENTRY.”

To set the default settings, press the INFO button until the display changes as shown above. Press the SEL/RESET button to select “DEFAULT ALL.”
To exit “DEFAULT ALL,” press the INFO button until you see “EXIT,” then press the SEL/RESET button.

When “DEFAULT ALL” is completed successfully, you will see the above display for several seconds, and the display will return to “CUSTOMIZE ENTRY.”

If “DEFAULT ALL” is not completed successfully, you will see the above display for several seconds, then the display goes back to “CUSTOMIZE ENTRY.” Repeat the procedure to select “DEFAULT ALL.”
Change Setting
You can customize some of the vehicle control settings to your preference. Here are the settings you can customize:

- METER SETUP
- POSITION SETUP
- LIGHTING SETUP
- DOOR/WINDOW SETUP
- WIPER SETUP

While the multi-information display is showing “CHANGE SETTING,” press the SEL/RESET button. The display will start showing the initial “CUSTOMIZE GROUP.” Each time you press the INFO button, the display changes as shown in the next column. Press the INFO button until you see the setup you want to customize, and press the SEL/RESET button to enter your selection.

- : Press SEL/RESET Button.
- : Press the INFO Button.
**Meter Setup**
There are five custom settings in the Meter Setup:

- LANGUAGE SELECTION
- ADJUST OUTSIDE TEMP. DISPLAY
- TRIP A & AVG. FUEL RESET with REFUEL
- ELAP. TIME RESET CONDITION
- PRIMARY DISP SELECTION

While “METER SETUP” is displayed, press the SEL/RESET button on the steering wheel. Then, press the INFO button repeatedly. Each time you press the INFO button, the display changes as shown.

To customize a setting, press the INFO button repeatedly until you see the setting you want to customize, and press the SEL/RESET button. Then follow the procedures described on the following pages.
While the multi-information display is showing “METER SETUP,” press the SEL/RESET button on the steering wheel. The display changes to “LANGUAGE SELECTION.” Press the SEL/RESET button again to enter the language selection mode.

There are three selectable languages, English, French, and Spanish. Each time you press the INFO button, the display changes as shown.

Select the language you want by pressing the INFO button, and press the SEL/RESET button to enter your selection.
When language selection is successfully completed, the display changes to the screen shown above for several seconds, then goes back to “CUSTOMIZE MENU.”

If you fail to select a language properly, you will see the above display for several seconds, then the display goes back to “CUSTOMIZE MENU.” Repeat the setup.

To exit “LANGUAGE SELECTION,” press the INFO button repeatedly until you see “EXIT,” then press the SEL/RESET button. The display goes back to “CUSTOMIZE MENU.”

All the messages in the multi-information display will be in the language you selected.
**Multi-Information Display**

*Adjust Outside Temp. Display*

If you find that the temperature reading is always a few degrees below or above the actual temperature, adjust it as described on the following columns.

While the multi-information display shows “METER SETUP,” press the SEL/RESET button on the steering wheel. The display changes to the “CUSTOMIZE MENU.” Press the INFO button once, and you will see “ADJUST OUTSIDE TEMP. DISPLAY” as shown above.

Press the SEL/RESET button. The display changes as shown above. The highlighted number is the current adjustment above or below the outside temperature. Press the INFO button repeatedly until the appropriate number appears, then press the SEL/RESET button to enter your selection.
If you fail to enter the desired adjustment properly, you will see the above display for several seconds, then the display goes back to “CUSTOMIZE MENU.” Repeat the adjustment.

To exit “ADJUST OUTSIDE TEMP. DISPLAY,” press the INFO button until you see “EXIT,” and press the SEL/RESET button. The display goes back to “CUSTOMIZE MENU.”

When your selection is successfully entered, you will see the above display for several seconds, and then the display goes back to “CUSTOMIZE MENU.”
Press the SEL/RESET button. The display changes as shown above. The lower segment changes between “ON” and “OFF” each time you press the INFO button. Enter your selection by pressing the SEL/RESET button.

Trip A & Avg. Fuel Reset with Refuel
To reset “Trip A” and “AVG. FUEL A” to reset every time you refuel your vehicle, follow the procedure described from the next column.

While the multi-information display shows “METER SETUP” press the SEL/RESET button on the steering wheel. The display changes to “CUSTOMIZE MENU.” Press the INFO button repeatedly until you see “TRIP A & AVG. FUEL RESET WITH REFUEL” in the lower segment as shown above.

Press the SEL/RESET button. The display changes as shown above. The lower segment changes between “ON” and “OFF” each time you press the INFO button. Enter your selection by pressing the SEL/RESET button.
When your selection is successfully entered, you will see the above display for several seconds, and then the display goes back to “CUSTOMIZE MENU.”

If you fail to enter your selection, you will see the above display for several seconds, then the display goes back to “CUSTOMIZE MENU.” Repeat the setup.

To exit “TRIP A & AVG. FUEL WITH REFUEL,” press the INFO button until you see “EXIT,” and press the SEL/RESET button. The display goes back to “CUSTOMIZE MENU.”
Elap. Time Reset Condition
“ELAPSED TIME” is the driving time since you last reset the trip computer. You can customize the condition of when to reset the “ELAPSED TIME.”

While the multi-information display shows “METER SETUP,” press the SEL/RESET button on the steering wheel. The display changes to the “CUSTOMIZE MENU.” Press the INFO button repeatedly until you see “ELAP. TIME RESET CONDITION” in the lower segment as shown above.

Press the SEL/RESET button. The display changes as shown above. The lower segment changes between “IGN RESET,” “TRIP A RESET” and “TRIP B RESET” each time you press the INFO button. Enter your selection by pressing the SEL/RESET button.
When your selection is successfully entered, you will see the above display for several seconds, and then the display goes back to “CUSTOMIZE MENU.”

If you fail to enter your selection, you will see the above display for several seconds, then the display goes back to “CUSTOMIZE MENU.” Repeat the setup.

To exit “ELAP. TIME RESET CONDITION,” press the INFO button until you see “EXIT,” and press the SEL/RESET button. The display goes back to “CUSTOMIZE MENU.”
While the multi-information display shows “METER SETUP,” press the SEL/RESET button on the steering wheel. Press the INFO button until you see “PRIMARY DISP SELECTION” as shown above.

Press the SEL/RESET button. The display changes as shown above. The lower segment changes from “INST. FUEL,” to “AVG. FUEL,” to “RANGE,” to “ELAPSED TIME,” then to “AVG. SPEED” each time you press the INFO button. Enter your selection by pressing the SEL/RESET button.

Primary Disp Selection
When you turn the ignition switch to the ON (II) position, the primary display of the trip computer always shows “INST. MPG” (U.S. models) or “INST. L/100 km” (Canadian models) in default setting. You can customize this setting to your liking in following procedure.
When your selection is successfully entered, you will see the above display for several seconds, and then the display goes back to “CUSTOMIZE MENU.”

If you fail to enter your selection, you will see the above display for several seconds, then the display goes back to “CUSTOMIZE MENU.” Repeat the setup.

To exit “PRIMARY DISP SELECTION,” press the INFO button until you see “EXIT,” and press the SEL/RESET button. The display goes back to “CUSTOMIZE MENU.”
Position Setup
If “MEMORY POSITION LINK” is “ON,” the driver’s seat moves to the position stored in the memory when you open the driver’s door, using the remote transmitter.

Refer to page 142 for setting the seat position memory. Also refer to page 132 for remote transmitter use.

While the multi-information display shows “POSITION SETUP,” press the SEL/RESET button on the steering wheel. The display changes to “MEMORY POSITION LINK” as shown above.

Press the SEL/RESET button. The display changes as shown above.

Select “ON” or “OFF” by pressing the INFO button, and enter your selection by pressing the SEL/RESET button.
If you fail to enter your selection, you will see the above display for several seconds, and the display goes back to “CUSTOMIZE MENU.” Repeat the setup.

When your selection is entered, you will see the above display for several seconds, then the display goes back to “CUSTOMIZE MENU.”

To exit “MEMORY POSITION LINK,” press the INFO button until you see “EXIT,” then press the SEL/RESET button. The display goes back to “CUSTOMIZE MENU.”
Lighting Setup
There are two custom settings in the Lighting Setup:

- INTERIOR LIGHT DIMMING TIME
- HEADLIGHT AUTO OFF TIMER

While the “LIGHTING SETUP” is displayed, press the SEL/RESET button on the steering wheel. Each time you press the INFO button, the display changes between “INTERIOR LIGHT DIMMING TIME” and “HEADLIGHT AUTO OFF TIMER.” To make your selection, press the SEL/RESET button.

Interior Light Dimming Time

The interior lights fade out when you close all doors. You can change the time that the interior lights fade out.

While the multi-information display shows “LIGHTING SETUP,” press the SEL/RESET button on the steering wheel. The display changes to “INTERIOR LIGHT DIMMING TIME” as shown above.

Press the SEL/RESET button. The display changes as shown above.

Each time you press the INFO button, the highlighted number changes from “15 sec,” to “30 sec,” and then to “60 sec.” To make your selection, press the SEL/RESET button.
If you fail to enter your selection, you will see the above display for several seconds, and the display goes back to “CUSTOMIZE MENU.” Repeat the setup.

To exit “INTERIOR LIGHT DIMMING TIME,” press the INFO button until you see “EXIT,” then press the SEL/RESET button. The display goes back to “CUSTOMIZE MENU.”

CONTINUED
While the multi-information display shows “LIGHTING SETUP,” press the SEL/RESET button on the steering wheel. Then press the INFO button to display “HEADLIGHT AUTO OFF TIMER” as shown above.

Press the SEL/RESET button. The display changes as shown above.

Each time you press the INFO button, the highlighted number changes from “0 sec,” to “15 sec,” to “30 sec,” and then to “60 sec.”

Press the INFO button repeatedly until the desired time appears, then press the SEL/RESET button to enter your selection.

When your selection is entered, you will see the above display for several seconds, and then the display goes back to “CUSTOMIZE MENU.”
The headlights, parking lights, taillights, and license plate lights turn off after the selected time when you remove the key from the ignition switch and close the driver’s door.

If you fail to enter your selection, you will see the above display for several seconds, then the display goes back to “CUSTOMIZE MENU.” Repeat the setup.

To exit “HEADLIGHT AUTO OFF TIMER,” press the INFO button until you see “EXIT,” then press the SEL/RESET button. The display goes back to “CUSTOMIZE MENU.”
Door · Window Setup

There are three custom settings in the Door · Window Setup:

- DOOR LOCK MODE
- KEYLESS LOCK
- ACKNOWLEDGEMENT
- SECURITY RELOCK TIMER

While the multi-information display shows “DOOR · WINDOW SETUP,” press the SEL/RESET button on the steering wheel. Each time you press the INFO button, the display changes as shown in the next column.

To customize a setting, press the INFO button repeatedly until you see the setting you want to customize, and press the SEL/RESET button. Then follow the procedures described on the following pages.

Press the INFO Button.
In default setting, if you push the UNLOCK button once on the remote transmitter or turn the key clockwise in the driver’s door lock, only the driver’s door unlocks.

You can select whether only the driver’s door unlocks or all the doors unlock in “DOOR LOCK MODE.”

While the multi-information display is showing “DOOR · WINDOW SETUP,” press the SEL/RESET button on the steering wheel. The display changes to “DOOR LOCK MODE” as shown above.

Press the SEL/RESET button. The display changes as shown above.

Select “DRIVER DOOR” or “ALL DOORS” by pressing the INFO button, and enter your selection by pressing the SEL/RESET button.

CONTINUED
When your selection is successfully entered, you will see the above display for several seconds, and then the display goes back to "CUSTOMIZE MENU."

If you fail to enter your selection, you will see the above display for several seconds, then the display goes back to "CUSTOMIZE MENU." Repeat the setup.

To exit "DOOR LOCK MODE," press the INFO button until you see "EXIT," then press the SEL/RESET button. The display goes back to "CUSTOMIZE MENU."
While the multi-information display shows “DOOR-WINDOW SETUP,” press the SEL/RESET button on the steering wheel. Then press the INFO button repeatedly until you see “KEYLESS LOCK ACKNOWLEDGMENT” as shown above.

Press SEL/RESET button, then press the INFO button.

Each time you press the INFO button, the display changes to “ON,” to “OFF,” then to “EXIT.”

Select “ON” or “OFF” by pressing the INFO button, and enter your selection by pressing the SEL/RESET button.

CONTINUED
When your selection is entered, you will see the above display for several seconds, and then the display changes to “CUSTOMIZE MENU.”

If you fail to enter your selection, you will see the above display for several seconds, and the display goes back to “CUSTOMIZE MENU.” Repeat the setup.

To exit “KEYLESS LOCK ACKNOWLEDGMENT,” press the INFO button until you see “EXIT,” then press the SEL/RESET button. The display goes back to “CUSTOMIZE MENU.”
Security Relock Timer

If you unlock the doors with the remote transmitter, but do not open any of the doors within 30 seconds, the doors automatically relock and the security system sets.

You can change this relock time from 30 seconds to 60 or 90 seconds.

While the multi-information display shows “DOOR-WINDOW SETUP,” press the SEL/RESET button on the steering wheel. Then press the INFO button repeatedly until you see “SECURITY RELock TIMER” as shown above.

Press the SEL/RESET button, then press the INFO button.

Each time you press the INFO button, the time changes from “30 sec,” to “60 sec,” and then to “90 sec.”

CONTINUED
Select the desired relock time by pressing the INFO button, and enter your selection by pressing the SEL/RESET button.

When your selection is entered, you will see the above display for several seconds, and then the display goes back to “CUSTOMIZE MENU.”

If you fail to enter your selection, you will see the above display for several seconds, and the display goes back to “CUSTOMIZE MENU.” Repeat the setup.

To exit “SECURITY RELOCK TIMER,” press the INFO button until you see “EXIT,” then press the SEL/RESET button. The display goes back to “CUSTOMIZE MENU.”
Wiper Setup
When “WIPER SETUP” is shown on the multi-information display, the action of the windshield wipers can be changed. To do this, refer to the following procedure.

Front Wiper Action

With “WIPER SETUP” shown on the multi-information display, press the SEL/RESET button on the steering wheel. The display changes to “FRONT WIPER ACTION” as shown above.

Press the SEL/RESET button, then press the INFO button.

Each time you press the INFO button, the display changes from “WITH VEH SPD,” to “INTERMITTENT,” and then to “EXIT.”

Press the INFO button to select “WITH VEH SPD” or “INTERMITTENT,” and enter your selection by pressing the SEL/RESET button.

CONTINUED
If you set the front wiper action to "WITH VEH SPD," the front wipers run intermittently and the wiper interval is varied automatically according to the vehicle's speed when the wiper switch is in the "INT" position. If you set it to "INTERMITTENT," the wipers run at regular intervals.

When your selection is entered, you will see the above display for several seconds, and then the display goes back to "CUSTOMIZE MENU."

If you fail to enter your selection, you will see the above display for several seconds, and the display goes back to "CUSTOMIZE MENU."

Repeat the setup.

To exit "FRONT WIPER ACTION," press the INFO button until you see "EXIT," then press the SEL/RESET button. The display goes back to "CUSTOMIZE MENU."
Only on vehicles equipped with navigation system. Refer to the navigation system manual.

To use the horn, press the pad around the “Acura” logo.

*1: To use the horn, press the pad around the “Acura” logo.

*2: Only on vehicles equipped with navigation system. Refer to the navigation system manual.
Push the right lever up or down to select a position.

**MIST** — The wipers run at high speed until you release the lever.

**OFF** — The wipers are not activated.

**INT** — The length of the wiper interval is varied automatically according to the vehicle’s speed. Vary the delay by turning the INT TIME ring. If you turn it to the shortest delay, the wiper speed will increase to low speed operation when the vehicle speed exceeds 12 mph (20 km/h).

To change the “FRONT WIPER ACTION” setting, see page 117.

**LO** — The wipers run at low speed.

**HI** — The wipers run at high speed.

**Windshield Washer** — Pull the wiper control lever toward you, and hold it. The washers spray until you release the lever. The wipers run at low speed, then complete one more sweep after you release the lever.
**Turn Signals and Headlights**

**Turn Signal** — Push down on the left lever to signal a left turn and up to signal a right turn. To signal a lane change, push lightly on the lever in the proper direction and hold it. The lever will return to center when you release it or complete a turn.

1. Turn signal
2. Off
3. Parking and indicator lights
4. Headlights
5. High beams
6. Flash high beams
7. Fog lights off
8. Fog lights on

**Headlights** — Turning the switch on the left lever to the “ ” position turns on the parking lights, taillights, instrument panel lights, side-marker lights, and rear license plate lights.

Turning the switch to the “ ” position turns on the headlights.

When the light switch is in the “ ” or the “ ” position, the Lights On indicator comes on as a reminder. This indicator stays on if you leave the light switch on and turn the ignition switch to the ACCESSORY (I) or LOCK (0) position.

If you leave the lights on with the key removed from the ignition switch, you will hear a reminder chime when you open the driver’s door.
Headlights, Automatic Lighting Off Feature, Daytime Running Lights

**High Beams** — To switch from low beams to high beams, push the left lever forward until you hear a click. The high beam indicator will come on (see page 66). Pull it back to return to low beams. To flash the high beams, pull the lever back lightly, then release it. The high beams will stay on as long as you hold the lever back.

**Fog Lights**
Turn the fog lights on and off by turning the switch next to the headlight switch.

You can use the fog lights only when the headlights are on low beam. They will go off when you turn the headlights off or onto high beam.

**Automatic Lighting Off Feature**
This feature turns off the headlights, parking lights, taillights, and license plate lights within 15 seconds of removing the key from the ignition switch and closing the driver’s door.

You can change this 15 second timer to 0, 30, or 60 seconds (see page 108).

This feature activates if you leave the headlight switch in the or position, remove the key, then open and close the driver’s door.

If you remove the key from the ignition switch with the headlight switch on, but do not open the door, the lights will turn off after 10 minutes.

The lights will turn on again when you unlock or open the driver’s door. If you unlock the door, but do not open it within 15 seconds, the lights will go off. With the driver’s door open, you will hear a lights-on reminder chime.

**Daytime Running Lights (Canadian Models)**
With the headlight switch in the off or position, the high beam headlights and the high beam indicator come on with reduced brightness when you turn the ignition switch to the ON (II) position and release the parking brake. They remain on until you turn the ignition switch off, even if you set the parking brake.
The headlights revert to normal operation when you turn them on with the switch.

If you see a “CHECK DRL SYSTEM” message on the multi-information display, there is a problem in the high beam headlight’s circuit. Take your vehicle to a dealer to have it checked.

When the multi-information display shows a “DRL OFF” message, the daytime running lights are off. Follow the procedure in the previous page to turn them on.

Instrument Panel Brightness

The Select/Reset knob on the instrument panel controls the brightness of the instrument panel lights. Turn the knob to adjust the brightness.

To reduce glare at night, the instrument panel illumination dims when you turn the light switch to ☼ or ☼. Turning the Select/Reset knob fully to the right until you hear a click will cancel the reduced brightness.
Make sure the rear window is clear and you have good visibility before starting to drive.

The defogger and antenna wires on the inside of the rear window can be accidentally damaged. When cleaning the glass, always wipe side-to-side.
Make any steering wheel adjustment before you start driving.

1. Push the lever under the steering column all the way down.

2. Move the steering wheel so it points toward your chest, not toward your face. Make sure you can see the instrument panel gauges and indicators.

3. Push the lever up to lock the steering wheel in position.

4. Make sure you have securely locked the steering wheel in place by trying to move it up, down, in, and out.

**WARNING**

Adjusting the steering wheel position while driving may cause you to lose control of the vehicle and be seriously injured in a crash.

Adjust the steering wheel only when the vehicle is stopped.
These keys contain electronic circuits that are activated by the immobilizer system. They will not work to start the engine if the circuits are damaged.

Protect the keys from direct sunlight, high temperature, and high humidity.

Do not drop the keys or set heavy objects on them.

Keep the keys away from liquids. If they get wet, dry them immediately with a soft cloth.

The keys do not contain batteries. Do not try to take them apart.

Remote Transmitter

Your vehicle also comes with two remote transmitters; see page 131 for an explanation of how to operation.

The master key fits all the locks on your vehicle. The valet key works only in the ignition and the door locks. You can keep the trunk release lever, rear seat trunk access, and glove box locked when you leave your vehicle and the valet key at a parking facility.

You should have received a key number tag with your keys. You will need this key number if you ever have to get a lost key replaced. Use only Acura-approved key blanks.

These keys contain electronic circuits that are activated by the immobilizer system. They will not work to start the engine if the circuits are damaged.

- Protect the keys from direct sunlight, high temperature, and high humidity.
The immobilizer system protects your vehicle from theft. If an improperly-coded key (or other device) is used, the engine will not start.

When you turn the ignition switch to the ON (II) position, the immobilizer system indicator should come on for a few seconds, then go off. If the indicator starts to blink, it means the system does not recognize the coding of the key. Turn the ignition switch to the LOCK (0) position, remove the key, reinsert it, and turn the ignition switch to the ON (II) position again.

The system may not recognize your key’s coding if another immobilizer key or other metal object (i.e. key fob) is near the ignition switch when you insert the key.

If the system repeatedly does not recognize the coding of your key, contact your dealer.

Do not attempt to alter this system or add other devices to it. Electrical problems could result that may make your vehicle undrivable.

If you lose your key and you cannot start the engine, contact your dealer.

As required by the FCC:
This device complies with Part 15 of the FCC rules. Operation is subject to the following two conditions: (1) This device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

Changes or modifications not expressly approved by the party responsible for compliance could void the user’s authority to operate the equipment.

This device complies with Industry Canada Standard RSS-210. Operation is subject to the following two conditions: (1) this device may not cause interference, and (2) this device must accept any interference that may cause undesired operation of the device.
The ignition switch has four positions: LOCK (0), ACCESSORY (I), ON (II), and START (III).

LOCK (0) — You can insert or remove the key only in this position. To turn the key, you must push the key in slightly. If your vehicle has an automatic transmission, the shift lever must also be in Park.

If the front wheels are turned, the anti-theft lock may make it difficult to turn the key. Firmly turn the steering wheel to the left or right as you turn the key.

ACCESSORY (I) — You can operate the audio system and the accessory power sockets in this position.

ON (II) — This is the normal key position when driving. Several of the indicators on the instrument panel come on as a test when you turn the ignition switch from the ACCESSORY (I) to the ON (II) position.

START (III) — Use this position only to start the engine. The switch returns to the ON (II) position when you let go of the key.

You will hear a reminder beeper if you leave the key in the ignition switch in the LOCK (0) or the ACCESSORY (I) position and open the driver’s door. Remove the key to turn off the beeper.

You will also see a “REMOVE KEY” message on the multi-information display (see page 79).

If your vehicle has an automatic transmission, the shift lever must be in Park before you can remove the key from the ignition switch.

**WARNING**

Removing the key from the ignition switch while driving locks the steering. This can cause you to lose control of the vehicle.

Remove the key from the ignition switch only when parked.
Each door has a lock tab on the top. Push the tab down to lock the door and pull it up to unlock.

To lock the passenger’s door when getting out of the vehicle, push the lock tab down and close the door. To lock the driver’s door, remove the key from the ignition switch and push the lock tab down or push the top of the master switch, then close the door.

All doors can be locked from the outside by using the key in the driver’s door. To unlock only the driver’s door or all doors (depending on the “DOOR LOCK MODE” setting), insert the key, turn the key, and release it. The remaining doors unlock when you turn the key a second time within a few seconds. To change this setting, see page 111.

You can open or close the windows by using the key in the driver’s door (see page 149).

Power Door Locks

Each front door has a master door lock switch. Either switch locks and unlocks all doors. On the driver’s door, push the top of the master door lock switch to lock all doors. Push the bottom to unlock them.
On the front passenger’s door, push the master door lock switch down to lock the all doors, and up to unlock them.

**Lockout Prevention**

With the driver’s door open and the key in the ignition, both master door lock switches are disabled. If you try to lock an open driver’s door by pushing in the lock tab, all doors will unlock when you close the driver’s door.

The childproof door locks are designed to prevent children seated in the rear from accidentally opening the rear doors. Each rear door has a lock lever near the edge. With the lever in the LOCK position, the door cannot be opened from inside regardless of the position of the lock tab. To open the door, pull the lock tab up, and use the outside door handle.
When the key is in the ignition switch, the functions of each button are disabled.

**LOCK** — Press this button once to lock all doors. Some exterior lights will flash. When you push LOCK twice within 5 seconds, you will hear a horn (depending on the “KEYLESS LOCK ACKNOWLEDGEMENT” setting) to verify that the doors are locked and the security system has set. The Lock button will not work this way if any door is not fully closed.

To change the “KEYLESS LOCK ACKNOWLEDGEMENT” setting, see page 113.

You can open and close all power windows from outside the vehicle with the key. With the remote transmitter, you can open the windows. Refer to Power Windows on page 149.

**UNLOCK** — Press this button once to unlock the driver’s door or all the doors (depending on the “DOOR LOCK MODE” setting). Press it twice to unlock the other doors. Some exterior lights will flash twice each time you press the button. The ceiling light (if the ceiling light switch is in the Door Activated position) will come on when you press the UNLOCK button. If you do not open any doors within 30 seconds (or whatever setting the “INTERIOR LIGHT DIMMING TIME” is set to), the light fades out. If you relock the doors with the remote transmitter before 30 seconds have elapsed, the light will go off immediately.

To change the “DOOR LOCK MODE” setting, see page 111.

CONTINUED
Remote Transmitter

To change the “INTERIOR LIGHT DIMMING TIME,” see page 106.

If you unlock the doors with the remote transmitter, but do not open any doors within 30 seconds, the doors automatically relock and the security system sets. To change this setting, refer to “SECURITY RELOCK TIMER” on page 115.

PANIC — Press this button for about 1 second to attract attention; the horn will sound and the exterior lights will flash for about 30 seconds. To cancel panic mode, press any other button on the remote transmitter, or turn the ignition switch to the ON (II) position.

TRUNK — Press this button for about 1 second to open the trunk. You cannot open the trunk if the key is in the ignition switch.

Recalling a Memorized Driving Position

Each remote transmitter also activates the Driving Position Memory System and changes the “MEMORY POSITION LINK” setting according to that remote (see page 142).
Remote Transmitter Care

- Avoid dropping or throwing the transmitter.
- Protect the transmitter from extreme temperature.
- Do not immerse the transmitter in any liquid.
- If you lose a transmitter, the replacement needs to be reprogrammed by your dealer.

Replacing the Transmitter Battery

If it takes several pushes on the button to lock or unlock the doors, replace the battery as soon as possible.

Battery type: CR2025

CONTINUED
To replace the battery:

1. Place a cloth on the edge of the transmitter, and remove the upper half by carefully prying on the edge with a small flat-tip screwdriver.

2. Remove the old battery and note the polarity. Make sure the polarity of the new battery is the same (− side facing up), then insert it in the transmitter.

An improperly disposed of battery can hurt the environment. Always confirm local regulations for battery disposal.

3. Snap the two halves of the transmitter case back together.

As required by the FCC:
This device complies with Part 15 of the FCC rules. Operation is subject to the following two conditions: (1) This device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

Changes or modifications not expressly approved by the party responsible for compliance could void the user’s authority to operate the equipment.

This device complies with Industry Canada Standard RSS-210. Operation is subject to the following two conditions: (1) this device may not cause interference, and (2) this device must accept any interference that may cause undesired operation of the device.
To close the trunk, press down on the trunk lid.

See page 239 for cargo loading and weight limit information. Keep the trunk lid closed at all times while driving to avoid damaging the lid, and to prevent exhaust gas from getting into the interior. See Carbon Monoxide Hazard on page 55.

To protect items in the trunk when you need to give the key to someone else:

1. Lock the trunk release lever with the master key. Also make sure the rear seat is not folded down (see page 140).
2. Give the person the valet key.

You can open the trunk in any of three ways:

- Pull up on the trunk release lever located to the left of the driver’s seat.
- Press and hold the trunk release button on the remote transmitter.
- If the doors are unlocked, press the trunk release switch on the trunk lid.
As a safety feature, your vehicle has a release lever on the trunk latch so the trunk can be opened from the inside.

To open the trunk, push the release lever to the left.

Parents should decide if their children should be shown how to use this feature.

For more information about child safety, see page 40.

To protect items in the trunk, you can disable the trunk-release switch on the trunk lid by turning off the trunk main switch in the glove box and locking the glove box. Make sure the rear seat is not folded down.

If you need to give the key to someone else, give them the valet key.
In the HI setting, the heater turns off when the seat gets warm, and turns back on after the seat’s temperature drops.

In the LO setting, the heater runs continuously. It does not cycle with temperature changes.

Follow these precautions whenever you use the seat heaters:

- Use the HI setting only to heat the seats quickly, because it draws large amounts of current from the battery.
- If the engine is left idling for an extended period, do not use the seat heaters even on the LO setting. It can weaken the battery, causing hard starting.

Both front seats are equipped with seat heaters. The passenger seat is only heated in the seat bottom because of the side airbag off system.

The ignition switch must be in the ON (II) position to use them. Push the front of the switch, HI, to rapidly heat up the seat. After the seat reaches a comfortable temperature, select LO by pushing the back of the switch. This will keep the seat warm.
Seats

Power Seat Adjustment
See pages 12 – 14 for important safety information and warnings about how to properly position seats and seat-backs.

The controls for the power adjustable front seats are on the outside edge of each seat bottom. You can adjust the seats with the ignition switch in any position. Make all seat adjustments before you start driving.

Moving the long horizontal switch adjusts the seat bottom in several directions. The seat bottom adjusts in the direction you move the switch. The short vertical switch adjusts the seat back angle.

Driver’s seat only:
Moves the whole seat up and forward, or down and backward. The front of the seat also tilts up or down at the same time.

Adjusts the seat-back angle forward or backward.

Moves the seat forward and backward.

Driver’s seat only:
Moves the front of the seat up or down.

Driver’s seat only:
Raises or lowers the seat.
Driver’s Lumbar Support

To change the lumbar support, move the lever on the right side of the seat-back forward or backward. Keep moving the lever forward or backward until you find a suitable position.

Head Restraints

See page 14 for important safety information and a warning about how to properly position the head restraints.

Your vehicle has adjustable head restraints on the front seats and on the outside positions of the rear seat.

The head restraints help protect you and your passengers from whiplash and other injuries. They are most effective when you adjust them so the back of the occupant’s head rests against the center of the restraint. A taller person should adjust the restraint as high as possible.

The head restraints adjust for height. You need both hands to adjust the restraint. Do not attempt to adjust it while driving. To raise it, pull upward. To lower the restraint, push the release button sideways, and push the restraint down.

CONTINUED
Folding Rear Seat
The back of the rear seat folds down to give you direct access to the trunk. Each side folds down separately. With only half the seat folded, you can still carry a passenger in the back seat. The seat-back can be released from inside the vehicle or inside the trunk.

To fold down either side of the seat-back from inside the vehicle, insert the master key in the lock on the rear shelf. To fold down the driver's side, turn the key clockwise, pull down the top of the seat-back, then release the key. To fold down the passenger’s side, turn the key counterclockwise and perform the same procedure.

To remove a head restraint for cleaning or repair, pull it up as far as it will go. Push the release button and pull the restraint out of the seat-back.
Make sure that the folded seat-back does not interfere with the front passenger’s seat-back. This will cause the front passenger’s weight sensors to work improperly (see page 28). Also check the passenger airbag off indicator to assure proper operation of the passenger’s advanced front airbag.

Make sure all rear shoulder belts are positioned in front of the rear seat-back, and the center shoulder belt is re-positioned in the guide whenever the seat-back is in its upright position. Be sure there are no twists in the center shoulder belt.

When storing cargo, you can move the rear center shoulder belt out of the way by removing the belt from the guide.

To release the seat-back from inside the trunk, pull the release loop under the trunk panel. Push the seat-back down, then let go of the release.

To lock the seat-back upright, push it firmly against the trunk panel. Make sure it is latched in place by pulling on the top of the seat.
Do not put any heavy items on the seat-back when it is folded down.

Make sure all items in the trunk, or items extending through the opening into the back seat, are secured. Loose items can fly forward and cause injury if you have to brake hard. See *Carrying Cargo* on page 238.

Never drive with the seat-back folded down and the trunk lid open. See *Carbon Monoxide Hazard* on page 55.

### Driving Position Memory System

Your vehicle has a memory feature for the driver’s seat position.

Two seat positions can be stored in separate memories. You select a memorized position by pushing the appropriate button or appropriate remote transmitter (Driver 1 or Driver 2).

This setting can be linked or unlinked with the remote transmitter.

To customize the setting “MEMORY POSITION LINK”, see page 104.

### Storing a Driving Position in Memory

Store a driving position only when the vehicle is parked.

1. Turn the ignition switch to the ON (II) position. You cannot add a new driving position to the memory unless the ignition switch is in the ON (II) position. You can recall a memorized position with the ignition switch in any position.

2. Adjust the seat to a comfortable position (see page 138).
To select a memorized position, do this:

1. Make sure the parking brake is set (M/T) or the shift lever is in Park (A/T).

2. Press the desired memory button (1 or 2) until you hear a beep.

CONTINUED
Driving Position Memory System

The system will move the driver’s seat to the memorized position. The indicator in the selected memory button will flash during movement. When the adjustment is complete, you will hear two beeps, and the indicator will stay on.

Notes for vehicles with M/T
• You cannot select a memorized position if the transmission is in reverse. Shift to another gear, then select a position.
• If the parking brake is not set, you must press and hold the memory button until the adjustment is complete.

Any of these actions will stop the system’s automatic seat adjustment:
• Pressing either memory button or the MEMO button on the driver’s door.
• Pressing any of the seat adjustment switches.
• Shifting out of Park (A/T), or into reverse (M/T).

If desired, you can use the adjustment switches to change the seat position after it is in its memorized position. If you change the memorized position, the indicator in the memory button will go out. To keep this seat position for later use, you must store it in the driver’s seat position memory.
Keep the inside and outside mirrors clean and adjusted for best visibility. Be sure to adjust the mirrors before you start driving.

The inside mirror can automatically darken to reduce glare. To turn on this feature, press the button on the bottom of the mirror. The AUTO indicator comes on as a reminder. When it is on, the mirror darkens when it senses the headlights of a vehicle behind you, then returns to normal visibility when the lights are gone. Press the button again to turn off this sensing.
Mirrors

Adjusting the Power Mirrors

1. Turn the ignition switch to the ON (II) position.

2. Turn the adjustment knob to L (driver’s side) or R (passenger’s side).

3. Push or pull the adjustment knob right, left, up, or down to move the mirror.

4. When you finish, turn the adjustment knob to the center (off) position. This turns off the adjustment knob to keep your settings.

Power Mirror Heaters

The outside mirrors are heated to remove fog and frost. With the ignition switch in the ON (II) position, turn on the heaters by pressing the button. The indicator in the button comes on as a reminder. Press the button again to turn the heaters off.
To open the driver's window, push the window switch firmly down, then release it. To stop the window from going all the way down, pull back on the window switch briefly.

To close the driver's window fully, pull back the window switch firmly, then release it. To stop the window from going all the way up, push down on the window switch briefly. If the MAIN switch is pushed down (OFF), the passenger windows cannot be raised or lowered. Keep the MAIN switch off when you have children in the vehicle so they do not injure themselves by operating the windows unintentionally.

**WARNING**

Closing a power window on someone's hands or fingers can cause serious injury.

Make sure your passengers are away from the windows before closing them.

Turn the ignition switch to the ON (II) position before operating any of the window switches. To open a window, push the switch down and hold it. To close the window, pull the switch up and hold it. Release the switch to stop the window.

**AUTO** — To open the driver's window, push the window switch firmly down, then release it. To stop the window from going all the way down, pull back on the window switch briefly.

To close the driver's window fully, pull back the window switch firmly, then release it. To stop the window from going all the way up, push down on the window switch briefly.

To open or close the driver's window partially, push down or pull back on the window switch lightly and hold it. The window will stop when you release the switch.

*CONTINUED*
AUTO REVERSE — If the driver’s window senses any obstacle while it is closing automatically, it will reverse direction, and then stop. To close the window, remove the obstacle, then use the window switch again.

Auto reverse stops sensing when the window is almost closed. You should always check that all passengers and objects are away from the window before closing it.

If your vehicle’s battery is disconnected or goes dead, or the driver’s window fuse is removed, the AUTO function may be disabled. If the AUTO function is disabled, the power window system will need to be reset after reconnecting the battery or installing the fuse.

1. Start the engine. Push down and hold the driver’s window switch until the window is fully open.

2. Pull and hold the driver’s window switch to close the window completely, then hold the switch for about 2 seconds.

If the power windows do not operate properly after resetting, have your vehicle checked by your dealer.

The power window system has a key-off delay function. The windows will still operate for up to 10 minutes after you turn off the ignition switch. Opening either front door cancels the delay function. You must turn the ignition switch to the ON (II) position again before you can raise or lower the windows.
Power Windows

**Opening the Windows with the Remote Transmitter**
You can open all of the windows from the outside with the remote transmitter.

1. Press the UNLOCK button once to unlock the driver’s door (depending on the “DOOR LOCK MODE” setting).

2. Press the UNLOCK button a second time, and hold it. The passenger’s doors unlock, and all four windows start to open. To stop the windows, release the button.

3. To open the windows further, press the button again (within 10 seconds).

You cannot close the windows with the remote transmitter.

---

**Opening/Closing the Windows with the Key**

You can open and close the windows with the key in the driver’s door lock.

To open:
1. Insert the key in the driver’s door lock.

2. Turn the key clockwise, then release it.

To close:
3. Turn the key clockwise again, and hold it. All four windows start to open. To stop the windows, release the key.

4. To open the windows further, turn and hold the key again (within 10 seconds).

To close:
1. Insert the key in the driver’s door lock.

2. Turn the key counterclockwise, then release it.

3. Turn the key counterclockwise again, and hold it. All four windows start to close. To stop the windows, release the key.

4. To close the windows further, turn and hold the key again (within 10 seconds).
To tilt up the back of the moonroof, press and hold the center button ( ). To close the moonroof, press and hold the upper part of the switch ( ). To open the moonroof, press and hold the lower part of the switch ( ). Release the switch when the moonroof gets to the desired position. Make sure everyone’s hands are away from the moonroof before opening or closing it.

The moonroof has two positions: it can be tilted up in the back for ventilation, or it can be slid back into the roof. Use the switch under the left dashboard vent to operate the moonroof. The ignition switch must be in the ON (II) position.

The moonroof has a key-off delay function. You can still open and close the moonroof for up to 10 minutes after you turn off the ignition switch. The key-off delay function cancels as soon as you open either front door. You must then turn the ignition switch to the ON (II) position to operate the moonroof.

**WARNING**

Opening or closing the moonroof on someone’s hands or fingers can cause serious injury.

Make sure all hands and fingers are clear of the moonroof before opening or closing it.

**NOTICE**

If you try to open the moonroof in below-freezing temperatures, or when it is covered with snow or ice, you can damage the moonroof panel or motor.
If you drive without releasing the parking brake, a beeper will sound, and you will also see a “RELEASE PARKING BRAKE” message on the multi-information display (see page 78).

**NOTICE**

*Driving the vehicle with the parking brake applied can damage the rear brakes and hubs. A beeper will sound if the vehicle is put into gear with the parking brake on.*

To apply the parking brake, pull the lever up fully. To release it, pull up slightly, push the button, and lower the lever. The parking brake indicator on the instrument panel should go out when the parking brake is fully released (see page 63).
To use the sun visor, pull it down. You can also use the sun visor at the side window. Remove the support rod from the clip and swing the sun visor toward the side window.

To use the vanity mirror on the back of the sun visor, pull up the cover. The lights come on when you pull up the cover.
The rear ceiling light has a three-position switch. In the OFF position, the light does not come on. In the Door Activated position, the ceiling light comes on when you open any door. After all doors are closed tightly, the light fades out in about 30 seconds. In the ON position, the ceiling light stays on continuously.

The front ceiling lights have a two-position switch. In the Door Activated position, the lights come on when you open any door. In the OFF position, the lights do not come on.

In the Door Activated position, the light comes on when you:
- Open any door.
- Remove the key from the ignition switch.
- Unlock the doors with the key, lock tab on the driver’s door, master door lock switch, or remote transmitter.

After all doors are closed tightly, the light dims slightly, then fades out in about 30 seconds.

If you leave any door open without the key in the ignition switch, the ceiling light will go off after 3 minutes.

To change the “INTERIOR LIGHT DIMMING TIME,” see page 106.

Turn on the front ceiling lights by pushing the lens. Push the lens again to turn it off. You can use these lights at all times.
The courtesy light between the spotlight comes on when you turn the parking lights on. To adjust its brightness, turn the select/reset knob on the instrument panel.

Individual Interior Lights
The courtesy lights in the front doors and around the ignition switch come on when you open any door, remove key from the ignition switch, or unlock the driver’s door.

After all doors are closed tightly, the light dims slightly, then fades out in about 30 seconds.

To change the “INTERIOR LIGHT DIMMING TIME,” see page 106.
Interior Convenience Items

- Console compartment/accessory power socket
- Front door pocket/beverage holder
- Center pocket
- Glove box
- Center armrest/beverage holders
- Utility pocket/accessory power socket
- Trunk
- Beverage holders
**Beverage Holders**

Be careful when you are using the beverage holders. A spilled liquid that is very hot can scald you or your passengers. Liquid can also spill from the door pocket beverage holders when you close the doors. Use only resealable containers in the door pockets.

Spilled liquids can damage the upholstery, carpeting, and electrical components in the interior.

**Accessory Power Sockets**

To use the accessory power socket, pull up the cover. The ignition switch must be in the ACCESSORY (I) or ON (II) position.

These sockets are intended to supply power for 12 volt DC accessories that are rated 120 watts or less (10 amps).

None of the sockets will power an automotive type cigarette lighter element. When both sockets are being used, the combined power rating of the accessories should be 120 watts or less (10 amps).
To open the console compartment, pull up on the right lever and lift the armrest.

To close, lower the armrest, and push it down until it latches.

You can put small items in the tray located in the console compartment lid. To use the tray, pull up on the left lever and lift up the armrest.

The tray in the console compartment has a coin holder.
Open the glove box by pulling the handle to the left. Close it with a firm push. Lock or unlock the glove box with the master key.

The glove box light comes on when the parking lights are on.

An open glove box can cause serious injury to your passenger in a crash, even if the passenger is wearing the seat belt.

Always keep the glove box closed while driving.

To open the sunglasses holder, push on the front edge. Make sure the holder is closed while you are driving.
The climate control system in your vehicle provides a comfortable driving environment in all weather conditions.

The standard audio system has many features. This section describes those features and how to use them.

Your vehicle has an anti-theft audio system that requires a code number to enable it.

The security system helps to discourage vandalism and theft of your vehicle.

CONTINUED
Proper use of the climate control system can make the interior dry and comfortable, and keep the windows clear for best visibility.

For the climate control system to provide heating and cooling, the engine must be running.

You can adjust the temperatures of the driver’s side and the passenger’s side independently (see page 167).

Voice Control System

*On vehicles with navigation system*

The climate control system for your vehicle can also be operated using the voice control system. See the Navigation section in your Quick Start Guide for an overview of this system and the Navigation System manual for complete details.

Automatic Operation

The automatic climate control system adjusts the fan speed and airflow levels to maintain the interior temperature you select.

*On vehicles without navigation system*

1. Press the AUTO button. You will see AUTO in the display.
   
   2. Set the desired temperature by pushing ▲ or ▼ on the driver’s side temperature control bar. The selected temperature will show in the upper display.
On vehicles with navigation system
In AUTO mode, the vehicle’s interior temperature is independently regulated for the driver and passenger. If the driver’s side of the vehicle is getting too much sun, the system will adjust to a lower temperature.

1. Press the AUTO button. The indicator in the button comes on.

2. Set the desired temperature by pushing ▲ or ▼ on the driver’s side temperature control bar. The selected temperature will show in the upper display.

When you push the passenger’s side temperature control bar, the indicator in the DUAL button comes on and the driver’s side and passenger’s side temperature can be controlled independently (see page 167).

The system automatically selects the proper mix of conditioned and/or heated air that will, as quickly as possible, raise or lower the interior temperature to your preference.

When you set the temperature to its lowest limit (LO) or its highest limit (HI), the system runs at full cooling or heating only. It does not regulate the interior temperature.

In cold weather, the fan will not come on automatically until the heater starts to develop warm air.

Semi-automatic Operation
You can manually select various functions of the climate control system when it is in the AUTO mode. All other features remain automatically controlled.

On vehicles without navigation system
Making any manual selection causes the word AUTO in the display to go out.

On vehicles with navigation system
Press the A/C button to view the A/C manual control display. Making any manual selection causes the indicator in the AUTO button to turn off.
Climate Control System

Fan Control
On vehicles without navigation system
Select the fan speed by pressing the fan control bar (↑ or ↓). The fan speed is represented by vertical bars in the display.

On vehicles with navigation system
Press the A/C button to view the A/C manual control display. Touch the fan control icons to the desired speed.

Temperature Control
To adjust the desired temperature, push ↑ or ↓ on the temperature control bar.

Dual Button
Press the DUAL button to select dual temperature control mode (see page 167). The indicator in the DUAL button comes on.

When you press the DUAL button again (indicator turns off), both side temperature is adjusted by turning the driver's side temperature dial.

Air Conditioning (A/C) Button/Icons
On vehicles without navigation system
Press the A/C button to turn the air conditioning on and off. You will see A/C ON or A/C OFF in the display.

On vehicles with navigation system
Press the A/C button to view the A/C manual control display. Touching ON or OFF icon in the display turns the air conditioning on and off.

When you turn the A/C off, the system cannot regulate the inside temperature if you set the temperature control below the outside temperature.
This button turns the windshield defrost on and off. When you push this button, air flows from the defroster vents at the base of the windshield, and the system automatically switches to fresh air mode and turns on the A/C. When the indicator in the button is on, the passenger’s temperature cannot be set separately from the driver’s.

Windshield Defroster Button

The system should be left in fresh air mode under almost all conditions. Keeping the system in recirculation mode, particularly with the A/C off, can cause the windows to fog up. Switch to recirculation mode when driving through dusty or smoky conditions, then return to fresh air mode.

Recirculation Button

When the indicator in the button is on, air from the vehicle’s interior is sent throughout the system again. When the indicator is off, air is brought in from the outside of the vehicle (fresh air mode).

The outside air intakes for the climate control system are at the base of the windshield. Keep this area clear of leaves and other debris.

Rear Window Defogger Button

This button turns the rear window defogger off and on (see page 124).
Climate Control System

Mode Control
Use the mode control buttons or icons to select the vents the air flows from. Some air flows from the dashboard corner vents in all modes.

On vehicles with navigation system
Press the A/C button to view the A/C manual control display, then touch any of the mode icons on the display.

Air flows from the center and corner vents in the dashboard.

Airflow is divided between the vents in the dashboard and the floor vents.

Air flows from the floor vents.

Airflow is divided between the floor vents and the defroster vents at the base of the windshield.

To Turn Everything Off
If you press the OFF button, the climate control system shuts off completely.

- Keep the system off for short periods only.
- To keep stale air and mustiness from collecting, you should have the fan running at all times.

On vehicles with navigation system
When the climate control system is turned off, the temperature in the upper display will also turn off.

To keep stale air and mustiness from collecting, you should have the fan running at all times.
Your vehicle has two temperature control bars, one for the driver, and one for the passenger.

The driver’s side and the passenger’s side can be controlled independently by adjusting these bars when the green indicator in the DUAL button is lit.

**Temperature Control Bars**
To set the driver’s side temperature to a different value than the passenger’s, press the DUAL button, then press the temperature control bars (▲ or ▼ side) on the driver’s side. To set the passenger’s side to a different value than the driver’s, press the temperature control bars (▲ or ▼ side) on the passenger’s side. You can adjust the passenger’s side without pressing the DUAL button first.
When you set the temperature to its lower or upper limit, it is displayed as $H$ or $L$.

Push AUTO or $M}. The selected temperatures appear in the upper display. For vehicles with navigation system when the indicator in the DUAL button is off, you can adjust both sides to the same temperature by adjusting the driver’s side temperature control bar (↑ or ↓ side).
The climate control system has two sensors. A sunlight sensor is in the top of the dashboard, and a temperature sensor is next to the steering column. Do not cover the sensors or spill any liquid on them.
Playing the AM/FM Radio

Without navigation system

AM/FM BUTTON  STEREO INDICATOR
SCAN BUTTON

VOL/PWR KNOB  PRESET BUTTONS  TUNE/SOUND KNOB

U.S. model is shown.
Playing the AM/FM Radio

With navigation system

U.S. model is shown.
You can use any of five methods to find radio stations on the selected band: TUNE, SEEK, SCAN, the preset buttons or icons, and AUTO SELECT.

Pushing the AUDIO DISPLAY button will also turn on the system. The band and frequency that the radio was last tuned to is displayed. To change bands, press the FM/AM button. On the FM band, ST will be displayed if the station is broadcasting in stereo. Stereo reproduction on AM is not available.

TUNE — Use the TUNE/SOUND knob to tune the radio to a desired frequency. Turn the knob right to tune to a higher frequency, and turn the knob left to tune to a lower frequency.

SEEK — The SEEK function searches up and down from the current frequency to find a station with a strong signal. To activate it, press the or side of the SEEK/SKIP bar, then release it.

To Select a Station
You can use any of five methods to find radio stations on the selected band: TUNE, SEEK, SCAN, the preset buttons or icons, and AUTO SELECT.

---

Voice Control System
On vehicles with navigation system
The audio system for your vehicle can also be operated using the voice control system. See the Navi section in your Quick Start Guide for an overview of this system, and the Navigation System manual for complete details.

On vehicles with navigation system
Pushing the AUDIO DISPLAY button will also turn on the system.

The ignition switch must be in the ACCESSORY (I) or the ON (II) position. Turn the system on by pushing the VOL/PWR knob or the AM/FM button. Adjust the volume by turning the same knob.

On vehicles with navigation system
Pushing the AUDIO DISPLAY button will also turn on the system.

On U.S. models
XM satellite radio information is available on page 179.
The preset frequencies may be lost if your vehicle’s battery goes dead, is disconnected, or the radio fuse is removed.

3. Pick the preset number (1 — 6) you want for that station. Press the button or icon and hold it until you hear a beep.

4. Repeat steps 1 through 3 to store a total of six stations on AM and twelve stations on FM.

The preset frequencies may be lost if your vehicle’s battery goes dead, is disconnected, or the radio fuse is removed.

On vehicles with navigation system

To use the SCAN, preset and A.SEL function, press the AUDIO DISPLAY button to view these icons.

SCAN — The SCAN function samples all stations with strong signals on the selected band. To activate it, press the SCAN button, or touch the SCAN icon (models with navigation system), then release it. You will see SCAN in the display. The system will scan for a station with a strong signal. When it finds one, it will stop and play that station for about 5 seconds.

If you do nothing, the system will then scan for the next strong station and play it for 5 seconds. When it plays a station you want to listen to, press the SCAN button or touch the SCAN icon again.

1. Select the desired band, AM or FM. FM1 and FM2 let you store two frequencies with each preset button or icon.

2. Use the TUNE, SEEK, or SCAN function to tune the radio to a desired station.

Preset — Each preset button or icon can store one frequency on AM, and two frequencies on FM.
**AUTO SELECT** — If you are traveling far from home and can no longer receive your preset stations, you can use the auto select feature to find stations in the local area.

Press the A. SEL button or touch the A. SEL icon. A. SEL will appear in the display, and the system will go into scan mode for several seconds. It stores the frequencies of six AM, and twelve FM stations in the preset buttons (1 – 6) or icons. You will see a "0" displayed after pressing a preset button or icon if Auto Select cannot find a strong station for every preset button or icon.

If you do not like the stations Auto Select has stored, you can store other frequencies on the preset buttons or icons. Use the TUNE, SEEK, or SCAN function to find stations, then store them in the preset buttons or icons as described previously.

To turn off Auto Select, press the A.SEL button or touch the A.SEL icon. This restores the presets you originally set.
Bass, Treble, Balance, and Fader are each adjustable.

**Balance/Fader** — These two modes adjust the strength of the sound coming from each speaker. BAL adjusts the side-to-side strength, while FAD adjusts the front-to-back strength.

**Treble/Bass** — Use the TRE/BAS modes to adjust the tone to your liking.

*On vehicles without navigation system*

You select which of these you want to adjust by pressing the TUNE/SOUND knob. The mode changes from BASS to TREBLE to FADER to BALANCE, and then back to the selected audio mode, each time you press the knob. Turn the knob to adjust the setting to your liking. When the level reaches the center, you will see “” in the display.

The system will automatically return the display to the selected audio mode about 5 seconds after you stop adjusting a mode.

*On vehicles with navigation system*

If you want to adjust the sound while the radio or CD is playing, push the AUDIO DISPLAY button and then push the TUNE/SOUND knob or touch the SOUND icon in the display. The current setting is shown on the display.

CONTINUED
You select which of these you want to adjust by pressing the TUNE/SOUND knob. The mode changes from BASS to TREBLE to FADER to BALANCE, and then back to the selected audio mode, each time you press the button. You can also select the mode by touching the adjustment bar on the display directly.

To adjust the TREBLE and BASS, touch + or − on each side of the TREBLE or BASS adjustment bar. The adjustment bar shows you the current setting.

The Left/Right BALANCE adjusts the side-to-side strength, while Front/Rear FADER adjust the front-to-back strength. To adjust the Left/Right BALANCE, touch the “L” or “R” icon. To adjust the Front/Rear FADER, touch the “FR” or “RR” icon.

The system will automatically return the display to the selected audio mode about 5 seconds after you stop adjusting a mode.
Radio Frequencies
The radio can receive the complete AM and FM bands. Those bands cover these frequencies:

AM band: 530 to 1,710 kHz
FM band: 87.7 to 107.9 MHz

Radio stations on the AM band are assigned frequencies at least 10 kHz apart (530, 540, 550). Stations on the FM band are assigned frequencies at least 0.2 MHz apart (87.9, 88.1, 88.3). Stations must use these exact frequencies. It is fairly common for stations to round-off the frequency in their advertising, so your radio could display a frequency of 100.9 even though the announcer may identify the station as “FM101.”

Radio Reception
How well the radio receives stations is dependent on many factors, such as the distance from the station’s transmitter, nearby large objects, and atmospheric conditions.

A radio station’s signal gets weaker as you get farther away from its transmitter. If you are listening to an AM station, you will notice the sound volume becoming weaker, and the station drifting in and out. If you are listening to an FM station, you will see the stereo indicator flickering off and on as the signal weakens. Eventually, the stereo indicator will go off and the sound will fade completely as you get out of range of the station’s signal.

Driving very near the transmitter of a station that is broadcasting on a frequency close to the frequency of the station you are listening to can also affect your radio’s reception. You may temporarily hear both stations, or hear only the station you are close to.

CONTINUED
Radio signals, especially on the FM band, are deflected by large objects such as buildings and hills. Your radio then receives both the direct signal from the station’s transmitter, and the deflected signal. This causes the sound to distort or flutter. This is a main cause of poor radio reception in city driving.

Radio reception can be affected by atmospheric conditions such as thunderstorms, high humidity, and even sunspots. You may be able to receive a distant radio station one day and not receive it the next day because of a change in conditions.

Electrical interference from passing vehicles and stationary sources can cause temporary reception problems.

As required by the FCC:
Changes or modifications not expressly approved by the party responsible for compliance could void the user’s authority to operate the equipment.
Satellite Digital Radio
U.S. Models only
Your vehicle is capable of receiving XM® Satellite Radio anywhere in the United States, except Hawaii and Alaska. XM® is a registered trade mark of XM Satellite Radio, Inc.

XM Satellite Radio receives signals from two satellites to produce clear, high-quality digital reception. It offers many channels in several categories. Along with a large selection of different types of music, XM Satellite Radio also allows you to view channel and category selections in the audio display.
Playing the XM® Satellite Radio (U.S. Models)

Operating the XM Radio
To listen to the XM satellite Radio, turn the ignition switch to the ACCESSORY (I) or ON (II) position. Push the VOL/PWR knob to turn on the audio system, and press the XM button. Adjust the volume turning the VOL/PWR knob. The last channel you listened to will show in the display.

**On vehicles with navigation system**
To operate the XM Radio, Press the AUDIO DISPLAY button to view the XM Radio control display.

**MODE** — To switch between the category mode and channel mode, press and hold the DISP/MODE button until the mode changes. On models with navigation system, touch the MODE icon on the display. In channel mode, you can select all of the available channels. In category mode, such as Jazz, Rock, Classical, etc., you can select all of the channels within that category.

**DISPLAY** — Each time you press and release the DISP/MODE button, the display changes in the following sequence: Channel name, category, artist name, and music title.

To Select a Channel
When in the satellite radio mode, you can use any of four methods to find channels: TUNE, SEEK/SKIP (CATEGORY), SCAN, and the preset bars.

**TUNE** — Turn the TUNE knob to change channel selections. Turn the knob right for higher numbered channels and left for lower numbered channels. In the category mode, you can only select channels within that category.
SEEK/SKIP (CATEGORY) —
Press either side of the CATEGORY bar ( 或 ) to select another category.

SCAN — The scan function gives you a sampling of all channels while in the channel mode. In the category mode, only the channels within that category are scanned. To activate scan, press the SCAN button or touch the SCAN icon on the screen. The system plays each channel in numerical order for a few seconds, then selects the next channel. When you hear a channel you want to listen to, press the button or touch the icon again.

Preset — You can store up to 12 preset channels using each side of the preset bar or preset icons on the screen. Each side of the bar stores one channel from the XM1 band and one channel from the XM2 band.

To store a channel:
1. Press the XM button. Either XM1 or XM2 will show in the display.
2. Use the tune, seek, or scan function to tune to a desired channel.

In category mode, only channels within that category can be selected. In channel mode, all channels can be selected.

3. Pick a preset number (icon) you want for that channel. Press and hold the bar (icon) until you hear a beep.

4. Repeat steps 2 and 3 to store the first six channels.

5. Press the XM button again or touch the other XM icon (XM1 or XM2) on the audio display. Store the next six channels using steps 2 and 3.

Once a channel is stored, press and release the proper side of the preset bar (icon) to tune to it.

CONTINUED
Satellite Radio receives signals from two satellites to produce clear, high-quality digital reception. It offers many channels in several categories. Along with a large selection of different types of music, satellite radio also allows you to view channel and category selections in the audio display.

The XM satellites are in orbit over the equator; therefore, objects south of the vehicle may cause satellite reception interruptions. To help compensate for this, ground-based repeaters are placed in major metropolitan areas. Satellite signals are more likely to be blocked by tall buildings and mountains the farther north you travel from the equator.
Depending on where you drive, you may experience reception problems. Interference can be caused by any of these conditions:

- Driving on an east/west road with a mountain on the south side of the road.
- Driving on the north side of a large commercial truck on an east/west road.
- Driving in tunnels.
- Driving on a road beside a vertical wall, steep cliff, or hill to the south of you.
- Driving on the lower level of a multi-tiered road.
- Driving on a single lane road alongside dense trees taller than 50 ft. (15 m) to the south of you.

There may be other geographic situations that could affect satellite radio reception.

As required by the FCC: Changes or modifications not expressly approved by the party responsible for compliance could void the user’s authority to operate the equipment.

**Receiving Satellite Radio Service**

If your XM Radio service has expired or you purchased your vehicle from a previous owner, you can listen to a sampling of the broadcasts available on XM Satellite Radio. With the ignition switch in the ACCESSORY (I) or ON (II) position, push the VOL/PWR knob to turn on the audio system and press the CD/AUX XM button. A variety of music types and styles will play.

If you decide to purchase XM satellite radio service, contact XM Radio at www.xmradio.com or at 1-800-852-9696. You will need to give them your radio I.D. number and your credit card number.

**To get your XM Satellite radio ID number:**

Turn the TUNE knob until “0” appears in the display. Your I.D. will appear in the display.

After you have registered with XM Radio, keep your audio system in the SAT Radio mode while you await activation. This should take about 30 minutes.

While awaiting activation, make sure your vehicle remains in an open area with good reception. Once your audio system is activated, “category” or “CH” will appear on the display and you will be able to listen to XM Radio broadcasts. XM Radio will continue to send an activation signal to your vehicle for at least 12 hours from activation request. If the service has not been activated after 36 hours, contact XM Radio.

If your XM Radio service has expired or you purchased your vehicle from a previous owner, you can listen to a sampling of the broadcasts available on XM Satellite Radio. With the ignition switch in the ACCESSORY (I) or ON (II) position, push the VOL/PWR knob to turn on the audio system and press the CD/AUX XM button. A variety of music types and styles will play.
Auxiliary Input Jack

Your audio system will accept auxiliary inputs from a portable cassette player, MP3 player, etc.

To use the jack, turn down the volume of the portable unit, and pivot the cover up, then plug in a mini-jack cable between the portable unit and the jack. You will see AUX in the display and the system automatically switches to AUX mode. To adjust the volume, turn the VOL/PWR knob.

To take the system out of AUX mode, press the AM/FM, or CD/AUX or CD/AUX/XM (U.S. models only) button. To return to AUX mode while the jack is connected, press the CD/AUX or CD/AUX/XM button.

Operating the CD Changer
Your audio system has an in-dash CD changer that holds up to six CDs, providing several hours of continuous entertainment. You operate this CD changer with the same controls used for the radio. To load CDs or operate the CD changer, the ignition switch must be in the ACCESSORY (I) or ON (II) position.

**NOTICE**

*Do not use CDs with adhesive labels. The label can curl up and cause the CD to jam in the unit.*

For best results when using CD-R or CD-RW discs, use only high quality discs labeled for audio use. When recording a CD-R or CD-RW, the recording must be closed in order for the disc to be played by the CD player.

Loading CDs in the Changer
To load multiple discs in one operation:
1. Press the LOAD button until you hear a beep and see “LOAD” on the display.
   
   To load only one CD, press and release the LOAD button.

2. The disc number for an empty position is highlighted and the red light starts blinking.

3. Insert the disc into the CD slot when the green CD load indicator comes on. Insert it only about halfway; the drive will pull it in the rest of the way. You will see “BUSY” on the display as the CD load indicator turns red and blinks as the CD is loaded.

4. When the CD load indicator turns green and “LOAD” appears on the display again, insert the next CD in the slot.

5. Repeat steps 1 through 3 until all six positions are loaded. If you are not loading all six positions, the system begins playing the last CD loaded.

You cannot load and play 3-inch (8-cm) discs in this system.
Playing Discs

If you are not loading CDs into all six positions, press the LOAD button again after the last CD has loaded. The system will begin playing the last CD loaded.

If you stop loading discs before all six positions are filled, the system will wait for 15 seconds, stop the load operation, and begin playing the last disc loaded.

You can also load a CD into an empty position while a CD is playing. Select the empty position (the disc number indicator is not highlighted) and press the appropriate preset bar or touch a disc icon. The current CD stops playing and starts the loading sequence. The CD just loaded will play.

To Play a CD
Select the CD changer by pressing the CD button. You will see “CD” on the display. The system will begin playing the last selected CD in the CD changer. You will see the disc and track numbers displayed.

When that CD ends, the next CD in the CD changer is loaded and played. After the last CD finishes, the system returns to the first CD.

To select a different disc, press an appropriate preset button (1-6) or use the Preset 5 (DISC −) to select the previous disc or Preset 6 (DISC +) to select the next disc in sequence. On vehicles with navigation system, touch the appropriate disc icon or press the ▲ or ▼ side of the CH/DISC bar. If you select an empty position in the CD changer, the system will try to load the CD in the next available slot.
SEEK/SKIP — Each time you press and release the side of the SEEK/SKIP bar, the system skips forward to the beginning of the next track. Press and release the side of the bar to skip backward to the beginning of the current track. Press it again to skip to the beginning of the previous track.

To move rapidly within a track, press and hold the side or side of the SEEK/SKIP bar.

On vehicles without navigation system

The available CD functions are described as follows.

REPEAT — To activate the repeat feature, press and release the RPT button. You will see RPT on the display as a reminder. The system continuously replays the current track. Press the RPT button again to turn it off. Pressing either of the SKIP bar also turns off the repeat feature.

DISC REPEAT — Press and hold the RPT button to continuously replay the current CD. You will see D-RPT on the display as a reminder. Press the button again to turn it off.

RANDOM — The RANDOM function plays the tracks within a CD in random order, rather than in the order they are recorded on the CD. To activate it, press the RDM button. You will see RDM on the display as a reminder. The system will then select and play tracks randomly. This continues until you deactivate RANDOM by pressing the RDM button again.

SCAN — The SCAN function samples all the tracks on the selected disc in the order they are recorded on the CD. To activate it, press and release the SCAN button. You will see SCAN on the display as a reminder. The system will then play the first track for approximately 10 seconds. If you do nothing, the system will then play the following tracks for 10 seconds each. When it plays a track that you want to continue listening to, press the SCAN button again.
DISC SCAN — This feature, when activated, samples the first track of all the discs in the CD changer in the order they are stored. To activate the DISC SCAN feature, press and hold the SCAN button. You will see D-SCAN on the display as a reminder. The system will then play the first track of the first CD for approximately 10 seconds. If you do nothing, the system will then play the next CD’s first track. When it plays a disc that you want to continue listening to, press the SCAN button again.

On vehicles with navigation system
Press the AUDIO DISPLAY button to view the available CD control icons on the display. The icon functions are described as follows.

TRACK SCAN — This function samples all the tracks on the selected disc in the order they are recorded on the CD. To activate it, touch the TRACK SCAN icon or press and release the SCAN button. You will see SCAN on the left side of TRACK icon on the display as a reminder. SCAN also appears on the upper display. The system will then play the first track for approximately 10 seconds. If you do nothing, the system will then play the following tracks for 10 seconds each. When it plays a track that you want to continue listening to, touch the TRACK SCAN icon or press the SCAN button again.
DISC SCAN — This function samples the first track of all the discs in the CD changer in the order they are stored. To activate it, touch the DISC SCAN icon or press and hold the SCAN button. You will see SCAN on the left side of the DISC icon on the display as a reminder. D-SCAN also appears on the upper display. The system will then play the first track of the first CD for approximately 10 seconds. If you do nothing, the system will then play the next CD’s first track. When it plays a disc that you want to continue listening to, touch the DISC SCAN icon or press the SCAN button again.

TRACK REPEAT — Touch the TRACK REPEAT icon to continuously replay a track. You will see REPEAT on the left side of the TRACK icon on the display as a reminder. RPT also appears on the upper display. Press the icon again to turn it off.

DISC REPEAT — Touch the DISC REPEAT icon to continuously replay the current CD. You will see REPEAT on the left side of the DISC icon. D-RPT also appears on the upper display. Press the icon again to turn it off.

TRACK RANDOM — The TRACK RANDOM function plays the tracks within a CD in random order, rather than in the order they are recorded on the CD. To activate it, press the TRACK RANDOM icon. You will see RANDOM on the left side of the TRACK icon on the display as a reminder. The system will then select and play tracks randomly. This continues until you deactivate TRACK RANDOM by touching the TRACK RANDOM icon again.
Playing Discs

To Stop Playing a CD
If you turn off the system while a CD is playing, either by pushing the VOL/PWR knob or by turning off the ignition, the CD will stay in the drive. When you turn the system back on, it will begin at the same disc and track.

To take the system out of CD mode, press the AM/FM or CD/AUX, or CD/AUX/XM button to switch to the radio or satellite radio (U.S. models only), or optional tape player (if a tape is loaded) while a CD is playing. When you return to CD mode by pressing the CD/AUX or CD/AUX/XM button, play will continue at the same point that it left off.

Removing CDs from the Changer
To remove the disc that is currently playing, press and release the eject ( △ ) button. You will see EJECT in the display. When you remove the disc from the slot, the system begins the load sequence so you can load another disc in that position. If you do not load another CD within 15 seconds, the system selects the previous mode [AM, FM1, FM2, or XM Radio (U.S. models)].

If you do not remove the CD from the slot, the system will reload the CD after 15 seconds and put the CD changer in pause mode. To begin playing the CD, press the CD button.

To remove a different CD from the changer, first select it with the appropriate preset button, or the appropriate icon or CH/DISC bar. When that CD begins playing, press the eject button.

After that disc is ejected, pressing the eject button again will eject the next disc in numerical order. By doing this six times, you can remove all the CDs from the changer.

If you press the eject button while listening to the radio, or with the audio system turned off, the disc that was last selected is ejected.

In any mode, if you press the eject button and hold it until you hear a beep, the system will eject all of the discs in the changer.

You can also eject discs when the ignition switch is off by pressing the eject button. The disc that was last selected is ejected first. You can eject up to 5 discs, one at a time.
The chart on the right explains the error messages you may see in the display while playing a disc.

If you see an error message in the display while playing a disc, press the eject button. After ejecting the disc, check it for damage or deformation. If there is no damage, insert the disc again.

If there is still a problem, the error message will reappear. Press the eject button, and pull out the disc. Insert a different disc. If the new disc plays, there is a problem with the first disc. If the error message cycle repeats and you cannot clear it, take your vehicle to a dealer.

General Information
- When using CD-R discs, use only high quality CDs labeled for audio use.
- When recording a CD-R, the recording must be closed for it to be used by the system.
- Play only standard round CDs. Odd-shaped CDs may jam in the drive or cause other problems.
- Handle your CDs properly to prevent damage and skipping. See this page.

Protecting CDs
When a CD is not being played, store it in its case to protect it from dust and other contamination. To prevent warpage, keep CDs out of direct sunlight and extreme heat.

To clean a CD, use a clean soft cloth. Wipe across the CD from the center to the outside edge.

A new CD may be rough on the inner and outer edges. The small plastic pieces causing this roughness can flake off and fall on the recording surface of the CD, causing skipping or other problems. Remove these pieces by rubbing the inner and outer edges with the side of a pencil or pen.

Never try to insert foreign objects in the CD player or the magazine.

Handle a CD by its edges; never touch either surface. Do not place stabilizer rings or labels on the CD. These, along with contamination from fingerprints, liquids, and felt-tip pens, can cause the CD to not play properly or possibly jam in the drive.

U.S. model is shown.
Playing a Tape (Optional)

To Play a Tape
The ignition switch must be in the ACCESSORY (I) or ON (II) position. Make sure the open side of the tape is facing right, then insert the tape most of the way into the slot. The system will pull the tape in the rest of the way, and begin to play it.

The tape direction indicator will light to show you which side of the tape is playing. The ▲ indicates the side you inserted upward is now playing. If you want to play the other side, press the Preset 3 (PLAY/PROG) or press the AUDIO DISPLAY button and touch either ▼ or ▲ icon. When the player reaches the end of the tape, it will automatically reverse direction and play the other side.

Dolby* noise reduction turns on when you insert a tape. The ▲ indicator will light in the display. If the tape was not recorded in Dolby, turn it off by pressing the Preset 4 (NR) or touching the NR icon. Dolby remains off until you press the preset button or the icon again.

*Dolby noise reduction manufactured under license from Dolby laboratories licensing Corporation. “Dolby” and the double-D symbol are trademarks of the Dolby Laboratories Licensing Corporation.

To Stop Playing a Tape
If you turn the system off while a tape is playing, either with the VOL/PWR knob or by turning off the ignition, the cassette will remain in the drive. When you turn the system back on, the tape will begin playing where it left off.

To switch to the radio or CD player while a tape is playing, press the AM/FM, or CD/AUX button or CD/AUX XM button. To change back to the tape player, push the CD/AUX button or CD/AUX XM button.
Playing a Tape (Optional)

**Tape Search Functions**

**SKIP** — Each time you press and release the \( \text{\textbullet}\text{\textbullet}\) side of the SEEK/SKIP bar, the player skips forward to the beginning of the next track. On vehicles without navigation system, you will see FF in the display. Press and release the \( \text{\textbullet}\text{\textbullet}\) side of the SKIP bar to skip backward to the beginning of the current track. On vehicles without navigation system, you will see REW in the display.

**On vehicles without navigation system**

**FF/REW** — To rewind the tape, push the Preset 1 (REW). You will see REW in the display. To fast forward the tape, push the Preset 2 (FF). You will see FF displayed. Press the Preset 1, 2, or 3 (PLAY/PRG) to take the system out of rewind or fast forward.

**REPEAT** — Press the RPT button to continuously play a track or passage. You will see RPT displayed. The track will repeat until you press the RPT button again.

**On vehicles with navigation system**

Press the AUDIO DISPLAY button to view the available tape control icons on the display. The icon functions are described as follows.

**FF/REW** — To rewind the tape, touch the REW icon. To fast forward the tape, touch the FF icon. Press either \( \text{\textbullet}\text{\textbullet}\) or \( \text{\textbullet}\text{\textbullet}\) icon to take the system out of fast forward or rewind.

**REPEAT** — Touch the REPEAT icon to continuously replay a track. You will see REPEAT displayed. The track will repeat until you touch the REPEAT icon again.

**NOTE:** The skip and repeat functions use silent periods on the tape to find the end of a song or passage. These features may not work if there is almost no gap between selections, a high noise level, or a silent period in the middle of a selection.

If you see the error message “TAPE ERR” on the display, press the tape eject button to remove the tape from the unit. Make sure the tape is not damaged. If the tape will not eject or the error message stays on after the tape ejects, take your vehicle to your dealer.
If the tape is loose, tighten it by turning the hub with a pencil or your finger. If the label is peeling off, remove it or it could cause the tape to jam in the player. Never try to insert a warped or damaged tape in the player.

Caring for the Tape and Player
The tape player picks up dirt and oxides from the tape. This contamination builds up over time and causes the sound quality to degrade. To prevent this, you should clean the player after every 30 hours of use.

Use 100-minute or shorter tapes. Tapes longer than that may break or jam in the drive.

If you do not clean the tape player regularly, it may eventually become impossible to remove the contamination with a normal cleaning kit. Your dealer has a cleaning kit available.

If the tape is loose, tighten it by turning the hub with a pencil or your finger. If the label is peeling off, remove it or it could cause the tape to jam in the player. Never try to insert a warped or damaged tape in the player.

Store tapes in their cases to protect them from dust and moisture. Never place tapes where they will be exposed to direct sunlight, high heat, or high humidity. If a tape is exposed to extreme heat or cold, let it reach a moderate temperature before inserting it into the player.

Never try to insert foreign objects into the tape player.

If you do not clean the tape player regularly, it may eventually become impossible to remove the contamination with a normal cleaning kit. Your dealer has a cleaning kit available.
The VOL button adjusts the volume up (▲) or down (▼). Press the top or bottom of the button, hold it until the desired volume is reached, then release it.

The MODE button changes the mode. Pressing the button repeatedly selects FM1, FM2, AM, CD (if a CD is loaded), or a tape (if equipped). On models with satellite radio system, you can also select XM1 and XM2.

If you are listening to the radio, use the CH button to change stations. Each time you press the top (+) of the button, the system goes to the next preset station on the band you are listening to. Press the bottom (−) to go back to the previous station.

If you are playing a CD, the system skips to the beginning of the next track each time you press the top (+) of the CH button. Press the bottom (−) to return to the beginning of the current track. Press it twice to return to the previous track. You will see the disc and track numbers on the display.

If you are playing a tape in the optional tape player, press the top (+) of the CH button to advance to the next selection. Press the bottom (−) to go back to the previous selection. The system senses a silent period, then resumes playing.

Three controls for the audio system are mounted in the steering wheel hub. These let you control basic functions without removing your hand from the wheel.
Your vehicle’s audio system will disable itself if it is disconnected from electrical power for any reason. To make it work again, you must enter a specific digit code using the preset buttons (icon on vehicle’s with navigation system). Because there are hundreds of number combinations possible from specific digits, making the system work without knowing the exact code is nearly impossible.

You should have received a card that lists your audio system code number and serial number. It is best to store this card in a safe place at home. In addition, you should write the audio system’s serial number in this owner’s manual.

If you lose the card, you must obtain the code number from a dealer. To do this, you will need the system’s serial number.

If the code card is lost, a dealer can access your code with your radio’s serial number. To access the serial number, turn the radio on. It must display “CODE”, then turn the radio off. Push the preset 1, preset 6, and power buttons at the same time, then quickly release.

You will have to store your favorite stations on each side of the preset buttons (1 – 6) after the system begins working. Your original settings were lost when power was disconnected.

If your vehicle’s battery is disconnected or goes dead, the audio system will disable itself. If this happens, you will see “CODE” on the frequency display the next time you turn on the system. Use the preset buttons (icons on vehicles with navigation system) to enter the five-digit code. The code is on the radio code card included in your owner’s manual kit. When it is entered correctly, the radio will start playing.

If you make a mistake entering the code, do not start over; complete the five-digit sequence, then enter the correct code. You have 10 tries to enter the correct code. If you are unsuccessful in 10 attempts, you must then leave the system on for 1 hour before trying again.

Radio Theft Protection
For example:
- 1:06 would RESET to 1:00.
- 1:52 would RESET to 2:00.

On vehicles with navigation system
Refer to the navigation system owner’s manual to set up the time.

On vehicles without navigation system
If your vehicle’s battery is disconnected or goes dead, you may need to set the clock.

To set or change the time, press and hold the TUNE/SOUND knob until you hear a beep. The displayed time begins to blink. Press on the H (Preset 4) until the numbers advance to the desired time. Change the minutes by pressing the M (Preset 5) until the numbers advance to the desired time. When you are finished, press the TUNE/SOUND knob again to set the time.

You can quickly set the time to the nearest hour. If the time displayed is before the half hour, press and hold the TUNE/SOUND knob, then press the R (Preset 6) to set the time back to the previous hour.

If the time displayed is after the half hour, the same procedure sets the time forward to the beginning of the next hour.
The security system helps to protect your vehicle and valuables from theft. The horn sounds and a combination of headlights, parking lights, side marker lights and taillights flash if someone attempts to break into your vehicle or remove the radio. This alarm continues for 2 minutes, then the system resets. To reset an alarming system before the 2 minutes have elapsed, unlock the driver’s door with the key or use the remote transmitter.

The security system automatically sets 15 seconds (depending on the “SECURITY RELOCK TIMER” setting) after you lock the doors, hood, and trunk. For the system to activate, you must lock the doors from the outside with the key, lock tab, door lock switch, or remote transmitter. The security system indicator in the instrument panel starts blinking immediately to show you the system is setting itself.

Once the security system is set, opening any door (without using the key or the remote transmitter), the hood, or the trunk will cause it to sound. It also sounds if the radio is removed from the dashboard or the wiring is cut.

With the system set, you can still open the trunk with the remote transmitter without triggering the alarm. The alarm will sound if the trunk lock is forced, or the trunk is opened with the trunk release handle or the emergency trunk opener.

The security system will not set if the hood, trunk, or any door is not fully closed. Before you leave the vehicle, make sure the doors, trunk, and hood are securely closed.

**NOTE:** To see if the system is set after you exit the vehicle, press the LOCK button on the remote transmitter within 5 seconds. If the system is set, the horn will beep once.

Do not attempt to alter this system or add other devices to it.
Cruise Control

Cruise control allows you to maintain a set speed above 25 mph (40 km/h) without keeping your foot on the accelerator pedal. It should be used for cruising on straight, open highways. It is not recommended for city driving, winding roads, slippery roads, heavy rain, or bad weather.

**WARNING**

Improper use of the cruise control can lead to a crash.

Use the cruise control only when traveling on open highways in good weather.

Using Cruise Control

1. Push the cruise control master button on the steering wheel. The CRUISE MAIN indicator in the instrument panel comes on.

2. Accelerate to the desired cruising speed above 25 mph (40 km/h).

3. Press and release the SET/DECEL button on the steering wheel. The “CRUISE CONTROL” message appears on the multi-information display to show the system is now activated.
Cruise control may not hold the set speed when you are going up and down hills. If your speed increases going down a hill, use the brakes to slow down. This will cancel cruise control. To resume the set speed, press the RES/ACCEL button. The “CRUISE CONTROL” message on the multi-information display will come back on.

**Changing the Set Speed**

You can increase the set cruising speed in any of these ways:

- Press and hold the RES/ACCEL button. When you reach the desired cruising speed, release the button.
- Push on the accelerator pedal. Accelerate to the desired cruising speed and press the SET/DECEL button.
- To increase the speed in very small amounts, tap the RES/ACCEL button. Each time you do this, your vehicle will speed up about 1 mph (1.6 km/h).
- Tap the brake or clutch pedal lightly with your foot. The “CRUISE CONTROL” message on the multi-information display goes out. When the vehicle slows to the desired speed, press the SET/DECEL button.

Even with cruise control turned on, you can still use the accelerator pedal to speed up for passing. After completing the pass, take your foot off the acceleration pedal. The vehicle will return to the set cruising speed.

You can decrease the set cruising speed in any of these ways:

- Press and hold the SET/DECEL button. Release the button when you reach the desired speed.
- To slow down in very small amounts, tap the SET/DECEL button repeatedly. Each time you do this, your vehicle will slow down about 1 mph (1.6 km/h).
- Resting your foot on the brake or clutch pedal causes cruise control to cancel.
Cruise Control

Canceling Cruise Control
You can cancel cruise control in any of these ways:

- Tap the brake or clutch pedal.
- Push the CANCEL button on the steering wheel.
- Push the cruise control master button.

Resuming the Set Speed
When you push the CANCEL button, or tap the brake or clutch pedal, the system remembers the previously set cruising speed. To return to that speed, accelerate to above 25 mph (40 km/h) then press and release the RES/ACCEL button. The “CRUISE CONTROL” message on the multi-information display comes on, and the vehicle accelerates to the same cruising speed as before.

Pressing the cruise control master button turns the system off and erases the previous cruising speed.
The HomeLink® universal transceiver built into your vehicle can be programmed to operate up to three remotely controlled devices around your home, such as garage doors, lighting, or home security systems.

**General Information**

If you are training HomeLink to operate a garage door or gate, you should unplug the motor for that device during training. Repeatedly pressing the remote control button could burn out the motor.

HomeLink stores the code in a permanent memory. There should be no need to retrain HomeLink if your vehicle’s battery goes dead or is disconnected. If your garage door opener was manufactured before April 1982, you may not be able to program HomeLink to operate it. They do not have the safety feature that causes the motor to stop and reverse if an obstacle is detected during closing, increasing the risk of injury.

**Important Safety Precautions**

Always refer to the opening instructions and safety information that came with your garage door opener or other equipment you intend to operate with HomeLink. If you do not have this information, contact the manufacturer of the equipment.

For quick and accurate training, make sure the remote transmitter for the device (garage door, automatic gate, security system, etc.) has a fresh battery.

**Training HomeLink**

**Before you begin** — If you just received your vehicle and have not trained any of the buttons in HomeLink before, you should erase any previously learned codes before training the first button.

To do this, press and hold the two outside buttons on the HomeLink transceiver for about 20 seconds, until the red indicator flashes. Release the buttons, then proceed to step 1.

If you are training the second or third buttons, go directly to step 1.

1. Unplug the garage door opener motor from the electrical outlet.

2. Hold the end of the garage door opener remote 2 to 5 inches from HomeLink. Make sure you are not blocking your view of the red indicator in HomeLink.
Plug in the garage door opener motor, then test the HomeLink button by pushing it for about 1 second. If the button works, programming is complete. If the button does not work go to step 6.

Press and hold the remote transmitter button and one of the HomeLink buttons at the same time. If the red indicator in HomeLink begins to flash slowly at first, then rapidly, release both buttons, and go to step 5.

4. Press and hold the remote transmitter button and one of the HomeLink buttons at the same time. While continuing to hold the HomeLink button, press and release the remote transmitter button every 2 seconds. If the red indicator in HomeLink begins to flash slowly at first, then rapidly, release both buttons, and go to step 5. If the red indicator in HomeLink continues to flash slowly (does not begin to flash rapidly), repeat steps 2 thru 4.

5. Plug in the garage door opener motor, then test the HomeLink button by pushing it for about 1 second.

3. Press and hold the remote transmitter button and one of the HomeLink buttons at the same time. If the red indicator in HomeLink begins to flash slowly at first, then rapidly, release both buttons, and go to step 5.

If the red indicator in HomeLink continues to flash slowly (does not flash rapidly), your remote transmitter may stop transmitting after a short time. Go to step 4.

6. Push and hold the HomeLink button for a few seconds, then watch the red indicator on HomeLink. If the indicator stays on or flashes slowly, repeat steps 2 thru 5. If the indicator flashes rapidly for 2 seconds then stays on, you have a rolling code transmitter: go to “Training with a Rolling Code System” (see page 209).

7. Repeat these steps to train the other two HomeLink buttons to operate any other compatible remotely controlled devices around your home (lighting, automatic gate, security system, etc.).
For security purposes, newer garage door opening systems use a “rolling” or variable code. Information from the remote control and the garage door opener is needed before HomeLink can operate the garage door opener.

The “Training HomeLink” procedure trains HomeLink to the proper garage door opener code. The following procedure synchronizes HomeLink to the garage door opener so it sends and receives the correct codes.

1. Make sure you have properly completed the “Training HomeLink” procedure.
2. Find the “training” button on your garage door opener unit. The location will vary, depending on the manufacturer.
3. Press the training button on the garage door opener unit until the indicator next to the button comes on. The indicator may blink, or come on and stay on. You then have approximately 30 seconds to complete the following steps.
4. Press and hold the button on HomeLink for 3 to 4 seconds.
5. Press and hold the HomeLink button again for 3 to 4 seconds. This should turn off the training indicator on the garage door opener unit. (Some systems may require you to press the button up to three times.)
6. Press the HomeLink button again for about 1 second. It should operate the garage door.
Erasing Codes
To erase the codes stored in all three buttons, press and hold the two outside buttons until the red indicator begins to flash, then release the buttons.

You should erase all three codes before selling the vehicle.

Retraining a Button
If you want to retrain a programmed button for a new device, you do not have to erase all button memory. You can replace the existing memory code using this procedure:

1. Press and hold the HomeLink button to be trained until the HomeLink indicator begins to flash slowly.
   - If a rolling code transmitter was previously programmed, the indicator will flash rapidly for 2 seconds, and then stay on for about 23 seconds.
   - If a standard transmitter was programmed, the indicator will stay on for about 25 seconds.

2. Once the HomeLink indicator begins to flash slowly, continue to hold the HomeLink button, and follow steps 3 thru 6 under “Training HomeLink” (see page 207).

Customer Assistance
If you have problems with training the HomeLink Universal Transceiver, or would like information on home products that can be operated by HomeLink, call (800) 355-3515. On the Internet, go to www.homelink.com.

HomeLink® is a registered trademark of Johnson Controls, Inc.

As required by the FCC:
This device complies with Part 15 of the FCC rules. Operation is subject to the following two conditions: (1) This device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

Changes or modifications not expressly approved by the party responsible for compliance could void the user’s authority to operate the equipment.

This device complies with Industry Canada Standard RSS-210. Operation is subject to the following two conditions: (1) this device may not cause interference, and (2) this device must accept any interference that may cause undesired operation of the device.
Your vehicle is equipped with the HandsFreeLink (HFL). HFL uses Bluetooth® technology as a wireless link between it and your Bluetooth® compatible cellphone. When you are in your vehicle and your phone is linked to the HFL, you’ll enjoy hands-free phone use. The HFL is available in both English and French (Canadian models only). To change the language, see page 226.

Here are the main features of the HFL. Instructions for using the HFL begin on page 221.

Voice Control
HFL recognizes simple voice commands, such as phone numbers and names. It uses these commands to automatically dial, receive, and store numbers. For more information on voice control, see Using Voice Control on page 214.

Bluetooth® Wireless Technology
Bluetooth® is a registered trademark of Bluetooth SIG, Inc.

Bluetooth is the wireless technology that links your phone to the HFL. The HFL uses a Class 2 Bluetooth, which means the maximum range between your phone and vehicle is 30 feet (10 meters).

To use the HFL, your phone must have approved Bluetooth capability along with the Hands Free Profile. This type of phone is available through many phone makers and cellular carriers. You can also find an approved phone by visiting handsfreelink.com. (In Canada, visit www.acura.ca.) or by calling the Hands Free Link customer support at (888) 528-7876.

Incoming/Outgoing Calls
With a linked phone, the HFL allows you to send and receive calls in your vehicle without holding the phone.

Phonebook
The HFL can store up to 50 names and phone numbers in its phonebook. With a linked phone, you can then automatically dial any name or number in the phonebook.

Microphone
The HFL microphone is on the ceiling, between the front map lights and the console buttons. On models with navigation system, the microphone is shared with the navigation system.
Audio System
When the HFL is in use, the sound comes through the vehicle’s front audio system speakers. If the audio system is in use while operating either of the HFL buttons or making a call, the HFL over-rides the audio system. To change the volume level, use the audio system volume knob.

HFL Buttons
- HFL Talk: This button is used before you give a command, to answer incoming calls, and to confirm system information. Press and release the button, then wait for a beep before giving a command.
- HFL Back: This button is used to end a call, go back to the previous voice control command, and to cancel an operation.

To operate the HFL, use the HFL Talk and Back buttons on the left side of the steering wheel. Below the HFL buttons is another set of voice control buttons for the navigation, climate control, and audio systems.
Multi-Information Display

- **Signal Strength** — Indicates the network signal strength of the current phone. Five bars equals full strength.
- **ROAM Status** — Indicates your phone is roaming.
- **Battery Level Status** — Indicates the power currently remaining in your phone’s battery. Five bars equals full battery strength.
- **HFL Mode** — Indicates when you are dialing and receiving calls.
- **Phone Dialing** — Indicates the number you entered or the number of the incoming call.

Some phones do not send this information to the HFL.

**NOTE:** All phones may not operate identically, and some may cause inconsistent operation of the HFL.

**How to Use the HFL**
The HFL is operated by the HFL Talk and Back buttons on the left side of the steering wheel. The next few pages provide instructions for all basic features of the HFL.
Using Voice Control

Here are some guidelines for using voice control:

- To enter a command, press and release the Talk button. Then, after the beep, say your command in a clear, natural tone.
- Close the windows and the moonroof.
- Adjust the air flow from both the dashboard and side vents so they do not blow against the microphone on the ceiling.
- After pressing the Talk button, wait for the beep, then give a voice command.
- Give a voice command in a clear natural speaking voice without pausing between words or numbers. If the system cannot recognize your command because of the background noise, speak louder.
- If the microphone picks up voices other than yours, the system may not interpret your voice commands correctly.
- If the HFL does not recognize a command, its response is, “Pardon.” If it doesn’t recognize the command a second time, its response is, “Please repeat.” If it doesn’t recognize the command a third time, it plays the Help prompt.
- To hear a list of available options at any time, press the Talk button, wait for the beep, and say, “Hands free link help.”
- Many commands can be spoken together. For example, you can say, “Dial 123-456-7891.”
- To enter a string of numbers in a Call or Dial command, you can say them all at once, or you can separate them in blocks of 3, 4, 7, 10, or 11.
- To skip a voice prompt, press the Talk button while the HFL is speaking. The HFL will then begin listening for your next command.

Close the windows and the moonroof.

To enter a command, press and release the Talk button. Then, after the beep, say your command in a clear, natural tone.

Adjust the air flow from both the dashboard and side vents so they do not blow against the microphone on the ceiling.

After pressing the Talk button, wait for the beep, then give a voice command.

Give a voice command in a clear natural speaking voice without pausing between words or numbers. If the system cannot recognize your command because of the background noise, speak louder.

If the microphone picks up voices other than yours, the system may not interpret your voice commands correctly.

If the HFL does not recognize a command, its response is, “Pardon.” If it doesn’t recognize the command a second time, its response is, “Please repeat.” If it doesn’t recognize the command a third time, it plays the Help prompt.

To hear a list of available options at any time, press the Talk button, wait for the beep, and say, “Hands free link help.”

Many commands can be spoken together. For example, you can say, “Dial 123-456-7891.”

To enter a string of numbers in a Call or Dial command, you can say them all at once, or you can separate them in blocks of 3, 4, 7, 10, or 11.

To skip a voice prompt, press the Talk button while the HFL is speaking. The HFL will then begin listening for your next command.
• To go back one step in a command process, say, “Go back,” or press the Back button. If nothing is said while the HFL is listening for a command, the HFL will time out and stop its voice recognition. The next time you press the Talk button, the HFL begins listening from the point at which it timed out.

• To end a command sequence at any time, press and hold the Back button, or press and release the Talk button, wait for the beep, and say, “Cancel.” The next time you press the Talk button, the HFL begins from its main menu.

• When you finish a command sequence, the HFL goes back to its main menu. For example, when you store the name, “Eric,” the HFL response is, “Eric has been stored.” The next time you press the Talk button, you will be at the main menu.

Setting Up the System
The voice of the HFL can be set to male or female (U.S. models only). Also, the incoming notification can be set to a ring tone, a prompt, or no notification.

To set up the system, do this:
1. Press and release the Talk button. After the beep, say “System.” The HFL response is, “System options are setup and clear.”

2. Press and release the Talk button. After the beep, say “Setup.” The HFL response is “Would you like male or female prompts?”

3. Press and release the Talk button. After the beep, say “Male” or “Female,” depending on the system voice you want. The HFL response is, “Male (Female) prompts have been selected. Would you like an audible notification of an incoming call?”

CONTINUED
4. Press and release the Talk button. If you say “Yes” after the beep, the HFL system response is, “Would you like the notification to be a ring tone or a prompt?” If you say “No” after the beep, the HFL system returns to its main menu. Saying “No” will result in no ring tone or prompt playback during an incoming call. The audio system will be mute, and a message will be displayed.

5. Press and release the Talk button. After the beep, say “Ring tone” or “Prompt.” The HFT system response is “A ring tone will be used.” or “An incoming call prompt will be used.” If you choose “Ring tone,” you will hear a ring tone through the audio speakers to announce an incoming call. If you choose “Prompt,” you will hear this message to announce an incoming call: “You have an incoming call.”

6. The HFL response continues “A security option is available to lock the HFL. Each time the vehicle is turned on, a passcode would be required to use this system. Would you like this security option turned on?” If you say “Yes,” you can set your passcode. Refer to the setting procedure in the next column.

**Setting Your Passcode**
The HFL will accept a numeric, four-digit passcode that you can use for security purposes.

*To set your passcode, do this:*

1. Follow the system setup procedure as described previously.

2. Press and release the Talk button. After the beep, say “Yes.”

3. The HFL response is “What is the four-digit number you would like to set as your passcode?”

4. Press and release the Talk button. After the beep, say the four-digit passcode you want to use. For example, say “1, 2, 3, 4.” The HFL response is “1, 2, 3, 4. Is this correct?”
5. Press and release the Talk button. After the beep, say “Yes.” The HFL response is “Security is on. Each time the vehicle is turned on, the passcode will be required to use the system. The system setup is complete. Returning to the main menu.”

6. Press and release the Talk button. If you say “No” after the beep, the HFL system response is, “Security will not be used. The system setup is complete.”

To enter your passcode, do this:
Once a passcode is set, you can lock the HFL so it only operates after the passcode is entered.

1. The HFL will prompt you for your passcode each time the ignition switch is turned to the ON (II) position and you press the Talk button. You will only be asked for the passcode once per ignition cycle. If the passcode is set, its response is “The system is locked. What is the four-digit passcode?”

2. Press and release the Talk button. After the beep, say your four-digit passcode. For example, say “1, 2, 3, 4.”

3. If the passcode is correct, the HFL response is “Main menu.” If the passcode is not correct, the HFL response is “1,2,3,4 is incorrect. Please try again.” Go back to the step 2.

If you forget your passcode and you cannot activate the HFL, consult your dealer to cancel the passcode.

**Pairing Your Phone**
Your Bluetooth® compatible phone with HandsFree Profile must be paired to the HFL before you can make and receive hands-free calls.

**NOTE:**
- HFL does not allow you to pair your phone if the vehicle is moving.
- For pairing, your phone must be in its Discovery mode.
- Up to six phones can be paired to the HFL.
- The following procedure works for most phones. If you cannot pair your phone to the HFL with this procedure, refer to your phone’s operating manual, visit handsfreelink.com, call the HandsFreeLink customer support at (888) 528-7876 or call your phone retailer.
- During the pairing process, turn off any previously paired phones before pairing a new phone.

**CONTINUED**

217
1. With your phone on and the ignition in the ACCESSORY (I) or ON (II) position, press and release the Talk button. After the beep, say “Phone setup.” The HFL response is “Phone setup options are status, pair, edit, delete, and list.”

2. Press and release the Talk button. After the beep, say “Pair.” The HFL response is “The pairing process requires operation of your mobile phone. For safety, only perform this function while the vehicle is stopped. State a four-digit code for pairing. Note this code. It will be requested by the phone.”

3. Press and release the Talk button. After the beep, say the four-digit code you want to use. For example, say “1, 2, 3, 4.” The HFL response is “1, 2, 3, 4. Is this correct?”

4. Press and release the Talk button. After the beep, say “Yes.” The HFL response is “Searching for a Bluetooth phone.”

**NOTE:** Steps 5 and 6 show a common way to get your phone into its Discovery mode. If these steps do not work on your phone, refer to the phone’s operating manual.

5. Follow the prompts on your phone to get it into its Discovery mode. The phone will search for the HFL. When it comes up, select HandsFreeLink from the list of options displayed on your phone.

6. When asked by the phone, enter the four-digit code from step 3 into your phone. The HFL response is “A new phone has been found. What would you like to name this phone?”

7. Press and release the Talk button. After the beep, say the name you want to use. For example, say “Eric’s phone.” The HFL response is “Eric’s phone has been successfully paired. Returning to the main menu.”

8. If you want to pair another phone, repeat steps 1 through 7.
To rename a paired phone, do this:
1. Press and release the Talk button. After the beep, say “Phone setup.” The HFL response is “Phone setup options are status, pair, edit, delete, and list.”
2. Press and release the Talk button. After the beep, say “Edit.” The HFL response is “Which phone would you like to edit?”
3. Press and release the Talk button. After the beep, say the name of the phone you want to rename. For example, say “Eric’s phone.” The HFL response is “What is the new name for Eric’s phone?”
4. Press and release the Talk button. After the beep, say the new name of the phone. For example, say “Lisa’s phone.” The HFL response is, “The name has been changed. Returning to the main menu.”

To delete a paired phone, do this:
1. Press and release the Talk button. After the beep, say “Phone setup.” The HFL response is, “Phone setup options are status, pair, edit, delete, and list.”
2. Press and release the Talk button. After the beep, say “Delete.” The HFL response is, “Which phone would you like to delete?”
3. Press and release the Talk button. After the beep, say the name of the phone you want to delete. For example say “Eric’s phone.” The HFL response is, “Would you like to delete Eric’s phone?”
4. Press and release the Talk button. After the beep, say “Yes.” The HFL response is “Preparing to delete Eric’s phone.” Say “OK” to continue. Otherwise, say “Go back,” or “Cancel.”
5. Press and release the Talk button. If you say “OK” after the beep, the HFL response is “The phone has been deleted. Returning to the main menu.” If you say “Go back,” or “Cancel,” the phone will not be deleted.
To list all paired phones, do this:
1. Press and release the Talk button. After the beep, say “Phone setup.” The HFL response is “Phone setup options are status, pair, edit, delete, and list.”

2. Press and release the Talk button. After the beep, say “List.” The HFL responds by listing the name of each paired phone. When all phones paired to the system have been read, the HFL response is “The entire list has been read. Returning to the main menu.”

To find out the status of the phone being used, do this:
1. Press and release the Talk button. After the beep, say “Phone setup.” The HFL response is “Phone setup options are status, pair, edit, delete, and list.”

2. Press and release the Talk button. After the beep, say “Status.” An example of the HFL response is, “Eric’s phone is linked. Battery strength is three bars. Signal strength is five bars, and the phone is roaming. Returning to the main menu.”

To change from the currently linked phone to another paired phone, do this:
1. Press and release the Talk button. After the beep, say “Phone setup.” The HFL response is “Searching for the next phone.” The HFL then disconnects the linked phone and searches for another paired phone. If no other phones are found, the first phone remains linked.
Making a Call
You can make calls using any phone number, or by using a name in the HFL phonebook. You can also redial the last number called. During a call, the HFL allows you to talk up to 30 minutes after you remove the key from the ignition switch.

To make a call using a phone number, do this:
1. With your phone on and the ignition in the ACCESSORY (I) or ON (II) position, press and release the Talk button. After the beep, say “Call” or “Dial.” The HFL response is “What name or number would you like to call/dial?”
2. Press and release the Talk button. After the beep, say the number you want to call. For example, say “123 456 7891.” The HFL response is “123 456 7891. Say call, dial, or continue to add numbers.”
3. Press and release the Talk button. After the beep, say “Call” or “Dial.” The HFL response is “Calling” or “Dialing.” Once connected, you will hear the person you called through the audio speakers. To change the volume, use the audio system volume knob.
4. To end the call, press the Back button.

On vehicles with navigation system
You can also make a call directly from the list shown on the navigation display.

To make a call using a name in the HFL phonebook, do this:
1. With your phone on and the ignition in the ACCESSORY (I) or ON (II) position, press and release the Talk button. After the beep, say “Call” or “Dial.” The HFL response is “What name or number would you like to call/dial?”
2. Press and release the Talk button. After the beep, say the name you want to call. For example, say “Eric.” The HFL response is “Would you like to call Eric?”
3. Press and release the Talk button. After the beep, say “Yes.” The HFL response is “Calling” or “Dialing.” Once connected, you will hear the person you called through the audio speakers. To change the volume, use the audio system volume knob.

CONTINUED
4. To end the call, press the Back button.

To redial the last number called by the phone, press and release the Talk button. After the beep, say “Redial.” The HFL response is, “Redialing.” Once connected, you will hear the person you called through the audio speakers. To change the volume, use the audio system volume knob.

Sending Numbers or Names During a Call
The HFL allows you to send numbers or names during a call. This is useful when you call a menu-driven phone system. You can also program account numbers into the HFL phonebook for easy retrieval during menu-driven calls.

To send a number during a call, do this:
1. Press and release the Talk button. After the beep, say “Send.” The HFL response is, “What name or number would you like to send?”

2. Press and release the Talk button. After the beep, say the number you want to send. For example, say “1, 2, 3.” The HFL response is “1, 2, 3. Say send, or continue to add numbers.”

3. Press and release the Talk button. After the beep, say “Send.” The dial tones will be sent, and the call will continue.

To send a name during a call, do this:
1. Press and release the Talk button. After the beep, say “Send.” The HFL response is, “What name or number would you like to send?”

2. Press and release the Talk button. After the beep, say the name you want to send. For example, say “Account number.” The HFL response is “Would you like to send account number?”

3. Press and release the Talk button. After the beep, say “Send.” The dial tones will be sent, and the call will continue.
Receiving a Call
If you receive a call when you are not on the phone, the HFL interrupts the audio system (if it is on), and plays the incoming call notification, if activated. To answer the call, press the Talk button and begin speaking. If you don’t want to answer the call, press the Back button.

If your phone has Call Waiting, and you receive a call when you are on the phone, press and release the Talk button to answer it. When you do this, the original call is placed on hold. To return to the original call, press the Talk button again. If you don’t want to answer the new call, disregard it, and continue with your original call. If you want to hang up the original call and answer the new call, press the Back button.

Transferring a Call
During a call, you can transfer it from the HFL to your phone, or from your phone to the HFL.

To transfer a call from the HFL to your phone, do this:
Press and release the Talk button. After the beep, say “Transfer.” The audio switches from the HFL to the phone.

To transfer a call from your phone to the HFL, do this:
Press and release the Talk button. After the beep, say “Transfer.” The audio switches from your phone to the HFL.

Muting a Call
During a call, you can mute or unmute your voice to the person you are talking to.

To mute your voice, do this:
1. Press and release the Talk button. After the beep, say “Mute.” The HFL response is, “Mute is active.”

To unmute your voice, do this:
2. Press and release the Talk button. After the beep, say “Mute.” The HFL response is, “Mute is canceled.”

Setting up the Phonebook
The HFL phonebook can store up to 50 names with their associated numbers. These can be any types of numbers. For example, you can store a phone number and use it to make a call, or you can store an account number and use it during a call to a menu-driven phone system.

CONTINUED
To add a name, do this:
1. Press and release the Talk button. After the beep, say "Phonebook." The HFL response is "Phonebook options are store, edit, delete, and list."

2. Press and release the Talk button. After the beep, say "Store." The HFL response is, "What name would you like to store?"

3. Press and release the Talk button. After the beep, say the name you would like to store. For example, say "Eric" or say "account number." The HFL response is "What is the number for Eric," or "What is the number for account number?"

4. Press and release the Talk button. After the beep, say the number. For example, say "123 456 7891." The HFL response is "123 456 7891."

5. Press and release the Talk button. After the beep, say "Enter." The HFL response is "987 654 3219." The HFL response is, "987 654 3219."

To edit the number of a name, do this:
1. Press and release the Talk button. After the beep, say "Phonebook." The HFL response is "Phonebook options are store, edit, delete, and list."

2. Press and release the Talk button. After the beep, say "Edit." The HFL response is, "What name would you like to edit?"

3. Press and release the Talk button. After the beep, say the name you would like to edit. For example, say "Eric." The HFL response is "What is the new number for Eric?"

4. Press and release the Talk button. After the beep, say the new number for Eric. For example, say "987 654 3219." The HFL response is, "987 654 3219."

5. Press and release the Talk button. After the beep, say "Enter." The HFL response is "The number has been changed. Returning to the main menu."

To delete a name, do this:
1. Press and release the Talk button. After the beep, say "Phonebook." The HFL response is, "The Phonebook options are store, edit, delete, and list."

2. Press and release the Talk button. After the beep, say "Delete." The HFL response is, "What name would you like to delete?"
3. Press and release the Talk button. After the beep, say the name you would like to delete. For example, say “Eric.” The HFL response is “Do you want to delete Eric?”

4. Press and release the Talk button. After the beep, say “Yes.” The HFL response is, “The name has been deleted. Returning to the main menu.”

To list all names in the phonebook, do this:
1. Press and release the Talk button. After the beep, say “Phonebook.” The HFL response is, “The Phonebook options are store, edit, delete, and list.”

2. Press and release the Talk button. After the beep, say “List.” The HFL responds by listing the names in the phonebook. When the end of the list is reached, the HFL response is, “The entire list has been read. Returning to the main menu.”

To call a name from the phonebook list, do this:
1. Press and release the Talk button. After the beep, say “Phonebook.” The HFL response is “Phonebook options are store, edit, delete, and list.”

2. Press and release the Talk button. After the beep, say “List.” The HFL responds by listing the names in the phonebook. When it says the name you want to call, for example, Eric, press the Talk button, and then say “Call.” The HFL response is, “Would you like to call Eric?”

3. Press and release the Talk button. After the beep, say “Yes.” The HFL response is “Calling.” Once connected, you will hear the person you called through the audio speakers. To change the volume, use the audio system volume knob.

Clearing the System
This operation clears the HFL of your passcode, your paired phones, and all names in the HFL phonebook. Clearing is recommended before you sell your vehicle.

To clear the system, do this:
1. Press and release the Talk button. After the beep, say “System.” The HFL response is, “System options are setup and clear.”

CONTINUED
2. Press and release the Talk button. After the beep, say “Clear.” The HFL response is, “This process will clear all paired phones, clear all entries in the phonebook, and clear the passcode. Is this what you would like to do?”

3. Press and release the Talk button. After the beep, say “Yes.” The HFL response is “Preparing to clear all paired phones, all phonebook entries, and the passcode. This may take up to 2 minutes to complete.” Press and release the Talk button. After the beep, say “OK” to proceed, or say “Go back” or “Cancel.”

4. If you said “OK,” after a short period of time, the HFL response is, “System has been cleared. Returning to the main menu.”

Changing Language (Canadian Models Only)

To change from English to French, do this:

1. Press and release the Talk button. After the beep, say “Change language.” The HFL response is “English or French?”

3. Press and release the Talk button. After the beep, say “Oui.” If there are no paired phones without French name tags, the HFL response is “La langue a été changée. Retour au menu principal.”

NOTE: If there are paired phones without French name tags, the following prompts will continue.

If there are paired phones without French name tags, the HFL response is “Pour que le système identifie les téléphones qui ont été jumelés dans une autre langue, les noms des téléphones doivent être ré-enregistrés.”
4. The HFL response is, for example, “Quel est le nom Français pour <Paul’s phone>?” Press and release the Talk button. After the beep, say “Téléphone de Paul.” The HFL response is, “Quel est le nom Français pour <Pat’s phone>?” Press and release the Talk button. Say “Téléphone de Pat.” After all paired phones missing a French name tag are re-recorded, the HFL will prompt, “Retour au menu principal.”

To change from French to English, do this:
1. Press and release the Talk button. After the beep, say “Changer Langue.” The HFL response is, “Anglais ou Français?”
2. Press and release the Talk button. After the beep, say “Anglais.” The HFL response is, “You have selected English. Name tags that were stored while in French mode will not be accessible in English mode. Would you like to continue?”

3. Press and release the Talk button. After the beep, say “Yes.” If there are no paired phones without English name tags, the HFL response is “The language has been changed. Returning to the main menu.”

NOTE: If there are paired phones without English name tags, the following prompts will continue.

If there are paired phones without English name tags, the HFL response is “The language has been changed. For the system to identify phones that were paired while in another language, the phone names need to be re-recorded.”

CONTINUED
4. The HFL says, for example, “What is the English name for <Téléphone de Paul>?" Press and release the Talk button. After the beep, say “Paul’s phone.” The HFL response is “What is the English name for <Téléphone de Pat>?" Press and release the Talk button. After the beep, say “Pat’s phone.” After all paired phones missing an English name tag are re-recorded, the HFL will say “Returning to the main menu.”
Before you begin driving your vehicle, you should know what gasoline to use and how to check the levels of important fluids. You also need to know how to properly store luggage or packages. The information in this section will help you. If you plan to add any accessories to your vehicle, please read the information in this section first.
Break-in Period
Help assure your vehicle’s future 
reliability and performance by paying 
extra attention to how you drive 
during the first 600 miles (1,000 km). 
During this period:

- Avoid full-throttle starts and rapid 
acceleration.

- Do not change the oil until the 
scheduled maintenance time.

- Avoid hard braking for the first 
200 miles (300 km).

- Do not tow a trailer.

You should also follow these 
recommendations with an 
overhauled or exchanged engine, or 
when the brakes are replaced.

Fuel Recommendation
Your vehicle is designed to operate 
on premium unleaded gasoline with a 
pump octane number of 91 or higher. 
Use of a lower octane gasoline can 
cause occasional metallic knocking 
oises in the engine and will result in 
decreased engine performance. Use 
of a gasoline with a pump octane 
number less than 87 can lead to 
engine damage.

On vehicles with manual transmission
You may hear a knocking noise from 
the engine if you drive the vehicle at 
low engine speed (below about 1,000 
rpm) in a higher gear. To stop this, 
raise the engine speed by shifting to 
a lower gear.

We recommend quality gasoline 
containing detergent additives that 
help prevent fuel system and engine 
deposits. 
In addition, in order to maintain good 
performance, fuel economy, and 
emissions control, we strongly 
recommend, in areas where it is 
available, the use of gasoline that 
does NOT contain manganese-based 
fuel additives such as MMT. 
Use of gasoline with these additives 
may adversely affect performance, 
and cause the malfunction indicator 
lamp on your instrument panel to 
come on. If this happens, contact 
your authorized dealer for service.

Some gasoline today is blended with 
oxygenates such as ethanol or 
MTBE. Your vehicle is designed to 
operate on oxygenated gasoline 
containing up to 10 % ethanol by 
volume and up to 15 % MTBE by 
volume. Do not use gasoline 
containing methanol.

If you notice any undesirable 
operating symptoms, try another 
service station or switch to another 
brand of gasoline.

For further important fuel-related 
information, please refer to your 
Quick Start Guide.
Refueling

1. Park with the driver’s side closest to the gas pump.

2. To open the fuel fill door, push down on the lever located to the left of the driver’s seat.

3. Remove the fuel fill cap slowly. You may hear a hissing sound as pressure inside the tank escapes. The fuel fill cap is attached to the fuel filler with a tether. Put the attachment on the fuel fill cap into the slit on the fuel fill door.

**WARNING**

Gasoline is highly flammable and explosive. You can be burned or seriously injured when handling fuel.

- Stop the engine, and keep heat, sparks, and flame away.
- Handle fuel only outdoors.
- Wipe up spills immediately.
4. Stop filling the tank after the fuel nozzle automatically clicks off. Do not try to “top off” the tank. Leave some room for the fuel to expand with temperature changes.

*If the fuel nozzle keeps clicking off* even though the tank is not full, there may be a problem with your vehicle’s fuel vapor recovery system. The system helps keep fuel vapor from going into the atmosphere. Try filling at another pump. If this does not fix the problem, consult your dealer.

5. Screw the fuel fill cap back on until it clicks at least once. If you do not properly tighten the cap, the malfunction indicator lamp may come on (see page 332). You will also see a “TIGHTEN FUEL CAP” message on the multi-information display.

6. Push the fuel fill door closed until it latches.

---

**Opening and Closing the Hood**

1. Park the vehicle, and set the parking brake. Pull the hood release handle located under the lower left corner of the dashboard. The hood will pop up slightly.
Lift it up slightly to remove the support rod from the hole. Put the support rod back into its holding clip. Lower the hood to about a foot (30 cm) above the fender, then let it drop. Make sure it is securely latched.

To Close the Hood:
Lift it up slightly to remove the support rod from the hole. Put the support rod back into its holding clip. Lower the hood to about a foot (30 cm) above the fender, then let it drop. Make sure it is securely latched.

2. Put your fingers under the front edge of the hood near the center. Slide your hand to the left until you feel the hood latch handle. Push this handle up to release it. Lift up the hood.

If the hood latch handle moves stiffly, or if you can open the hood without lifting the handle, the mechanism should be cleaned and lubricated.

3. Pull the support rod out of its clip by holding the grip, and insert the end into the designated hole in the hood.
Oil Check

1. Remove the dipstick (orange handle).
2. Wipe the dipstick with a clean cloth or paper towel.
3. Insert the dipstick all the way back into its hole.

Wait a few minutes after turning the engine off before you check the oil.

Engine Coolant Check

Look at the coolant level in the radiator reserve tank. Make sure it is between the MAX and MIN lines. If it is below the MIN line, see Adding Engine Coolant on page 291 for information on adding the proper coolant.

Refer to Owner’s Maintenance Checks on page 282 for information about checking other items on your vehicle.

4. Remove the dipstick again, and check the level. It should be between the upper and lower marks.

If it is near or below the lower mark, see Adding Engine Oil on page 287.
Improving Fuel Economy

- Always maintain your vehicle according to the maintenance messages given by the multi-information display. See Owner’s Maintenance Checks on page 282.

For example, an underinflated tire causes more “rolling resistance,” which uses more fuel.

The build-up of snow or mud on your vehicle’s underside adds weight and rolling resistance. Frequent cleaning helps your fuel mileage and reduces the chance of corrosion.

- Drive moderately. Rapid acceleration, abrupt cornering, and hard braking use more fuel.

- Always drive in the highest gear possible.

- Try to maintain a constant speed. Every time you slow down and speed up, your vehicle uses extra fuel. Use cruise control when appropriate.

- Combine several short trips into one.

- The air conditioning puts an extra load on the engine which makes it use more fuel. Use the fresh-air ventilation when possible.
Before installing any accessory:

- Make sure the accessory does not obscure any lights, or interfere with proper vehicle operation or performance.
- Be sure electronic accessories do not overload electrical circuits (see page 336) or interfere with proper operation of your vehicle.
- Before installing any electronic accessory, have the installer contact your dealer for assistance. If possible, have your dealer inspect the final installation.
- Do not install accessories on the side pillars or across the rear windows. In these areas, accessories may interfere with proper operation of the side curtain airbags.

**WARNING**

Improper accessories or modifications can affect your vehicle’s handling, stability, and performance, and cause a crash in which you can be hurt or killed.

Follow all instructions in this owner’s manual regarding accessories and modifications.

When properly installed, cellular phones, alarms, two-way radios, and low-powered audio systems should not interfere with your vehicle’s computer controlled systems, such as your airbags, anti-lock brakes, and tire pressure monitoring system.

Modifying your vehicle, or installing some non-Acura accessories, can make your vehicle unsafe. Before you make any modifications or add any accessories, be sure to read the following information.

**Accessories**

Your dealer has Acura accessories that allow you to personalize your vehicle. These accessories have been designed and approved for your vehicle, and are covered by warranty.

Although non-Acura accessories may fit on your vehicle, they may not meet factory specifications, and could adversely affect your vehicle’s handling and stability.
Modifying Your Vehicle
Removing parts from your vehicle, or replacing components with non-Acura components could seriously affect your vehicle’s handling, stability, and reliability.

Some examples are:
- Lowering the vehicle with a non-Acura suspension kit that significantly reduces ground clearance can allow the undercarriage to hit speed bumps or other raised objects, which could cause the airbags to deploy.
- Raising your vehicle with a non-Acura suspension kit can affect the handling and stability.
- Non-Acura wheels can cause excessive stress on suspension components and are not compatible with the tire pressure monitoring system.
- Larger or smaller wheels and tires can interfere with the operation of your vehicle’s anti-lock brakes and other systems.
- Modifying your steering wheel or any other part of your vehicle’s safety systems could make the systems ineffective.

If you plan to modify your vehicle, consult your dealer.
Your vehicle has several convenient storage areas:

- Glove box
- Door pockets
- Trunk, including the back seats when folded down
- Center pocket
- Console compartment

However, carrying too much cargo, or improperly storing it, can affect your vehicle’s handling, stability, stopping distance, and tires, and make it unsafe. Before carrying any type of cargo, be sure to read the following pages.
**Load Limits**

The maximum load for your vehicle is 850 lbs (385 kg) for U.S. vehicles, and 395 kg for Canadian vehicles. This figure includes the total weight of all occupants, cargo, and accessories, and the tongue load if you are towing a trailer.

**WARNING**

Overloading or improper loading can affect handling and stability and cause a crash in which you can be hurt or killed.

Follow all load limits and other loading guidelines in this manual.

---

Steps for Determining Correct Load Limit:

1. Locate the statement, “the combined weight of occupants and cargo should never exceed 850 lbs” on your vehicle’s placard. (The placard is on the driver’s doorjamb).

2. Determine the combined weight of the driver and passengers that will be riding in your vehicle.

3. Subtract the combined weight of the driver and passengers from 850 lbs.

4. The resulting figure equals the available amount of cargo and luggage load capacity.

For example, if the maximum load is 850 lbs and there will be five 150 lb. passengers in your vehicle, the amount of available cargo and luggage load capacity is 100 lbs. 

\(850 - 750 = 100\) lbs.

5. Determine the combined weight of luggage and cargo being loaded on the vehicle. That weight may not safely exceed the available cargo and luggage load capacity calculated in step 4.

6. If your vehicle will be towing a trailer, load from your trailer will be transferred to your vehicle. Consult this manual to determine how this reduces the available cargo and luggage load capacity of your vehicle (see page 265).

*CONTINUED*
Carrying Cargo

In addition, the total weight of the vehicle, all occupants, accessories, cargo, and trailer tongue load must not exceed the gross vehicle weight rating (GVWR) or the gross axle weight rating (GAWR). Both are on a label on the driver’s doorjamb.

Carrying Cargo in the Trunk

- Distribute cargo evenly on the floor of the trunk, placing the heaviest items on the bottom and as far forward as possible. Tie down items that could be thrown about the vehicle during a crash or sudden stop.

- If you fold down the back seat, tie down items that could be thrown about the vehicle during a crash or sudden stop.

- If you carry large items that prevent you from closing the trunk lid, exhaust gas can enter the passenger area. To avoid the possibility of carbon monoxide poisoning, follow the instructions on page 55.

Carrying Items in the Passenger Compartment

- Store or secure all items that could be thrown around and hurt someone during a crash.

- Be sure items placed on the floor behind the front seats cannot roll under the seats and interfere with the driver’s ability to operate the pedals or the seat.

- Keep the glove box closed while driving. If it is open, a passenger could injure their knees during a crash or sudden stop.

- Do not put any items on top of the rear shelf. They can block your view and be thrown around the vehicle during a crash.
This section gives you tips on starting the engine under various conditions, and how to operate the manual and automatic transmissions. It also includes important information on parking your vehicle, the braking system, the vehicle stability assist (VSA) system, the tire pressure monitoring system (TPMS), and facts you need if you are planning to tow a trailer.

You should do these checks and adjustments before you drive your vehicle:

1. Make sure all windows, mirrors, and outside lights are clean and unobstructed. Remove frost, snow, or ice.

2. Check that the hood is fully closed.

3. Check that the trunk is fully closed.

4. Visually check the tires. If a tire looks low, use a gauge to check its pressure (see page 310).

5. Check that any items you may be carrying are stored properly or fastened down securely.

6. Check the seat adjustment (see page 138).

7. Check the adjustment of the inside and outside mirrors (see pages 145 and 146).

8. Check the steering wheel adjustment (see page 125).

9. Make sure the doors are securely closed and locked.

10. Fasten your seat belt. Check that your passengers have fastened their seat belts (see page 15).

11. When you start the engine, check the gauges and indicators in the instrument panel, and the messages on the multi-information display (see pages 61, 68 and 76).
1. Apply the parking brake.

2. In cold weather, turn off all electrical accessories to reduce the drain on the battery.

3. Manual transmission:
   Push the clutch pedal down all the way.

   Automatic transmission:
   Make sure the shift lever is in Park. Press on the brake pedal.

4. Without touching the accelerator pedal, turn the ignition key to the START (III) position. Do not hold the key in the START (III) position for more than 15 seconds at a time. If the engine does not start right away, pause for at least 10 seconds before trying again.

5. If the engine does not start within 15 seconds, or starts but stalls right away, repeat step 4 with the accelerator pedal pressed halfway down. If the engine starts, release pressure on the accelerator pedal so the engine does not race.

6. If the engine fails to start, press the accelerator pedal all the way down and hold it there while starting to clear flooding. Return to step 5 if the engine does not start.

**NOTICE**

The immobilizer system protects your vehicle from theft. If an improperly-coded key (or other device) is used, the engine’s fuel system is disabled. For more information, see page 127.

The engine is harder to start in cold weather. Also, the thinner air found at altitudes above 8,000 feet (2,400 meters) adds to this problem.
Come to a full stop before you shift into reverse. You can damage the transmission by trying to shift into reverse with the vehicle moving. Push down the clutch pedal, and pause for a few seconds before shifting into reverse, or shift into one of the forward gears for a moment. This stops the gears so they won’t “grind.”

When slowing down, you can get extra braking from the engine by shifting to a lower gear. This extra braking can help you maintain a safe speed and prevent your brakes from overheating while going down a steep hill. Before downshifting, make sure the engine speed will not go into the tachometer’s red zone in the lower gear. Downshift one gear at a time.

The manual transmission is synchronized in all forward gears for smooth operation. When shifting up or down, make sure you push the clutch pedal down all the way, shift to the next gear, and let the pedal up gradually. When you are not shifting, do not rest your foot on the clutch pedal. This can cause your clutch to wear out faster.

</tbody>
</table>

**WARNING**

Rapid slowing or speeding up can cause loss of control on slippery surfaces. If you crash, you can be injured.

Use extra care when driving on slippery surfaces.

**Recommended Shift Points**

Drive in the highest gear that lets the engine run and accelerate smoothly. This will give you good fuel economy and effective emissions control. The following shift points are recommended:
Engine Speed Limiter
If you exceed the maximum speed for the gear you are in, the engine speed will enter into the tachometer’s red zone. If this occurs, you may feel the engine cut in and out. This is caused by a limiter in the engine’s computer controls. The engine will run normally when you reduce the rpm below the red zone.

The engine speed limiter only works when you upshift; engine speed is not limited during downshifts. Before downshifting, make sure the engine will not go into the tachometer’s red zone.

Reverse Lockout
The 6-speed manual transmission has an electric lockout so you cannot accidentally shift from fifth to reverse instead of sixth while the vehicle is moving. If you cannot shift to reverse when the vehicle is stopped:

1. Apply the parking brake, and turn the ignition key to the ACCESSORY (I) or the LOCK (0) position.

2. Press the clutch pedal, and shift to reverse.

3. With the clutch pedal still pressed, start the engine.

If you need to use this procedure to shift to reverse, your vehicle may be developing a problem. Have the vehicle checked by your dealer.
The "D" indicator comes on for a few seconds when you turn the ignition switch to the ON (II) position. If it flashes while driving (in any shift position), it indicates a possible problem in the transmission.

If the malfunction indicator lamp comes on along with the "D" indicator, there is a problem with the automatic transmission control system. Avoid rapid acceleration, and have the transmission checked by your dealer as soon as possible.

When the "D" indicator warns of a possible problem with the transmission, you will see a "CHECK TRANSMISSION" message on the multi-information display (see page 83).

These indicators in the tachometer show which position the shift lever is in.

The "D" indicator comes on for a few seconds when you turn the ignition switch to the ON (II) position. If it flashes while driving (in any shift position), it indicates a possible problem in the transmission.

To shift from any position, move the shift lever. You cannot shift out of Park when the ignition switch is in the LOCK (0) or the ACCESSORY (I) position.
To shift from:

<table>
<thead>
<tr>
<th>To shift from:</th>
<th>Do this:</th>

</tr>
</tbody>
</table>

To avoid transmission damage, come to a complete stop before shifting into Park. The shift lever must be in Park before you can remove the key from the ignition switch.

**Reverse (R)** — Press the brake pedal, and move the shift lever from Park to reverse. To shift from reverse to neutral, come to a complete stop, and then shift.

Your vehicle has a reverse lockout so you cannot accidentally shift to reverse from neutral or any other driving position when the vehicle speed exceeds 5–6 mph (8–10 km/h).

If you cannot shift to reverse when the vehicle is stopped, press the brake pedal, slowly shift to neutral, and then shift to reverse.

If there is a problem in the reverse lockout system, or your vehicle’s battery is disconnected or goes dead, you cannot shift to reverse. (Refer to **Shift Lock Release** on page 251).

**Neutral (N)** — Use neutral if you need to restart a stalled engine, or if it is necessary to stop briefly with the engine idling. Shift to the Park position if you need to leave your vehicle and apply the parking brake. Press on the brake pedal when you are moving the shift lever from neutral to another gear.

**Drive (D)** — Use this position for your normal driving. The transmission automatically selects a suitable gear for the vehicle speed and acceleration. You may notice the transmission shifting up at higher speeds when the engine is cold. This helps the engine warm up faster.

**Park (P)** — This position mechanically locks the transmission. Use Park whenever you are turning off or starting the engine. To shift out of Park, you must press on the brake pedal and have your foot off the accelerator pedal. Move the shift lever to the right to shift out of Park.

If you have done all of the above and still cannot move the lever out of Park, see **Shift Lock Release** on page 251.
Drive (D3) — This position is similar to D, except only the first three gears are selected instead of all five. Use D3 when towing a trailer in hilly terrain, or to provide engine braking when going down a steep hill. D3 can also keep the transmission from cycling between third and fourth gears in stop-and-go driving.

Sequential SportShift Mode — With the shift lever in “D” position, you can select the Sequential SportShift mode to shift gears; much like a manual transmission, but without a clutch pedal.

To enter the Sequential SportShift mode, move the shift lever further to the driver’s side. To return to “D,” move the shift lever to the passenger’s side.

When you move the shift lever from “D” to “M” position, the display shows the selected gear.

In Sequential SportShift mode, each time you push forward on the shift lever, the transmission shifts to a higher gear. Pull back on the lever to downshift. The number of the gear selected is displayed on the instrument panel.
Automatic Transmission

The transmission may automatically downshift from the higher gear to the lower gear under the following conditions:

- The vehicle speeds drops below
  - 5 → 4: 33 mph (52 km/h)
  - 4 → 3: 20 mph (32 km/h)
- If you drive uphill between
  - 5 → 4: 45–33 mph
    (72–52 km/h)
  - 4 → 3: 33–20 mph
    (52–32 km/h)
  - 3 → 2: 20–10 mph
    (32–16 km/h)
- If you press the brake pedal as you drive downhill.

Downshifting gives you more power when climbing, and provides engine braking when going down a steep hill.

The transmission will also shift automatically as the vehicle comes to a complete stop. It will downshift to first gear when the vehicle speed is under 6 mph (10 km/h).

- If you try to manually downshift at a speed that would cause the engine to exceed the redline in a lower gear, the transmission will not downshift. The gear indicator will flash the number of the lower gear several times, then return to the higher gear.

- If you drive downhill between
  - 54: 45 33 mph (72 52 km/h)
  - 43: 32 20 mph (52 32 km/h)
  - 32: 20 10 mph (32 16 km/h)
- If you press the brake pedal as you drive downhill.

The transmission remains in the selected gear (5, 4, 3, 2, or 1). There is no automatic downshift when you push the accelerator pedal to the floor.

When you accelerate away from a stop, the transmission will be in first gear. The transmission will not automatically upshift. Watch the tachometer and upshift manually before the engine reaches the redline.

The transmission will also shift automatically as the vehicle comes to a complete stop. It will downshift to first gear when the vehicle speed is under 6 mph (10 km/h).

- If you try to manually downshift at a speed that would cause the engine to exceed the redline in a lower gear, the transmission will not downshift. The gear indicator will flash the number of the lower gear several times, then return to the higher gear.

- If the vehicle speed slows to below the redline of the selected lower gear position while the indicator is flashing, the transmission will downshift and the display will show the selected lower gear.

Continued
The table shows the speed ranges for upshifting and downshifting.

### Starting in Second Gear

When you are in Sequential SportShift mode, and the vehicle is stopped, push forward on the shift lever to shift to second gear. You will see “2” in the display. Starting out in second gear will help to reduce wheelspin in deep snow or on a slippery surface.

If you start out in second gear, the transmission will be fixed in that gear.

The transmission will not automatically downshift to first gear even when the vehicle speed is under 6 mph (10 km/h). You need to shift down to first gear manually.
**Engine Speed Limiter**

If you exceed the maximum speed for the gear you are in, the engine speed will enter into the tachometer’s red zone. If this occurs, you may feel the engine cut in and out. This is caused by a limiter in the engine’s computer controls. The engine will run normally when you reduce the rpm below the red zone.

Before downshifting, make sure the engine will not go into the tachometer’s red zone.

---

**Shift Lock Release**

This allows you to move the shift lever out of Park if the normal method of pushing on the brake pedal does not work. This procedure is also used to release the reverse lockout.

1. Set the parking brake.
2. Remove the key from the ignition switch.

To release the reverse lockout, make sure the ignition switch is in the ACCESSORY (I) position.

3. Put a cloth on the notch of the shift lock release slot cover. Using a small flat-tipped screwdriver or a metal fingernail file, carefully pry on the notch of the cover to remove it.

*CONTINUED*
4. Insert the key in the shift lock release slot.

5. Push down on the key while you move the shift lever out of Park to neutral.

To release the reverse lockout, move the shift lever from neutral to reverse, then to Park.

6. Remove the key from the shift lock release slot, then reinstall the cover. Make sure the notch on the cover is on the driver's side. Press the brake pedal, and restart the engine.

If you need to use the shift lock release, it means your vehicle is developing a problem. Have it checked by your dealer.
Always use the parking brake when you park your vehicle. Make sure the parking brake is set firmly, or your vehicle may roll if it is parked on an incline.

If your vehicle has an automatic transmission, set the parking brake before you put the transmission in Park. This keeps the vehicle from moving and putting pressure on the parking mechanism in the transmission.

If your vehicle has a manual transmission, put it in first gear.

Parking Tips
- Make sure the moonroof and the windows are closed.
- Turn off the lights.
- Place any packages, valuables, etc., in the trunk or take them with you.
- Lock the doors with the key or the remote transmitter. Check the indicator on the instrument panel to verify that the security system is set.
- Never park over dry leaves, tall grass, or other flammable materials. The hot three way catalytic converter could cause these materials to catch on fire.

- If the vehicle is facing uphill, turn the front wheels away from the curb. If your vehicle has a manual transmission, put it in first gear.
- If the vehicle is facing downhill, turn the front wheels toward the curb. If your vehicle has a manual transmission, put it in reverse gear.
- Make sure the parking brake is fully released before driving away. Driving with the parking brake partially set can overheat or damage the rear brakes.

Parking Tips
- Make sure the moonroof and the windows are closed.
- Turn off the lights.
- Place any packages, valuables, etc., in the trunk or take them with you.
- Lock the doors with the key or the remote transmitter. Check the indicator on the instrument panel to verify that the security system is set.
- Never park over dry leaves, tall grass, or other flammable materials. The hot three way catalytic converter could cause these materials to catch on fire.

- If the vehicle is facing uphill, turn the front wheels away from the curb. If your vehicle has a manual transmission, put it in first gear.
- If the vehicle is facing downhill, turn the front wheels toward the curb. If your vehicle has a manual transmission, put it in reverse gear.
- Make sure the parking brake is fully released before driving away. Driving with the parking brake partially set can overheat or damage the rear brakes.
Braking System

Your vehicle is equipped with disc brakes at all four wheels. A power assist helps reduce the effort needed on the brake pedal. The anti-lock brake system (ABS) helps you retain steering control when braking very hard.

Resting your foot on the pedal keeps the brakes applied lightly, builds up heat, increases wear, and reduces their effectiveness. It also keeps your brake lights on all the time, confusing drivers behind you.

Constant application of the brakes when going down a long hill builds up heat and reduces their effectiveness. Use the engine to assist the brakes by taking your foot off the accelerator and downshifting to a lower gear.

Check the brakes after driving through deep water. Apply the brakes moderately to see if they feel normal. If not, apply them gently and frequently until they do. Be extra cautious and alert in your driving.

Braking System Design
The hydraulic system that operates the brakes has two separate circuits. Each circuit works diagonally across the vehicle (the left-front brake is connected with the right-rear brake, etc.). If one circuit should develop a problem, you will still have braking at two wheels.

Brake Wear Indicators
All four brakes have audible brake wear indicators.

If the brake pads need replacing, you will hear a distinctive, metallic screeching sound when you apply the brake pedal. If you do not have the brake pads replaced, they will screech all the time. It is normal for the brakes to occasionally squeal or squeak when you apply them.
The anti-lock brake system (ABS) helps prevent the wheels from locking up, and helps you retain steering control by pumping the brakes rapidly, much faster than a person can do it.

The electronic brake distribution (EBD) system, which is part of the ABS, also balances the front-to-rear braking distribution according to vehicle loading.

You should never pump the brake pedal. Let the ABS work for you by always keeping firm, steady pressure on the brake pedal. This is sometimes referred to as “stomp and steer.”

You will feel a pulsation in the brake pedal when the ABS activates, and you may hear some noise. This is normal: it is the ABS rapidly pumping the brakes. On dry pavement, you will need to press on the brake pedal very hard before the ABS activates. However, you may feel the ABS activate immediately if you are trying to stop on snow or ice.

ABS Indicator

If this indicator comes on, the anti-lock function of the braking system has shut down. The brakes still work like a conventional system, but without anti-lock. You should have your dealer inspect your vehicle as soon as possible.

When the ABS indicator comes on, you will also see a “CHECK ABS SYSTEM” message on the multi-information display.

If the ABS indicator and the brake system indicator come on together, and the parking brake is fully released, the EBD system may also be shut down.

Continued
Anti-lock Brakes (ABS)

Test your brakes as instructed on page 326. If the brakes feel normal, drive slowly and have your vehicle repaired by your dealer as soon as possible. Avoid sudden hard braking which could cause the rear wheels to lock up and possibly lead to a loss of control.

The VSA indicator will come on along with the ABS indicator.

**Important Safety Reminders**

ABS does not reduce the time or distance it takes to stop the vehicle. It only helps with the steering control during braking.

ABS will not prevent a skid that results from changing direction abruptly, such as trying to take a corner too fast or making a sudden lane change. Always drive at a safe speed for the road and weather conditions.

ABS cannot prevent a loss of stability. Always steer moderately when you are braking hard. Severe or sharp steering wheel movement can still cause your vehicle to veer into oncoming traffic or off the road.

A vehicle with ABS may require a longer distance to stop on loose or uneven surfaces, such as gravel or snow, than a vehicle without anti-lock.
Your vehicle is equipped with a tire pressure monitoring system (TPMS) that turns on every time you start the engine and monitors the pressure in your tires while driving.

Each tire has its own pressure sensor. If the air pressure of a tire becomes significantly low, the sensor in that tire immediately sends a signal that causes the low tire pressure indicator to come on.

Although your tire pressure is monitored, you must manually check the tire pressures monthly.

Each tire, including the spare, should be checked monthly when the vehicle is cold, and set to the recommended inflation pressure as specified on the vehicle placard and in the owner's manual (see page 311).

Driving on a significantly under-inflated tire causes the tire to overheat and can lead to tire failure. Under-inflation also reduces fuel efficiency and tire tread life, and may affect the vehicle's handling and stopping ability.

When the low tire pressure indicator is on, one or more of your tires is significantly underinflated. You should stop and check your tires as soon as possible, and inflate them to the proper pressure as indicated on the vehicle’s tire information placard.

With this indicator on, you will see which tire is losing the pressure on the multi-information display along with a “CHECK TIRE PRESSURE” message (see page 259).
Because tire pressure varies by temperature and other conditions, the low tire pressure indicator may come on unexpectedly.

For example, if you check and fill your tires in a warm area, then drive in extremely cold weather, the tire pressure will be lower than measured and could be underinflated and cause the low tire pressure indicator to come on. Or, if you check and adjust your tire pressure in cooler conditions, and drive into extremely hot conditions, the tire may become overinflated. However, the low tire pressure indicator will not come on if the tires are overinflated.

Refer to page 310 for tire inflation guidelines.

Tire Pressure Monitor

To display the tire pressure monitor, press the INFO button until it appears on the multi-information display.

When all tire pressures are normal, the tire pressure monitor will show a “TIRE PRESSURE OK” message.

When any of the tires have low pressure, the tire pressure monitor shows a “TIRE PRESSURE ERROR” message.
When any of the tires have low pressure, the low tire pressure indicator on the instrument panel comes on, and the multi-information display also interrupts the current display and shows a “CHECK TIRE PRESSURE” message. You can see one or more of the low pressure tire positions highlighted in the display along with this message.

When the TPMS is functioning normally, you can see the tire pressure readings of each tire in psi (U.S. models) or kPa (Canadian models) by pressing the SEL/RESET button while the multi-information display shows the tire pressure monitor.

It is possible that the pressures shown on the multi-information display and the pressures you manually measure are slightly different. If the difference is significant or you cannot make the low tire pressure indicator and message on the multi-information display go out after inflating the tires to the specified values, have your dealer check the system as soon as possible.
Tire Pressure Monitoring System (TPMS)

Changing a Tire with TPMS
If you have a flat tire, the low tire indicator and tire pressure monitor will come on. Replace the indicated flat tire with the compact spare tire (see page 321).

After you replace the flat tire with the spare, the low tire pressure indicator stays on. This is normal; the system is not monitoring the spare tire pressure. Manually check the spare tire pressure to be sure it is correct.

Never use a puncture-repairing agent in a flat tire. If used, you will have to replace the tire pressure sensor. Have the flat tire repaired by your dealer as soon as possible.

Each wheel is equipped with a tire pressure sensor mounted inside the tire behind the valve stem. You must use TPMS specific wheels. It is recommended that you always have your tires serviced by your dealer or a qualified technician.

Check TPMS System Message
If there is a problem with the TPMS, the multi-information display shows a “CHECK TPMS SYSTEM” message.
If you see this message, the tire pressure monitor shows a “SYSTEM FUNCTION ERROR” message. The system may not be able to detect or signal low tire pressure as intended. Also, the tire pressure readings will not be displayed. Have your vehicle checked by a dealer as soon as possible.

As required by the FCC:
This device complies with Part 15 of the FCC rules. Operation is subject to the following two conditions: (1) This device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

Changes or modifications not expressly approved by the party responsible for compliance could void the user’s authority to operate the equipment.

This device complies with Industry Canada Standard RSS-210. Operation is subject to the following two conditions: (1) this device may not cause interference, and (2) this device must accept any interference that may cause undesired operation of the device.
Vehicle Stability Assist (VSA) System

The vehicle stability assist (VSA) system helps to stabilize the vehicle during cornering if the vehicle turns more or less than desired. It also assists you in maintaining traction while accelerating on loose or slippery road surfaces. It does this by regulating the engine’s output and by selectively applying the brakes.

When VSA activates, you may notice that the engine does not respond to the accelerator in the same way it does at other times. You will also see the VSA activation indicator blink.

The VSA system cannot enhance the vehicle’s driving stability in all situations and does not control your vehicle’s entire braking system. It is still your responsibility to drive and corner at reasonable speeds and to leave a sufficient margin of safety.

⚠️ **VSA Activation Indicator**
When VSA activates, you will see the VSA activation indicator blink (see page 65).

Vehicle Stability Assist (VSA) System Indicator
If this indicator comes on while driving, pull to the side of the road when it is safe, and turn off the engine. Reset the system by restarting the engine. If the VSA system indicator stays on, or comes back on while driving, have the VSA system inspected by your dealer.

If the indicator does not come on when the ignition switch is turned to the ON (II) position, there may be a problem with the VSA system. Have your dealer inspect your vehicle as soon as possible.

When the VSA system indicator comes on, you will also see a “CHECK VSA SYSTEM” message on the multi-information display.

Without VSA, your vehicle will have normal braking and cornering ability, but it will not have VSA traction and stability enhancement.
Vehicle Stability Assist (VSA) System

VSA Off Switch
In certain unusual conditions when your vehicle gets stuck in shallow mud or fresh snow, it may be easier to free it with the VSA temporarily switched off. When the VSA system is off, the traction control system is also off. You should only attempt to free your vehicle with the VSA off if you are not able to free it when the VSA is on.

Immediately after freeing your vehicle, be sure to switch the VSA on again. We do not recommend driving your vehicle with the VSA and traction control systems switched off.

This switch is under the left vent. Press it to turn the vehicle stability assist system on and off.

When VSA is off, the VSA activation indicator comes on as a reminder.

VSA is turned on every time you start the engine, even if you turned it off the last time you drove the vehicle.

VSA and Tire Sizes
Driving with varying tire or wheel sizes may cause the VSA to malfunction. When replacing tires, make sure they are of the same size and type as your original tires (see page 314).

Deactivate the VSA system if you need to drive with the compact spare tire installed (see page 320).

If you install winter tires, make sure they are the same size as those that were originally supplied with your vehicle. Exercise the same caution during winter driving as you would if your vehicle was not equipped with VSA.
Your vehicle has been designed primarily to carry passengers and their cargo. You can also use it to tow a trailer if you carefully observe the load limits, use the proper equipment, and follow the guidelines in this section.

**WARNING**

Exceeding any load limit or improperly loading your vehicle and trailer can cause a crash in which you can be seriously hurt or killed.

Check the loading of your vehicle and trailer carefully before starting to drive.

**Load Limits**

<table>
<thead>
<tr>
<th>Total Trailer Weight: The maximum allowable weight of the trailer and everything in or on it must not exceed 1,000 lbs (450 kg).</th>
<th>Tongue Load: The weight that the tongue of a fully-loaded trailer puts on the hitch should be approximately 10% of the total trailer weight. Too much tongue load reduces front-tire traction and steering control. Too little tongue load can make the trailer unstable and cause it to sway.</th>
</tr>
</thead>
<tbody>
<tr>
<td><img src="image1.jpg" alt="Weight Scale" /></td>
<td><img src="image2.jpg" alt="Tongue Load" /></td>
</tr>
</tbody>
</table>

Towing a Trailer
To achieve a proper tongue load, start by loading 60% of the load toward the front of the trailer and 40% toward the rear, then re-adjust the load as needed.

- **Gross Vehicle Weight Rating (GVWR):**
  The maximum allowable weight of the vehicle, all occupants, all accessories, all cargo, and the tongue load is:

  4,300 lbs (1,950 kg)

- **Gross Axle Weight Rating (GAWR):**
  The maximum allowable weight of the vehicle axles is:

  - 2,335 lbs (1,060 kg) on the front axle
  - 2,030 lbs (920 kg) on the rear axle

**Checking Loads**

The best way to confirm that vehicle and trailer weights are within limits is to have them checked at a public scale.

Using a suitable scale or a special tongue load gauge, check the tongue load the first time you set up a towing combination (a fully-loaded vehicle and trailer), then recheck the tongue load whenever the conditions change.
Towing a Trailer

Towing Equipment and Accessories
Towing generally requires a variety of supplemental equipment, depending on the size of your trailer, how much load you are towing, and where you tow. To ensure the best quality, we recommend that you purchase Acura equipment whenever possible.

Discuss your needs with your trailer sales or rental agency, and follow the guidelines in the rest of this section. Also make sure that all equipment is properly installed and maintained, and that it meets federal, state, province, and local regulations.

Hitches
Any hitch used on your vehicle must be properly bolted to the underbody.

Safety Chains
Always use safety chains when you tow a trailer. Make sure the chains are secured to the trailer and hitch, and that they cross under the tongue and can catch the trailer if it becomes unhitched. Leave enough slack to allow the trailer to turn corners easily, but do not let the chains drag on the ground.

Trailer Brakes
Acura recommends that any trailer having a total weight of 1,000 lbs (450 kg) or more be equipped with its own electric or surge-type brakes.

If you choose electric brakes, be sure they are electronically actuated. Do not attempt to tap into your vehicle’s hydraulic system. No matter how successful it may seem, any attempt to attach trailer brakes to your vehicle’s hydraulic system will lower braking effectiveness and create a potential hazard.

See your trailer dealer or rental agency for more information on installing electric brakes.
Many states and Canadian provinces require special outside mirrors when towing a trailer. Even if they don’t, you should install special mirrors if you cannot clearly see behind you, or if the trailer creates a blind spot.

Ask your trailer sales or rental agency if any other items are recommended or required for your towing situation.

**Trailer Lights**

Trailer lights and equipment must comply with federal, state, province, and local regulations. Check the requirements for the areas where you plan to tow, and use only equipment designed for your vehicle.

Since lighting and wiring vary by trailer type and brand, you should have a qualified technician install a suitable connector between the vehicle and the trailer. Improper equipment or installation can cause damage to your vehicle’s electrical system and affect your vehicle warranty.

**Additional Towing Equipment**

Many states and Canadian provinces require special outside mirrors when towing a trailer. Even if they don’t, you should install special mirrors if you cannot clearly see behind you, or if the trailer creates a blind spot.
Pre-Tow Checklist
When preparing to tow, and before driving away, be sure to check the following:

- The vehicle has been properly serviced, and the suspension, cooling system, and lights are in good operating condition.
- All weights and loads are within limits (see pages 264 and 265).
- The hitch, safety chains, and any other attachments are secure.
- All items in or on the trailer are properly secured and cannot shift while you drive.
- The lights and brakes on your vehicle and the trailer are working properly.

- Your vehicle tires and spare are properly inflated (see page 311), and the trailer tires and spare are inflated as recommended by the trailer maker.

Handling Crosswinds and Buffeting
Crosswinds and air turbulence caused by passing trucks can disrupt your steering and cause the trailer to sway. When being passed by a large vehicle, keep a constant speed, and steer straight ahead. Do not try to make quick steering or braking corrections.

Backing Up
Always drive slowly and have someone guide you when backing up. Grip the bottom of the steering wheel; then turn the wheel to the left to get the trailer to move to the left, and turn the wheel right to move the trailer to the right.

Parking
Follow all normal precautions when parking, including firmly setting the parking brake and putting the transmission in Park (automatic) or in first or reverse (manual). Also, place wheel chocks at each of the trailer’s tires.
Driving Safely With a Trailer
The added weight, length, and height of a trailer will affect your vehicle’s handling and performance, so driving with a trailer requires some special driving skills and techniques.

For your safety and the safety of others, take time to practice driving maneuvers before heading for the open road, and follow the guidelines below.

Towing Speeds and Gears
Drive slower than normal in all driving situations, and obey posted speed limits for vehicles with trailers. If you have an automatic transmission, use D position when towing a trailer on level roads. D3 is the proper shift lever position to use when towing a trailer in hilly terrain. (See “Driving on Hills” in the next column for additional gear information.)

Making Turns and Braking
Make turns more slowly and wider than normal. The trailer tracks a smaller arc than your vehicle, and it can hit or run over something the vehicle misses. Allow more time and distance for braking. Do not brake or turn suddenly as this could cause the trailer to jackknife or turn over.

Driving on Hills
When climbing hills, closely watch your temperature gauge. If it nears the red (Hot) mark, turn the air conditioning off, reduce speed and, if necessary, pull to the side of the road to let the engine cool.

If the automatic transmission shifts frequently while going up a hill, shift to D3.

If you must stop when facing uphill, use the foot brake or parking brake. Do not try to hold the vehicle in place by pressing on the accelerator, as this can cause the automatic transmission to overheat.

When driving down hills, reduce your speed, and shift down to second gear. Do not “ride” the brakes, and remember, it will take longer to slow down and stop when towing a trailer.

Driving
Safely
With
a
Trailer
This section explains why it is important to keep your vehicle well maintained and how to follow basic maintenance safety precautions.

This section also includes instructions on how to read the maintenance messages on the multi-information display, a maintenance record, and instructions for simple maintenance tasks you may want to take care of yourself.

If you have the skills and tools to perform more complex maintenance tasks on your vehicle, you may want to purchase the service manual. See page 361 for information on how to obtain a copy, or see your dealer.

All service items not detailed in this section should be performed by a certified technician or other qualified mechanic.

**Important Safety Precautions**
To eliminate potential hazards, read the instructions before you begin, and make sure you have the tools and skills required.

- Make sure your vehicle is parked on level ground, the parking brake is set, and the engine is off.
- To clean parts, use a commercially available degreaser or parts cleaner, not gasoline.
- To reduce the possibility of fire or explosion, keep cigarettes, sparks, and flames away from the battery and all fuel-related parts.
- Wear eye protection and protective clothing when working near the battery or when using compressed air.

**WARNING**
Improperly maintaining this vehicle, or failing to correct a problem before driving can cause a crash in which you can be seriously hurt or killed.

Always follow the inspection and maintenance recommendations and schedules in this owner's manual.
Be sure there is adequate ventilation whenever you operate the engine.

Let the engine and exhaust system cool down before touching any parts.

Do not run the engine unless instructed to do so.

**Potential Vehicle Hazards**

- **Carbon Monoxide poison from engine exhaust.** Be sure there is adequate ventilation whenever you operate the engine.

- **Burns from hot parts.** Let the engine and exhaust system cool down before touching any parts.

- **Injury from moving parts.** Do not run the engine unless instructed to do so.

**WARNING**

Failure to properly follow maintenance instructions and precautions can cause you to be seriously hurt or killed.

Always follow the procedures and precautions in this owner’s manual.

Some of the most important safety precautions are given here. However, we cannot warn you of every conceivable hazard that can arise in performing maintenance. Only you can decide whether or not you should perform a given task.
To see the current engine oil life displayed on the lower segment of the multi-information display, turn the ignition switch to the ON (II) position, and press the SEL/RESET button on the steering wheel repeatedly until engine oil life is displayed.

The remaining engine oil life is shown on the display according to this table:

<table>
<thead>
<tr>
<th>Calculated Engine Oil Life (%)</th>

Your vehicle displays engine oil life and maintenance service items on the multi-information display to show you when you should have your dealer perform engine oil replacement and indicated maintenance service.

Based on the engine operating conditions and accumulated engine revolutions, the onboard computer in your vehicle calculates the remaining engine oil life and displays it as a percentage.
When the remaining engine oil life is 15 to 6%, the multi-information display shows a “SERVICE DUE SOON” message along with the maintenance item code(s) indicating the main and sub items required at the time of the oil change. Refer to page 283 for a complete list of the maintenance main items and sub items.

To cancel the message, press the INFO button on the steering wheel.

When the message appears, the system message indicator also comes on (see page 75). Even after you press the INFO button to cancel the message, the indicator continues to stay on until you have the service performed.

After the message on the multi-information display is canceled by pressing the INFO button, the engine oil life display will appear in the lower segment. You will see the percentage of the remaining engine oil life and the maintenance item code(s) displayed.

CONTINUED
To cancel the engine oil life display, press the SEL/RESET button to return to the previous display.

The message appears on the multi-information display each time you turn the ignition switch to the ON (II) position. After canceling the message, the engine oil life display will appear in the lower segment. This continues until you have the indicated maintenance done by your dealer.

When the remaining oil life is 5 to 1%, the multi-information display shows a “SERVICE DUE NOW” message. The display also shows the same maintenance items that were previously shown with “SERVICE DUE SOON.” Make sure you have the indicated maintenance performed as soon as possible.

After have the service is performed, make sure to reset the display as described on page 277.

To cancel the message, press the INFO button on the steering wheel. To see the message again, wait for an interval for more than 5 seconds, and then press the INFO button.
If maintenance service is done by someone other than your dealer, reset the maintenance minder as follows:

1. Turn the ignition switch to the ON (II) position.
2. If the engine oil life display is not displayed, press the SEL/RESET button on the steering wheel repeatedly until it comes back.
3. Press and hold the SEL/RESET button on the steering wheel for more than 10 seconds. The remaining engine oil life reset mode will be shown on the multi-information display.
   - To reset the engine oil life, press the INFO button on the steering wheel to select “RESET” on the display, and press the SEL/RESET button.

Your dealer will reset the display after completing the required maintenance service. You will see “OIL LIFE 100 %” on the lower segment of the multi-information display and the maintenance item code(s) erased the next time you turn the ignition switch to the ON (II) position.

If maintenance service is done by someone other than your dealer, reset the maintenance minder as follows:

1. Turn the ignition switch to the ON (II) position.
2. If the engine oil life display is not displayed, press the SEL/RESET button on the steering wheel repeatedly until it comes back.
3. Press and hold the SEL/RESET button on the steering wheel for more than 10 seconds. The remaining engine oil life reset mode will be shown on the multi-information display.
   - To reset the engine oil life, press the INFO button on the steering wheel to select “RESET” on the display, and press the SEL/RESET button.

After the message on the multi-information display is canceled by pressing the INFO button, the engine oil life display will appear in the lower segment. You will see a “SERVICE” message along with the percentage of the remaining engine oil life and the maintenance item code(s) displayed.

To cancel the engine oil life display, press the SEL/RESET button to return to the previous display.

**“SERVICE” MESSAGE**

[Image of multi-information display showing “SERVICE OIL LIFE 5% A1”]

[Image of multi-information display showing how to reset the engine oil life display]
If you do not complete the reset procedure within 30 seconds after selecting the reset mode, the mode will be canceled automatically.

If you have the required service performed but do not reset the display, or reset the display without performing the service, the system will not show the proper maintenance intervals. This can lead to serious mechanical problems because you will no longer have an accurate record of when maintenance is needed.

To cancel resetting the oil life, press the INFO button on the steering wheel to select “CANCEL” on the display, and press the SEL/RESET button.

Immediately have the service performed, and make sure to reset the display as previously described.

To cancel the message, press the INFO button on the steering wheel. To see the message again, wait for an interval for more than 5 seconds, and then press the INFO button.

If the indicated maintenance service is not done and the remaining engine oil life reaches 0%, the multi-information display will show the message “SERVICE PAST DUE” and the maintenance item code(s). This message is displayed when the total mileage is less than 10 miles (for U.S. models) or 10 km (for Canadian models) after the engine oil life became 0%.
Also, the percentage “0 %” keeps blinking on the display.

This particular message is displayed when the mileage is less than 10 miles (for U.S. models) or 10 km (for Canadian models) after the engine oil life became 0%.

To cancel the engine oil life display, press the SEL/RESET button to return to the previous display.

After the message on the multi-information display is canceled by pressing the INFO button, the engine oil life display will appear in the lower segment. You will see a “SERVICE” message along with the percentage “0%” and the maintenance item code(s) displayed.

If the indicated required service is not done and the remaining engine oil life becomes 0%, the multi-information display will show a “SERVICE PAST DUE” message, the total mileage after the remaining oil life became 0%, and the maintenance item code(s).
After the message on the multi-information display is canceled by pressing the INFO button, the engine oil life display will appear in the lower segment. You will see a “SERVICE” message along with the maintenance item code(s), and the total negative mileage after the oil life becomes 0% is displayed.

Immediately have the service performed, and make sure to reset the display as previously described.

To cancel the message, press the INFO button on the steering wheel. To see the message again, wait for an interval of more than 5 seconds, and then press the INFO button.

Also, the total negative mileage keeps blinking on the display.

This particular message is displayed when you drive over 10 miles (for U.S. models) or 10 km (for Canadian models) after seeing the 0% message.

To cancel the engine oil life display, press the SEL/RESET button to return to the previous display.

Maintenance Minder
However, service at a dealer is not mandatory to keep your warranties in effect. Maintenance may be done by any qualified service facility or person who is skilled in this type of automotive service. Make sure to have the service facility or person reset the display as previously described. Keep all receipts as proof of completion, and have the person who does the work fill out the maintenance record. Check your warranty booklet for more information.

U.S. Vehicles:
Maintenance, replacement, or repair of emissions control devices and systems may be done by any automotive repair establishment or individual using parts that are “certified” to EPA standards.

According to state and federal regulations, failure to perform maintenance on the items marked with # will not void your emissions warranties. However, all maintenance services should be performed in accordance with the intervals indicated by the information display.

Important Maintenance Precautions
If you have the required service done but do not reset the display, or reset the display without doing the service, the system will not show the proper maintenance intervals. This can lead to serious mechanical problems because you will no longer have an accurate record of when maintenance is needed.

Your authorized Acura dealer knows your vehicle best and can provide competent, efficient service.

We recommend the use of Acura parts and fluids whenever you have maintenance done. These are manufactured to the same high-quality standards as the original components, so you can be confident of their performance and durability.
**Owner’s Maintenance Checks**

You should check the following items at the specified intervals. If you are unsure of how to perform any check, turn to the appropriate page listed.

- **Engine oil level** — Check every time you fill the fuel tank. See page 234.

- **Engine coolant level** — Check the radiator reserve tank every time you fill the fuel tank. See page 234.

- **Automatic transmission** — Check the fluid level monthly. See pages 293 – 294.

- **Brakes** — Check the fluid level monthly. See page 296.

- **Tires** — Check the tire pressure monthly. Examine the tread for wear and foreign objects. See page 312.

- **Lights** — Check the operation of the headlights, parking lights, taillights, high-mount brake light, and license plate lights monthly. See page 298.

### Symbol Legend

| 1   | Rotate tires |
| 2   | Replace air cleaner element |
| 3   | Replace transmission fluid |

### Maintenance Minder Notes

- If the message “SERVICE DUE NOW” does not appear more than 12 months after the display is reset, change the engine oil every year.

- Independent of the maintenance messages in the multi-information display, replace the brake fluid every 3 years.
- Inspect idle speed every 160,000 miles (256,000 km).
- Adjust the valves during services A, B, 1, 2, or 3 only if they are noisy.

- Visual inspection of the multi-information display is recommended at every 30,000 miles (48,000 km).

### Independent Maintenance Items

- Replace spark plugs
- Inspect valve clearance
- Replace engine coolant

### Additional Information

- See information on maintenance and emissions warranty in the first column on page 361.
You or the servicing dealer can record all completed maintenance here. When maintenance is performed, record the mileage, circle the coded item(s) completed, and write in any other non-coded items (such as brake fluid replacement) below the codes. Keep the receipts for all work done on your vehicle. Maintenance can also be recorded in your Acura maintenance journal.

Fluid Locations

- **RADIATOR CAP**
- **CLUTCH FLUID** (Manual Transmission only) (Light gray cap)
- **AUTOMATIC TRANSMISSION FLUID DIPSTICK** (Yellow loop)
- **ENGINE OIL FILL CAP**
- **ENGINE COOLANT RESERVOIR**
- **BRAKE FLUID** (Black cap)
- **ENGINE OIL DIPSTICK** (Orange handle)
- **WASHER FLUID** (Blue cap)
- **POWER STEERING FLUID** (Red cap)
Unscrew and remove the engine oil fill cap on top of the valve cover. Pour in the oil slowly and carefully so you do not spill any. Clean up any spills immediately. Spilled oil could damage components in the engine compartment.

Reinstall the engine oil fill cap, and tighten it securely. Wait a few minutes, and recheck the oil level on the engine oil dipstick. Do not fill above the upper mark; you could damage the engine.

Recommended Engine Oil
Oil is a major contributor to your engine’s performance and longevity. Always use a premium-grade detergent oil displaying the API Certification Seal. This seal indicates the oil is energy conserving and that it meets the American Petroleum Institute’s latest requirements. It is highly recommended that you use Honda Motor Oil in your vehicle for as long as you own it.
Your vehicle does not require any oil additives. Additives may adversely affect the engine or transmission performance and durability.

Make sure the API Certification Seal says “For Gasoline Engines.”

An oil with a viscosity of 5W-30 is preferred for improved fuel economy and year-round protection in your vehicle. You may use a 10W-30 oil if the temperature in your area never goes below 0°F (−20 °C).

Synthetic Oil
You may use a synthetic motor oil if it meets the same requirements given for a conventional motor oil: it displays the API Certification Seal and it is the proper weight. You must follow the oil and filter change intervals shown on the multi-information display.

Engine Oil Additives
Your vehicle does not require any oil additives. Additives may adversely affect the engine or transmission performance and durability.
Always change the oil and filter according to the maintenance messages shown on the multi-information display. The oil and filter collect contaminants that can damage your engine if they are not removed regularly.

Changing the oil and filter requires special tools and access from underneath the vehicle. The vehicle should be raised on a service station-type hydraulic lift for this service. Unless you have the knowledge and proper equipment, you should have this maintenance done by a skilled technician.

1. Run the engine until it reaches normal operating temperature, then shut it off.
2. Open the hood and remove the engine oil fill cap.
3. Remove the bolt located on the underside of the body with a wrench, then remove the maintenance cover.
4. Remove the oil drain bolt and washer from the bottom of the engine. Drain the oil into an appropriate container.
5. Remove the oil filter and let the remaining oil drain. A special wrench (available from your dealer) is required.

CONTINUED
Changing the Oil and Filter

6. Check the oil filter to make sure its gasket did not stick to the filter base. A stuck gasket could cause an oil leak.

7. Install a new oil filter according to the instructions that come with it. Make sure to clean off any dirt and dust on the connecting surface of a new oil filter.

8. Put a new washer on the drain bolt, then reinstall the drain bolt. Tighten it to:
   33 lbf\(\cdot\)ft (45 N\(\cdot\)m , 4.6 kgf\(\cdot\)m)

9. Refill the engine with the recommended oil.

   Engine oil change capacity (including filter):
   4.4 US qt (4.2 l)

10. Replace the engine oil fill cap. Start the engine. The oil pressure indicator should go out within 5 seconds. If it does not, turn off the engine, and check your work.

11. Let the engine run for several minutes, then check the drain bolt and oil filter for leaks.

12. Turn off the engine, let it sit for several minutes, then check the oil level on the dipstick. If necessary, add more oil.

13. Install the maintenance cover and tighten the bolt securely.

**NOTICE**

Improper disposal of engine oil can be harmful to the environment. If you change your own oil, please dispose of the used oil properly. Put it in a sealed container and take it to a recycling center. Do not discard it in a trash bin or dump it on the ground.
If the reserve tank is completely empty, you should also check the coolant level in the radiator.

Adding Engine Coolant

If the coolant level in the reserve tank is at or below the MIN line, add coolant to bring it up to the MAX line. Inspect the cooling system for leaks.

Always use Honda Long-Life Antifreeze/Coolant Type 2. This coolant is pre-mixed with 50% antifreeze and 50% water. Never add straight antifreeze or plain water.

If Honda antifreeze/coolant is not available, you may use another major-brand non-silicate coolant as a temporary replacement. Make sure it is a high-quality coolant recommended for aluminum engines. Continued use of any non-Honda coolant can result in corrosion, causing the cooling system to malfunction or fail. Have the cooling system flushed and refilled with Honda antifreeze/coolant as soon as possible.

WARNING

Removing the radiator cap while the engine is hot can cause the coolant to spray out, seriously scalding you.

Always let the engine and radiator cool down before removing the radiator cap.
Engine Coolant, Windshield Washers

1. Make sure the engine and radiator are cool.

2. Relieve any pressure in the cooling system by turning the radiator cap counterclockwise, without pressing down.

3. Remove the radiator cap by pushing down and turning counterclockwise.

4. The coolant level should be up to the base of the filler neck. Add coolant if it is low.

   Pour the coolant slowly and carefully so you do not spill any. Clean up any spill immediately; it could damage components in the engine compartment.

5. Put the radiator cap back on, and tighten it fully.

6. Pour coolant into the reserve tank. Fill it to halfway between the MAX and MIN marks. Put the cap back on the reserve tank.

   Do not add any rust inhibitors or other additives to your vehicle’s cooling system. They may not be compatible with the coolant or engine components.

Windshield Washers

Check the fluid level in the windshield washer reservoir at least monthly during normal use.

Check the reservoir’s fluid level by removing the cap and looking at the level gauge attached to the cap.
If the washer fluid is low, a "WASHER FLUID LOW" message appears on the multi-information display.

Fill the reservoir with a good-quality windshield washer fluid. This increases the cleaning capability and prevents freezing in cold weather.

When you refill the reservoir, clean the edges of the windshield wiper blades with windshield washer fluid on a clean cloth. This will help to condition the blade edges.

**Notice**

Do not use engine antifreeze or a vinegar/water solution in the windshield washer reservoir. Antifreeze can damage your vehicle's paint, while a vinegar/water solution can damage the windshield washer pump. Use only commercially-available windshield washer fluid.

Automatic Transmission

Check the fluid level with the engine at normal operating temperature.

1. Park the vehicle on level ground. Start the engine and let it run until the radiator fan comes on, then shut off the engine. For accurate results, wait about 60 seconds before going to step 2, but don't wait longer than 90 seconds.

**continued**
Transmission Fluid

2. Remove the dipstick (yellow loop) from the transmission, and wipe it with a clean cloth.

3. Insert the dipstick all the way back into the transmission securely as shown in the illustration.

Make sure the rubber cap on the dipstick fits in the dipstick guide and that you push the dipstick in all the way.

4. Remove the dipstick and check the fluid level. It should be between the upper and lower marks.

5. If the level is below the lower mark, add fluid into the dipstick hole to bring it to the level between the upper and lower marks.

Pour the fluid slowly and carefully so you do not spill any. Clean up any spill immediately; it could damage components in the engine compartment.

Always use Honda ATF-Z1 (automatic transmission fluid). If it’s not available, you may use a DEXRON® III automatic transmission fluid as a temporary replacement. However, continued use can affect the shift quality. Have the transmission flushed and refilled with Honda ATF-Z1 as soon as it is convenient.

6. Insert the dipstick all the way back into the transmission securely as shown in the illustration.

If you are not sure how to add fluid, contact your dealer.
Transmission Fluid

Check the fluid level with the transmission at normal operating temperature and the vehicle sitting on level ground. Remove the transmission filler bolt, and carefully feel inside the bolt hole with your finger. The fluid level should be up to the edge of the bolt hole. If it is not, add Honda Manual Transmission Fluid (MTF) until it starts to run out of the hole. Reinstall the filler bolt, and tighten it securely.

If Honda MTF is not available, you may use an SAE 10W-30 or 10W-40 viscosity motor oil with the API Certification seal that says “FOR GASOLINE ENGINES” as a temporary replacement. However, motor oil does not contain the proper additives, and continued use can cause stiffer shifting. Replace as soon as it is convenient.

If you are not sure how to add fluid, contact your dealer.
Check the fluid level in the reservoirs monthly. There are up to two reservoirs, depending on the model. They are:

- Brake fluid reservoir (all models)
- Clutch fluid reservoir (manual transmission models only)

Replace the brake fluid every 3 years, independent of mileage.

Always use Honda Heavy Duty Brake Fluid DOT 3. If it is not available, you should use only DOT 3 or DOT 4 fluid, from a sealed container, as a temporary replacement.

Using any non-Honda brake fluid can cause corrosion and decrease the life of the system. Have the brake system flushed and refilled with Honda Heavy Duty Brake Fluid DOT 3 as soon as possible.

Brake fluid marked DOT 5 is not compatible with your vehicle’s braking system and can cause extensive damage.

The fluid level should be between the MIN and MAX marks on the side of the reservoir. If the level is at or below the MIN mark, your brake system needs attention. Have the brake system inspected for leaks or worn brake pads.
Check the level on the side of the reservoir when the engine is cold. The fluid should be between the UPPER LEVEL and LOWER LEVEL. If not, add power steering fluid to the UPPER LEVEL.

Pour the fluid slowly and carefully so you do not spill any. Clean up any spill immediately; it could damage components in the engine compartment.

Always use Honda Power Steering Fluid. You may use another power steering fluid as an emergency replacement, but have the power steering system flushed and refilled with Honda PSF as soon as possible.

A low power steering fluid level can indicate a leak in the system. Check the fluid level frequently, and have the system inspected as soon as possible.

**NOTICE**

*Turning the steering wheel to full left or right lock and holding it there can damage the power steering pump.*
**Headlight Aiming**
The headlights were properly aimed when your vehicle was new. If you regularly carry heavy items in the trunk or pull a trailer, readjustment may be required. Adjustments should be done by your dealer or other qualified mechanic.

**Low Beam Headlight Bulb Replacement**
The low beam headlight bulbs are a type of high voltage discharge tube. High voltage can remain in the circuit even with the light switch off and the key removed. Because of this, you should not attempt to examine or change a low beam headlight bulb yourself. If a low beam headlight bulb fails, take the vehicle to your dealer to have it replaced.

**Replacing a High Beam Headlight Bulb**
Your vehicle has halogen headlight bulbs, one on each side. When replacing a bulb, handle it by its steel base and protect the glass from contact with your skin or hard objects. If you touch the glass, clean it with denatured alcohol and a clean cloth.

**NOTICE**

*Halogen headlight bulbs get very hot when lit. Oil, perspiration, or a scratch on the glass can cause the bulb to overheat and shatter.*
1. Open the hood. To change a bulb on the driver’s side, undo the three fasteners and remove the air intake cover.

2. Remove the electrical connector from the bulb by pulling the connector straight back.

3. Remove the rubber weather seal by pulling on the tab.

4. Unclip the end of the hold-down wire from its slot. Pivot it out of the way, and remove the bulb socket.

5. Pull the burned out bulb straight out of its socket. Push the new bulb straight into the socket until it bottoms.

CONTINUED
6. Insert the socket back into the headlight assembly. Make sure the bulb is installed correctly by looking through the headlight lens. Pivot the hold-down wire back in place, and clip the end into the slot.

7. Install the rubber weather seal over the back of the headlight assembly. Make sure it is right side up; it is marked with an arrow.

8. Push the electrical connector onto the socket. Make sure it is connected securely.

9. Turn on the headlights to test the new bulb.

10. On the driver’s side, reinstall the air intake cover. Reinstall the three fasteners and secure them by pushing on the heads until they lock.

3. Pull the bulb straight out of its socket. Push the new bulb straight into the socket until it bottoms.

4. Insert the socket back into the headlight assembly. Turn it clockwise to lock it in place.

5. Turn on the lights to test the new bulb.

1. Open the hood.

2. Remove the socket from the headlight assembly by turning it one-quarter turn counterclockwise.

Replacing the Turn Signal Light Bulb
Replacing a Front Side Marker/ Front Parking Light Bulb

1. To change the bulb on the driver's side, start the engine, turn the steering wheel all the way to the right, then turn off the engine. To change the bulb on the passenger's side, turn the steering wheel to the left.

2. Use a flat-tipped screwdriver to remove the two holding clips from the inner fender.

3. Pull the inner fender cover away from the fender and bumper.

4. Remove the socket from the headlight assembly by turning it one-quarter turn counterclockwise.

5. Pull the bulb straight out of its socket. Push the new bulb straight into the socket until it bottoms.

CONTINUED
6. Insert the socket back into the headlight assembly. Turn it clockwise to lock it in place.

7. Turn on the lights to test the new bulb.

8. Put the inner fender cover in place. Install and lock each holding clip by pushing on the center.

---

**Replacing Rear Bulbs (In Fenders)**

1. Open the trunk.

2. Remove the light assembly cover by pulling its outside edge.

3. Remove the socket by turning it one-quarter turn counterclockwise, and pull the bulb straight out of its socket.

4. Push a new bulb straight into the socket until it bottoms, and reinstall the socket into the light assembly by turning it clockwise until it locks.

5. Test the new bulb to make sure it works.

6. Reinstall the light assembly cover.
Replacing Rear Bulbs (in Trunk Lid)

1. Open the trunk.
2. To replace a bulb on the right side, remove the trim clip. For the left side, remove the two trim clips.
3. Pull the lining back carefully.
4. Determine which of the two bulbs is burned out: taillight or back-up light.
5. Remove the socket by turning it one-quarter turn counterclockwise.
6. Pull the bulb straight out of its socket. Push the new bulb straight into the socket until it bottoms.
7. Insert the socket back into the light assembly. Turn it clockwise to lock it in place.
8. Turn on the lights to test the new bulb.
9. Reinstall the trunk lid trim. Make sure it is installed under the edge of the trunk lid seal.
10. Press the trim clips back into their holes.

Lights
Replacing a High-mount Brake Light Bulb

1. Open the trunk, and remove the socket from the light assembly by turning it one-quarter turn counterclockwise.

2. Remove the burned-out bulb by pulling it straight out of the socket.

3. Install the new bulb and reinstall the socket. Make sure the new bulb is working.

Side Turn Signal Light
Each outside mirror has side turn signal lights. The lights should be replaced by your dealer.

Rear License Plate Bulb
The license plate has two lights above it. The bulbs should be replaced by your dealer.

Replacing a Front Fog Light Bulb
Your vehicle uses halogen light bulbs. When replacing a bulb, handle it by its plastic case, and protect the glass from contact with your skin or hard objects. If you touch the glass, clean it with denatured alcohol and a clean cloth.

NOTICE

Halogen bulbs get very hot when lit. Oil, perspiration, or a scratch on the glass can cause the bulb to overheat and shatter.
1. Remove the undercover fixing bolt located under the front bumper.
2. Push up the undercover.
3. Remove the electrical connector from the bulb by pushing on the tab and pulling the connector down.
4. Remove the bulb from the fog light assembly by turning it one-quarter turn counterclockwise.
5. Install the new bulb into the hole and turn it one-quarter turn clockwise to lock it in place.
6. Push the electrical connector back onto the bulb. Make sure it is on all the way.
7. Turn on the fog lights to test the new bulb.
8. Put the undercover in place. Reinstall the fixing bolt and tighten it securely.
The floor mats that came with your vehicle hook over floor mat anchors. This keeps the floor mats from sliding forward/rearward and possibly interfering with the pedals or making the front passenger’s weight sensor’s ineffective.

Dirt build-up in the loops of the seat belt anchors can cause the belts to retract slowly. Wipe the insides of the loops with a clean cloth dampened in mild soap and warm water or isopropyl alcohol.

If your seat belts get dirty, use a soft brush with a mixture of mild soap and warm water to clean them. Do not use bleach, dye, or cleaning solvents. Let the belts air dry before you use the vehicle.
Floor Mats, Dust and Pollen Filter

If you remove a floor mat, make sure to re-anchor it when you put it back in your vehicle.

If you use a non-Acura floor mat, make sure it fits properly and that it can be used with the floor mat anchor. Do not put additional floor mats on top of the anchored mat.

Make sure the rear floor mats are properly hooked to the floor mat anchors. Your vehicle is equipped with front passenger’s seat weight sensors. If the rear passenger’s floor mat is on the seat rail of the front passenger’s seat, the sensors will detect the decreased weight on the seat, and they may not work properly.

Dust and Pollen Filter
This filter removes the dust and pollen that is brought in from the outside through the climate control system.

Have your dealer replace the filter when this service is indicated by a maintenance message on the multi-information display. It should be replaced every 15,000 miles (24,000 km) if you drive primarily in urban areas that have high concentrations of soot in the air, or if the flow from the climate control system becomes less than usual.
Check the condition of the wiper blades at least every six months. Look for signs of cracking in the rubber, or areas that are getting hard. Replace the blades if you find these signs, or if they leave streaks and unwiped areas when used.

To replace a wiper blade:

1. Raise each wiper arm off the windshield, lifting the driver’s side first, then the passenger’s side.

   **NOTICE**
   
   *Do not open the hood when the wiper arms are raised, or you will damage the hood and wiper arms.*

2. Disconnect the blade assembly from the wiper arm:
   - Press and hold the lock tab.
   - Slide the blade assembly toward the lock tab until it releases from the wiper arm.

When replacing a wiper blade, make sure not to drop the wiper blade or wiper arm down on the windshield.
3. Remove the blade from the blade assembly:
   • Find the side of the blade labeled “LOCK.” This is the side you pull out.
   • Pull back the end of the blade assembly on the “LOCK” side of the blade. Then grab the end of the blade, and slide it out.

4. Examine the new wiper blades. If they have no plastic or metal reinforcement along the back edge, remove the metal reinforcement strips from the old wiper blade, and install them in the slots along the edge of the new blade.

5. Install the new blade onto the blade assembly:
   • Pull back either end of the blade assembly.
   • Place the side of the blade not labeled “LOCK” on the end of the blade assembly, and slide the blade onto the assembly until it is fully installed.

6. Slide the wiper blade assembly onto the wiper arm. Make sure it locks in place.

7. Make sure the blade is completely installed and that its edge is not bunched up.

8. Lower the wiper arm down against the windshield, the passenger’s side first, then the driver’s side.
Wheels
Clean the wheels as you would the rest of the exterior. Wash them with the same solution, and rinse them thoroughly.

Aluminum alloy wheels have a protective clear-coat that keeps the aluminum from corroding and tarnishing. Cleaning the wheels with harsh chemicals (including some commercial wheel cleaners) or a stiff brush can damage the clear-coat. To clean the wheels, use a mild detergent and a soft brush or sponge.

Tires
To safely operate your vehicle, your tires must be the proper type and size, in good condition with adequate tread, and correctly inflated.

The following pages give more detailed information on how to take care of your tires and what to do when they need to be replaced.

**WARNING**

Using tires that are excessively worn or improperly inflated can cause a crash in which you can be seriously hurt or killed.

Follow all instructions in this owner’s manual regarding tire inflation and maintenance.

Inflation Guidelines
Keeping the tires properly inflated provides the best combination of handling, tread life, and riding comfort.

- Underinflated tires wear unevenly, adversely affect handling and fuel economy, and are more likely to fail from being overheated.
- Overinflated tires can make your vehicle ride more harshly, are more prone to damage from road hazards, and wear unevenly.

The tire pressure monitoring system (TPMS) will warn you when a tire pressure is low. See page 257 for information on the TPMS.
Even though your vehicle is equipped with TPMS, we recommend that you visually check your tires every day. If you think a tire might be low, check it immediately with a tire gauge.

Use a gauge to measure the air pressure in each tire at least once a month. Even tires that are in good condition may lose 1 to 2 psi (10 to 20 kPa, 0.1 to 0.2 kgf/cm²) per month. Remember to check the spare tire at the same time.

Check the pressure in the tires when they are cold. This means the vehicle has been parked for at least three hours, or driven less than 1 mile (1.6 km). Add or release air, if needed, to match the recommended cold tire pressure.

If you check air pressures when the tires are hot [driven for several miles (kilometers)], you will see readings 4 to 6 psi (30 to 40 kPa, 0.3 to 0.4 kgf/cm²) higher than the cold readings. This is normal. Do not let air out to match the recommended cold air pressure. The tire will be underinflated.

You should use your own tire pressure gauge and use it whenever you check your tire pressures. This will make it easier for you to tell if a pressure loss is due to a tire problem and not due to a variation between gauges.

While tubeless tires have some ability to self-seal if they are punctured, you should look closely for punctures if a tire starts losing pressure.

**Recommended Tire Pressures**

The following charts show the recommended cold tire pressures for most normal and high-speed driving conditions.

<table>
<thead>
<tr>
<th>Tire Size</th>
<th>Cold Tire Pressure for Normal Driving</th>
</tr>
</thead>
<tbody>
<tr>
<td>P215/50R17 93V</td>
<td>Front: 32 psi (220 kPa, 2.2 kgf/cm²)</td>
</tr>
<tr>
<td></td>
<td>Rear: 30 psi (210 kPa, 2.1 kgf/cm²)</td>
</tr>
</tbody>
</table>

The compact spare tire pressure is: 60 psi (420 kPa, 4.2 kgf/cm²)

For convenience, the recommended tire sizes and cold tire pressures are on a label on the driver’s doorjamb.

For additional information about your tires, see page 351.
Tire Inspection
Every time you check inflation, you should also examine the tires for damage, foreign objects, and wear.

You should look for:

- Bumps or bulges in the tread or side of the tire. Replace the tire if you find either of these conditions.
- Cuts, splits, or cracks in the side of the tire. Replace the tire if you can see fabric or cord.
- Excessive tread wear.

Tire Maintenance
In addition to proper inflation, correct wheel alignment helps to decrease tire wear. If you find a tire is worn unevenly, have your dealer check the wheel alignment.

Have your dealer check the tires if you feel a consistent vibration while driving. A tire should always be rebalanced if it is removed from the wheel. When you have new tires installed, make sure they are balanced. This increases riding comfort and tire life. For best results, have the installer perform a dynamic balance.

**NOTICE**

Improper wheel weights can damage your vehicle’s aluminum wheels. Use only genuine Acura wheels weights for balancing.
To help increase tire life and distribute wear more evenly, rotate the tires according to the maintenance messages displayed on the multi-information display. Move the tires to the positions shown in the illustration each time they are rotated. If you purchase directional tires, rotate only front-to-back.

**Tire Rotation**

**Replacing Tires and Wheels**

Replace your tires with radial tires of the same size, load range, speed rating, and maximum cold tire pressure rating (as shown on the tire's sidewall).

Mixing radial and bias-ply tires on your vehicle can reduce braking ability, traction, and steering accuracy. Using tires of a different size or construction can cause the ABS and vehicle stability assist system (VSA) to work inconsistently.

The ABS works by comparing the speed of the wheels. When replacing tires, use the same size originally supplied with the vehicle. Tire size and construction can affect wheel speed and may cause the system to activate.

It is best to replace all four tires at the same time. If that is not possible or necessary, replace the two front tires or two rear tires as a pair. Replacing just one tire can seriously affect your vehicle’s handling.

CONTINUED
If you ever replace a wheel, make sure that the wheel’s specifications match those of the original wheels.

Also be sure you use only TPMS specific wheels. If you do not, the tire pressure monitoring system will not work on that tire.

Replacement wheels are available at your dealer.

**WARNING**

Installing improper tires on your vehicle can affect handling and stability. This can cause a crash in which you can be seriously hurt or killed.

Always use the size and type of tires recommended in this owner’s manual.

**Wheel and Tire Specifications**

Wheel:

17 x 7 J (TPMS)

Tire:

P215/50R17 93V

See page 349 for DOT tire quality grading information, and page 348 for tire size information.

**Winter Driving**

Tires marked “M+S” or “All Season” on the sidewall have an all-weather tread design suitable for most winter driving conditions.

For the best performance in snowy or icy conditions, you should install snow tires or tire chains. They may be required by local laws under certain conditions.

**Snow Tires**

If you mount snow tires on your vehicle, make sure they are radial tires of the same size and load range as the original tires. Mount snow tires on all four wheels. The traction provided by snow tires on dry roads may be lower than your original tires. Check with the tire dealer for maximum speed recommendations.
When installing cables, follow the manufacturer’s instructions, and mount them as tight as you can. Make sure they are not contacting the brake lines or suspension. Drive slowly with them installed. If you hear them coming into contact with the body or chassis, stop and investigate. Remove them as soon as you begin driving on cleared roads.

**Tire Chains**
Mount tire chains on your tires when required by driving conditions or local laws. Install them only on the front tires.

Because your vehicle has limited tire clearance, Acura strongly recommends using the chains listed below, made by Security Chain Company (SCC).

Cable-type: SCC Radial Chain CH2412T

**WARNING**
Using the wrong chains, or not properly installing chains, can damage the brake lines and cause a crash in which you can be seriously injured or killed.

Follow all instructions in this owner’s manual regarding the selection and use of tire chains.

**NOTICE**
*Traction devices that are the wrong size or improperly installed can damage your vehicle’s brake lines, suspension, body, and wheels. Stop driving if they are hitting any part of the vehicle.*
Check the condition of the battery monthly by looking at the test indicator window. The label on the battery explains the test indicator's colors.

Check the terminals for corrosion (a white or yellowish powder). To remove it, cover the terminals with a solution of baking soda and water. It will bubble up and turn brown. When this stops, wash it off with plain water. Dry off the battery with a cloth or paper towel. Coat the terminals with grease to help prevent future corrosion.

If additional battery maintenance is needed, see your dealer or a qualified mechanic.

**WARNING:** Battery posts, terminals, and related accessories contain lead and lead compounds. ***Wash your hands after handling.***

If you need to connect the battery to a charger, disconnect both cables to prevent damaging your vehicle's electrical system. Always disconnect the negative (−) cable first, and reconnect it last.

**WARNING**

The battery gives off explosive hydrogen gas during normal operation.

A spark or flame can cause the battery to explode with enough force to kill or seriously hurt you.

Wear protective clothing and a face shield, or have a skilled technician do the battery maintenance.
If you need to park your vehicle for an extended period (more than 1 month), there are several things you should do to prepare it for storage. Proper preparation helps prevent deterioration and makes it easier to get your vehicle back on the road. If possible, store your vehicle indoors.

- Fill the fuel tank.
- Change the engine oil and filter.
- Wash and dry the exterior completely.
- Clean the interior. Make sure the carpeting, floor mats, etc., are completely dry.
- Block the rear wheels.
- If the vehicle is to be stored for a longer period, it should be supported on jackstands so the tires are off the ground.
- Leave one window open slightly (if the vehicle is being stored indoors).
- Disconnect the battery.
- Support the front wiper blade arms with a folded towel or rag so they do not touch the windshield.
- To minimize sticking, apply a silicone spray lubricant to all door and trunk seals. Also, apply a vehicle body wax to the painted surfaces that mate with the door and trunk seals.
- Leave the parking brake off. Put the transmission in reverse (manual) or Park (automatic).
- Cover the vehicle with a “breathable” cover, one made from a porous material such as cotton. Non-porous materials, such as plastic sheeting, trap moisture, which can damage the paint.
- If possible, periodically run the engine until it reaches full operating temperature (the cooling fans cycle on and off twice). Preferably, do this once a month.
This section covers the more common problems that motorists experience with their vehicles. It gives you information about how to safely evaluate the problem and what to do to correct it. If the problem has stranded you on the side of the road, you may be able to get going again. If not, you will also find instructions on getting your vehicle towed.

Emergency Towing .................. 341
Check the inflation pressure of the compact spare tire every time you check the other tires. It should be inflated to:

60 psi (420 kPa, 4.2 kgf/cm²)

Follow these precautions:

- Never exceed 50 mph (80 km/h).
- This tire gives a harsher ride and less traction on some road surfaces. Use greater caution while driving.

- Do not mount snow chains on the compact spare tire.
- Do not use the compact spare tire if you are towing a trailer.
- Do not use your compact spare tire on another vehicle unless it is the same make and model.
- Turn off the VSA system (see page 263). Driving with the compact spare tire may activate the VSA system.
- On models with manual transmission, do not drive for a long period with the compact spare tire mounted on a front wheel; it will damage the limited slip differential.

Replace the tire when you can see the tread wear indicator bars. The replacement should be the same size and design tire, mounted on the same wheel. The spare tire is not designed to be mounted on a regular wheel, and the spare wheel is not designed for mounting a regular tire.
Changing a Flat Tire

If you have a flat tire while driving, stop in a safe place to change it. Drive slowly along the shoulder until you get to an exit or an area that is far away from the traffic lanes.

**WARNING**

The vehicle can easily roll off the jack, seriously injuring anyone underneath.

Follow the directions for changing a tire exactly, and never get under the vehicle when it is supported only by the jack.

1. Park the vehicle on firm, level and non-slippery ground. Put the transmission in Park (automatic) or reverse (manual). Apply the parking brake.

2. Turn on the hazard warning lights, and turn the ignition switch to the LOCK (0) position. Have all passengers get out of the vehicle while you change the tire.
3. Open the trunk. Raise the trunk floor by lifting up on the back edge.

4. Take the tool tray out of the trunk, and remove the tools and the jack.

5. Unscrew the wing bolt and take the spare tire out of the trunk.

6. Loosen each wheel nut 1/2 turn with the wheel nut wrench.

7. Place the jack under the jacking point nearest the tire you need to change. Turn the end bracket clockwise until the top of the jack contacts the jacking point. Make sure the jacking point tab is resting in the jack notch.

8. Use the extension and the wheel nut wrench as shown to raise the vehicle until the flat tire is off the ground.

9. Remove the wheel nuts and flat tire. Handle the wheel nuts carefully; they may be hot from driving. Place the flat tire on the ground with the outside surface of the wheel facing up.
10. Before mounting the spare tire, wipe any dirt off the mounting surface of the wheel and hub with a clean cloth. Wipe the hub carefully; it may be hot from driving.

11. Put on the spare tire. Put the wheel nuts back on finger-tight, then tighten them in a crisscross pattern with the wheel nut wrench until the wheel is firmly against the hub. Do not try to tighten the wheel nuts fully.

12. Lower the vehicle to the ground, and remove the jack.

13. Tighten the wheel nuts securely in the same crisscross pattern. Have the wheel nut torque checked at the nearest automotive service facility. Tighten the wheel nuts to:

- 80 lbf-ft (108 N·m, 11 kgf·m)
Secure the flat tire by screwing the wing bolt back into its hole.

Store the jack and tools in the tool tray, and place the tool tray back in the trunk.

Store the wheel cover or center cap in the trunk. Make sure it does not get scratched or damaged.

Lower the trunk floor, then close the trunk lid.

Refer to Changing a Tire with TPMS (see page 260).

14. Remove the center cap before storing the flat tire in the trunk well.

15. Place the flat tire face down in the spare tire well.

16. Remove the spacer cone from the wing bolt, turn it over, and put it back on the bolt.

17. Secure the flat tire by screwing the wing bolt back into its hole.

18. Store the jack and tools in the tool tray, and place the tool tray back in the trunk.

**WARNING**

Loose items can fly around the interior in a crash and could seriously injure the occupants.

Store the wheel, jack, and tools securely before driving.

19. Store the wheel cover or center cap in the trunk. Make sure it does not get scratched or damaged. Lower the trunk floor, then close the trunk lid.

20. Refer to Changing a Tire with TPMS (see page 260).
When you turn the ignition switch to the START (III) position, you do not hear the normal noise of the engine trying to start. You may hear a clicking sound, a series of clicks, or nothing at all.

Diagnosing why the engine won’t start falls into two areas, depending on what you hear when you turn the ignition switch to the START (III) position:

- You hear nothing, or almost nothing. The engine’s starter motor does not operate at all, or operates very slowly.

- You can hear the starter motor operating normally, or the starter motor sounds like it is spinning faster than normal, but the engine does not start up and run.

**Nothing Happens or the Starter Motor Operates Very Slowly**

When you turn the ignition switch to the START (III) position, you do not hear the normal noise of the engine trying to start. You may hear a clicking sound, a series of clicks, or nothing at all.

Check these things:

- Check the transmission interlock. If you have a manual transmission, the clutch pedal must be pushed all the way to the floor or the starter will not operate. With an automatic transmission, it must be in Park or neutral.

- Turn the ignition switch to the ON (II) position. Turn on the headlights, and check their brightness. If the headlights are very dim or do not come on at all, the battery is discharged. See [Jump Starting](#) on page 327.

- Turn the ignition switch to the START (III) position. If the headlights do not dim, check the condition of the fuses. If the fuses are OK, there is probably something wrong with the electrical circuit for the ignition switch or starter motor. You will need a qualified technician to determine the problem. See [Emergency Towing](#) on page 341.

If the headlights dim noticeably or go out when you try to start the engine, either the battery is discharged or the connections are corroded. Check the condition of the battery and terminal connections (see page 316). You can then try jump starting the vehicle from a booster battery (see page 327).
The Starter Operates Normally
In this case, the starter motor’s speed sounds normal, or even faster than normal, when you turn the ignition switch to the START (III) position, but the engine does not run.

- Are you using a properly coded key? An improperly coded key will cause the immobilizer system indicator in the instrument panel to blink rapidly (see page 127).

- Are you using the proper starting procedure? Refer to Starting the Engine on page 243.

- Do you have fuel? Check the fuel gauge; the low fuel indicator may not be working.

- There may be an electrical problem, such as no power to the fuel pump. Check all the fuses (see page 336).

If you find nothing wrong, you will need a qualified technician to find the problem. See Emergency Towing on page 341.
Although this seems like a simple procedure, you should take several precautions. Open the hood, and check the physical condition of the battery. In very cold weather, check the condition of the electrolyte. If it seems slushy or frozen, do not try jump starting until it thaws.

To jump start your vehicle:

1. Open the hood, and check the physical condition of the battery. In very cold weather, check the condition of the electrolyte. If it seems slushy or frozen, do not try jump starting until it thaws.

   **WARNING**

   A battery can explode if you do not follow the correct procedure, seriously injuring anyone nearby.

   Keep all sparks, open flames, and smoking materials away from the battery.

   You cannot start your vehicle with an automatic transmission by pushing or pulling it.

   **NOTICE**

   *If a battery sits in extreme cold, the electrolyte inside can freeze. Attempting to jump start with a frozen battery can cause it to rupture.*

2. Turn off all the electrical accessories: climate control, audio system, lights, etc. Put the transmission in neutral (manual) or Park (automatic), and set the parking brake.

3. Connect one jumper cable to the positive (+) terminal on your battery. Connect the other end to the positive (+) terminal on the booster battery.

The numbers in the illustration show the order to connect the jumper cable.

CONTINUED
Jump Starting

4. Connect the second jumper cable to the negative (−) terminal on the booster battery. Connect the other end to the grounding point as shown. Do not connect this jumper cable to any other part of the engine.

5. If the booster battery is in another vehicle, have an assistant start that vehicle and run it at a fast idle.

6. Start the vehicle. If the starter motor still operates slowly, check that the jumper cables have good metal-to-metal contact.

7. Once your vehicle is running, disconnect the negative cable from your vehicle, then from the booster battery. Disconnect the positive cable from your vehicle, then from the booster battery.

Keep the ends of the jumper cables away from each other and any metal on the vehicle until everything is disconnected. Otherwise, you may cause an electrical short.
If the Engine Overheats

The reading of the vehicle’s temperature gauge should stay in the midrange. If it climbs to the red mark, you should determine the reason (hot day, driving up a steep hill, etc.).

If your vehicle overheats, you should take immediate action. The only indication may be the temperature gauge climbing to or above the red mark. Or you may see steam or spray coming from under the hood.

**WARNING**

Steam and spray from an overheated engine can seriously scald you.

Do not open the hood if steam is coming out.

1. Safely pull to the side of the road. Put the transmission in neutral (manual) or Park (automatic), and set the parking brake. Turn off all accessories, and turn on the hazard warning indicators.

2. If you see steam and/or spray coming from under the hood, turn off the engine. Wait until you see no more signs of steam or spray, then open the hood.

3. If you do not see steam or spray, leave the engine running and watch the temperature gauge. If the high heat is due to overloading, the engine should start to cool down almost immediately. If it does, wait until the temperature gauge comes down to the midpoint, then continue driving.

4. If the temperature gauge stays at the red mark, turn off the engine.

5. Look for any obvious coolant leaks, such as a split radiator hose. Everything is still extremely hot, so use caution. If you find a leak, it must be repaired before you continue driving (see *Emergency Towing* on page 341).

**NOTICE**

*Driving with the temperature gauge pointer at the red mark can cause serious damage to the engine.*
If the Engine Overheats

6. If you do not find an obvious leak, check the coolant level in the radiator reserve tank. Add coolant if the level is below the MIN mark.

7. If there was no coolant in the reserve tank, you may need to add coolant to the radiator. Let the engine cool down until the pointer reaches the middle of the temperature gauge or lower before checking the radiator.

**WARNING**

Removing the radiator cap while the engine is hot can cause the coolant to spray out, seriously scalding you.

Always let the engine and radiator cool down before removing the radiator cap.

8. Using gloves or a large heavy cloth, turn the radiator cap counterclockwise, without pushing down, to the first stop. After the pressure releases, push down on the cap, and turn it until it comes off.

9. Start the engine, and set the temperature to maximum heat (climate control to AUTO at “”). Add coolant to the radiator up to the base of the filler neck. If you do not have the proper coolant mixture available, you can add plain water. Remember to have the cooling system drained and refilled with the proper mixture as soon as you can.

10. Put the radiator cap back on tightly. Run the engine, and check the temperature gauge. If it goes back to the red mark, the engine needs repair (see Emergency Towing on page 341).

11. If the temperature stays normal, check the coolant level in the radiator reserve tank. If it has gone down, add coolant to the MAX mark. Put the cap back on tightly.

330
Low Oil Pressure Indicator

This indicator should never come on when the engine is running. If it starts flashing or stays on, or if you see a “CHECK ENGINE OIL LEVEL” message on the multi-information display, the oil pressure has dropped very low or lost pressure. Serious engine damage is possible, and you should take immediate action.

**NOTICE**

Running the engine with low oil pressure can cause serious mechanical damage almost immediately. Turn off the engine as soon as you can safely get the vehicle stopped.

1. Safely pull off the road, and shut off the engine. Turn on the hazard warning indicators.

2. Let the vehicle sit for a minute. Open the hood, and check the oil level (see page 234). An engine very low on oil can lose pressure during cornering and other driving maneuvers.

3. If necessary, add oil to bring the level back to the full mark on the dipstick (see page 287).

4. Start the engine and watch the oil pressure indicator. If it does not go out within 10 seconds, turn off the engine. There is a mechanical problem that needs to be repaired before you can continue driving (see Emergency Towing on page 341).
If the charging system indicator comes on brightly when the engine is running, or if you see a “CHECK CHARGING SYSTEM” message on the multi-information display, the battery is not being charged. Immediately turn off all electrical accessories. Try not to use other electrically operated controls such as the power windows. Keep the engine running; starting the engine will discharge the battery rapidly. Go to a service station or garage where you can get technical assistance.

If this indicator comes on while driving, or if you see a “CHECK EMISSION SYSTEM” message on the multi-information display, it means one of the engine’s emissions control systems may have a problem. Even though you may feel no difference in your vehicle’s performance, it can reduce your fuel economy and cause increased emissions. Continued operation may cause serious damage.

If you have recently refueled your vehicle, the indicator could come on due to a loose or missing fuel fill cap. You will also see a “TIGHTEN FUEL CAP” message on the information display. Tighten the cap until it clicks at least once. Tightening the cap will not turn the indicator off immediately; it can take several days of normal driving.

If the indicator comes on repeatedly, even though it may turn off as you continue driving, have your vehicle checked by your dealer as soon as possible.
Your vehicle has certain “readiness codes” that are part of the on-board diagnostics for the emissions systems. In some states, part of the emissions testing is to make sure these codes are set. If they are not set, the test cannot be completed.

To check if they are set, turn the ignition switch to the ON (II) position, without starting the engine. The malfunction indicator lamp will come on for 20 seconds. If it then goes off, the readiness codes are set. If it blinks five times, the readiness codes are not set. If possible, do not take your vehicle for a state emissions test until the readiness codes are set. Refer to State Emissions Testing for more information (see page 357).

If your vehicle has an automatic transmission, the malfunction indicator lamp may also come on with the “D” indicator.

You will also see a “CHECK EMISSION SYSTEM” message on the multi-information display (see page 84).

**NOTICE**

If you keep driving with the malfunction indicator lamp on, you can damage your vehicle’s emissions controls and engine. Those repairs may not be covered by your vehicle’s warranties.

Readiness Codes
Your vehicle has certain “readiness codes” that are part of the on-board diagnostics for the emissions systems. In some states, part of the emissions testing is to make sure these codes are set. If they are not set, the test cannot be completed.

If the battery in your vehicle has been disconnected or gone dead, these codes may be erased. It takes several days of driving under various conditions to set the codes again.
However, if the brake pedal does not feel normal, you should take immediate action. A problem in one part of the system’s dual circuit design will still give you braking at two wheels. You will feel the brake pedal go down much farther before the vehicle begins to slow down, and you will have to press harder on the pedal. If you must drive the vehicle a short distance in this condition, drive slowly and carefully. Slow down by shifting to a lower gear, and pull to the side of the road when it is safe. Because of the long distance needed to stop, it is hazardous to drive the vehicle. You should have it towed and repaired as soon as possible (see Emergency Towing on page 341).

If the brake system indicator comes on while driving, the brake fluid level is probably low. You will see a “BRAKE FLUID LOW” message on the multi-information display. Press lightly on the brake pedal to see if it feels normal. If it does, check the brake fluid level the next time you stop at a service station (see page 288).

If the fluid level is low, take your vehicle to a dealer, and have the brake system inspected for leaks or worn brake pads.

If the brake system indicator comes on when you turn the ignition switch to the ON (II) position, and as a reminder to check the parking brake. It will stay on if you do not fully release the parking brake.

If the brake system indicator comes on, the brake fluid level is probably low. You will see a “BRAKE FLUID LOW” message on the multi-information display. Press lightly on the brake pedal to see if it feels normal. If it does, check the brake fluid level the next time you stop at a service station (see page 288).

If the fluid level is low, take your vehicle to a dealer, and have the brake system inspected for leaks or worn brake pads.

The brake system indicator normally comes on when you turn the ignition switch to the ON (II) position, and as a reminder to check the parking brake. It will stay on if you do not fully release the parking brake.

If the brake system indicator comes on, the brake fluid level is probably low. You will see a “BRAKE FLUID LOW” message on the multi-information display. Press lightly on the brake pedal to see if it feels normal. If it does, check the brake fluid level the next time you stop at a service station (see page 288).

If the fluid level is low, take your vehicle to a dealer, and have the brake system inspected for leaks or worn brake pads.

However, if the brake pedal does not feel normal, you should take immediate action. A problem in one part of the system’s dual circuit design will still give you braking at two wheels. You will feel the brake pedal go down much farther before the vehicle begins to slow down, and you will have to press harder on the pedal.

You will also see a “CHECK BRAKE SYSTEM” message on the multi-information display when this indicator comes on.

If the ABS indicator and the VSA system indicator come on with the brake system indicator, have your vehicle inspected by your dealer immediately.
If the electric motor will not close the moonroof, do the following:

1. Check the fuse for the moonroof motor (see page 340). If the fuse is blown, replace it with one of the same or lower rating.

2. Try closing the moonroof. If the new fuse blows immediately or the moonroof motor still does not operate, you can close the moonroof manually.

3. Get the moonroof wrench out of the tool kit in the trunk.

4. Use a screwdriver or coin to remove the round plug in the center of the headliner.

5. Insert the moonroof wrench into the socket behind this plug. Turn the wrench until the moonroof is fully closed.

6. Remove the wrench. Reinstall the round plug.

If you need to close the moonroof manually, it means the moonroof opening/closing function is developing a problem. Have your vehicle checked by your dealer.
The interior fuse box is on the driver’s lower left side. To remove the fuse box lid, pull it toward you and take it out of its hinges.

The under-hood fuse box is located near the back of the engine compartment on the driver’s side. To open it, push the tabs as shown.

Checking and Replacing Fuses
If something electrical in your vehicle stops working, the first thing you should check for is a blown fuse. Determine from the chart on pages 339 and 340, or the diagram on the fuse box lid, which fuse or fuses control that device. Check those fuses first, but check all the fuses before deciding that a blown fuse is the cause. Replace any blown fuses, and check if the device works.

1. Turn the ignition switch to the LOCK (0) position. Make sure the headlights and all other accessories are off.

2. Remove the cover from the fuse box.
Check each of the large fuses in the under-hood fuse box by looking through the side window at the wire inside. Remove the screws with a Phillips-head screwdriver.

Check the smaller fuses in the under-hood fuse box and all the fuses in the interior fuse box by pulling out each one with the fuse puller provided in the under-hood fuse box.

Look for a blown wire inside the fuse. If it is blown, replace the fuse with one of the spare fuses of the same rating or lower.
If you cannot drive the vehicle without fixing the problem, and you do not have a spare fuse, take a fuse of the same rating or a lower rating from one of the other circuits with the fuse puller provided in the underhood fuse box. Make sure you can do without that circuit temporarily (such as the accessory power socket or radio).

If you replace the blown fuse with a spare fuse that has a lower rating, it might blow out again. This does not indicate anything wrong. Replace the fuse with one of the correct rating as soon as you can.

**NOTICE**

*Replacing a fuse with one that has a higher rating greatly increases the chances of damaging the electrical system. If you do not have a replacement fuse with the proper rating for the circuit, install one with a lower rating.*

6. If the replacement fuse of the same rating blows in a short time, there is probably a serious electrical problem with your vehicle. Leave the blown fuse in that circuit, and have your vehicle checked by a qualified technician.

If the driver’s power window fuse is removed, the AUTO function of the driver’s window may be disabled. You should reset the AUTO feature, (see page 148).

If the radio fuse is removed, the audio system will disable itself. The next time you turn on the radio you will see “CODE” in the frequency display. Use the preset buttons to enter the five-digit code (see page 201).

* : On Canadian models
If your vehicle needs to be towed, call a professional towing service or organization. Never tow your vehicle with just a rope or chain. It is very dangerous.

There are two ways to tow your vehicle:

Flat-bed Equipment — The operator loads your vehicle on the back of a truck. This is the best way to transport your vehicle.

Wheel-lift Equipment — The tow truck uses two pivoting arms that go under the tires (front) and lift them off the ground. The other two tires remain on the ground. This is an acceptable way to tow your vehicle.

If, due to damage, your vehicle must be towed with the front wheels on the ground, do this:

Manual transmission:
- Release the parking brake.
- Shift the transmission to neutral.
- Leave the ignition switch in the ACCESSORY (I) position so the steering wheel does not lock.

Automatic transmission:
- Release the parking brake.
- Start the engine.
- Shift to D, then to N.
- Turn off the engine.
- Leave the ignition switch in the ACCESSORY (I) position so the steering wheel does not lock.

Improper towing preparation will damage the transmission. Follow the above procedure exactly. If you cannot shift the transmission or start the engine (automatic transmission), your vehicle must be transported with the front wheels off the ground.

With the front wheels on the ground, it is best to tow the vehicle no farther than 50 miles (80 km), and keep the speed below 35 mph (55 km/h).
Emergency Towing

**NOTICE**

*Trying to lift or tow your vehicle by the bumpers will cause serious damage. The bumpers are not designed to support the vehicle’s weight.*

**NOTICE**

*The steering system can be damaged if the steering wheel is locked. Leave the ignition switch in the ACCESSORY (I) position, and make sure the steering wheel turns freely before you begin towing.*
The diagrams in this section give you the dimensions and capacities of your vehicle and the locations of the identification numbers. It also includes information you should know about your vehicle’s tires and emissions control systems.

Your vehicle has several identifying numbers in various places.

The vehicle identification number (VIN) is the 17-digit number your dealer uses to register your vehicle for warranty purposes. It is also necessary for licensing and insuring your vehicle. The easiest place to find the VIN is on a plate fastened to the top of the dashboard. You can see it by looking through the windshield on the driver's side. It is also on the certification label attached to the driver's doorjamb, and is stamped on the engine compartment bulkhead. The VIN is also provided in bar code on the certification label.
The engine number is stamped into the front of the engine block.

The transmission number is on a label on top of the transmission.

</tbody>
</table>
The tires on your vehicle meet all U.S. Federal Safety Requirements. All tires are also graded for treadwear, traction, and temperature performance according to Department of Transportation (DOT) standards. The following explains these gradings.

**Uniform Tire Quality Grading**
Quality grades can be found where applicable on the tire sidewall between the tread shoulder and the maximum section width. For example:

- **Treadwear 200**
- **Traction AA**
- **Temperature A**

All passenger car tires must conform to Federal Safety Requirements in addition to these grades.

**Treadwear**
The treadwear grade is a comparative rating based on the wear rate of the tire when tested under controlled conditions on a specified government test course. For example, a tire graded 150 would wear one and one-half (1 1/2) times as well on the government course as a tire graded 100. The relative performance of tires depends upon the actual conditions of their use, however, and may depart significantly from the norm due to variations in driving habits, service practices, and differences in road characteristics and climate.

**Traction — AA, A, B, C**
The traction grades, from highest to lowest, are AA, A, B, and C. Those grades represent the tire’s ability to stop on wet pavement as measured under controlled conditions on specified government test surfaces of asphalt and concrete. A tire marked C may have poor traction performance.

Warning: The traction grade assigned to this tire is based on straight-ahead braking traction tests, and does not include acceleration, cornering, hydroplaning, or peak traction characteristics.
Temperature – A, B, C

The temperature grades are A (the highest), B, and C, representing the tire’s resistance to the generation of heat and its ability to dissipate heat when tested under controlled conditions on a specified indoor laboratory test wheel. Sustained high temperature can cause the material of the tire to degenerate and reduce tire life, and excessive temperature can lead to sudden tire failure. The grade C corresponds to a level of performance which all passenger car tires must meet under the Federal Motor Vehicle Safety Standard No. 109. Grades B and A represent higher levels of performance on the laboratory test wheel than the minimum required by law.

Warning: The temperature grade for this tire is established for a tire that is properly inflated and not overloaded. Excessive speed, underinflation, or excessive loading, either separately or in combination, can cause heat buildup and possible tire failure.
The tires that came on your vehicle have a number of markings. Those you should be aware of are described below.

**Tire Size**
Whenever tires are replaced, they should be replaced with tires of the same size. Following is an example of tire size with an explanation of what each component means.

P215/50R17 93V

- **P** — Vehicle type (P indicates passenger vehicle).
- 225 — Tire width in millimeters.
- 55 — Aspect ratio (the tire’s section height as a percentage of its width).
- **R** — Tire construction code (R indicates radial).

16 — Rim diameter in inches.
94 — Load index (a numerical code associated with the maximum load the tire can carry).
V — Speed symbol (an alphabetical code indicating the maximum speed rating).

**Tire Identification Number**
The tire identification number (TIN) is a group of numbers and letters that look like the following example TIN. TIN is located on the sidewall of the tire.

DOT B97R FW6X 2202

- **DOT** — This indicates that the tire meets all requirements of the U.S. Department of Transportation.
- B97R — Manufacturer’s identification mark.
- FW6X — Tire type code.
- 2202 — Date of manufacture.

**Maximum Tire Pressure**
Max Press — The maximum air pressure the tire can hold.

**Maximum Tire Load**
Max Load — The maximum load the tire can carry at maximum air pressure.
Each tire, including the spare (if provided), should be checked monthly when cold and inflated to the inflation pressure recommended by the vehicle manufacturer on the vehicle placard or tire inflation pressure label.

(If your vehicle has tires of a different size than the size indicated on the vehicle placard or tire inflation pressure label, you should determine the proper tire inflation pressure for those tires.)

As an added safety feature, your vehicle has been equipped with a tire pressure monitoring system (TPMS) that illuminates a low tire pressure telltale when one or more of your tires is significantly under-inflated.

Accordingly, when the low tire pressure telltale illuminates, you should stop and check your tires as soon as possible, and inflate them to the proper pressure.

Driving on a significantly under-inflated tire causes the tire to overheat and can lead to tire failure. Under-inflation also reduces fuel efficiency and tire tread life, and may affect the vehicle’s handling and stopping ability.

Please note that the TPMS is not a substitute for proper tire maintenance, and it is the driver’s responsibility to maintain correct tire pressure, even if under-inflation has not reached the level to trigger illumination of the TPMS low tire pressure telltale.
Always check the TPMS malfunction telltale after replacing one or more tires or wheels on your vehicle to ensure that the replacement or alternate tires and wheels allow the TPMS to continue to function properly.

Your vehicle has also been equipped with a TPMS malfunction indicator to indicate when the system is not operating properly. The TPMS malfunction indicator is provided by a separate telltale, which displays the symbol “TPMS” when illuminated.

When the malfunction indicator is illuminated, the system may not be able to detect or signal low tire pressure as intended.

TPMS malfunctions may occur for a variety of reasons, including the installation of replacement or alternate tires or wheels on the vehicle that prevent the TPMS from functioning properly.
The burning of gasoline in your vehicle’s engine produces several by-products. Some of these are carbon monoxide (CO), oxides of nitrogen (NOx), and hydrocarbons (HC). Gasoline evaporating from the tank also produces hydrocarbons. Controlling the production of NOx, CO, and HC is important to the environment. Under certain conditions of sunlight and climate, NOx and HC react to form photochemical “smog.” Carbon monoxide does not contribute to smog creation, but it is a poisonous gas.

**Emissions Controls**

**The Clean Air Act**
The United States Clean Air Act* sets standards for automobile emissions. It also requires that automobile manufacturers explain to owners how their emissions controls work and what to do to maintain them. This section summarizes how the emissions controls work.

* In Canada, Acura vehicles comply with the Canadian emission requirements, as specified in an agreement with Environment Canada, at the time they are manufactured.

**Crankcase Emissions Control System**
Your vehicle has a positive crankcase ventilation system. This keeps gasses that build up in the engine’s crankcase from going into the atmosphere. The positive crankcase ventilation valve routes them from the crankcase back to the intake manifold. They are then drawn into the engine and burned.

**Evaporative Emissions Control System**
As gasoline evaporates in the fuel tank, an evaporative emissions control canister filled with charcoal adsorbs the vapor. It is stored in this canister while the engine is off. After the engine is started and warmed up, the vapor is drawn into the engine and burned during driving.

**Onboard Refueling Vapor Recovery**
The onboard refueling vapor recovery (ORVR) system captures the fuel vapors during refueling. The vapors are adsorbed in a canister filled with activated carbon. While driving, the fuel vapors are drawn into the engine and burned off.
Exhaust Emissions Controls
The exhaust emissions controls include three systems: PGM-FI, ignition timing control, and three way catalytic converter. These three systems work together to control the engine’s combustion and minimize the amount of HC, CO, and NOx that comes out the tailpipe. The exhaust emissions control systems are separate from the crankcase and evaporative emissions control systems.

PGM-FI System
The PGM-FI system uses sequential multiport fuel injection. It has three subsystems: air intake, engine control, and fuel control. The powertrain control module (PCM) in automatic transmission vehicles or the engine control module (ECM) in manual transmission vehicles uses various sensors to determine how much air is going into the engine. It then controls how much fuel to inject under all operating conditions.

Ignition Timing Control System
This system constantly adjusts the ignition timing, reducing the amount of HC, CO, and NOx produced.

Three Way Catalytic Converter
The three way catalytic converter is in the exhaust system. Through chemical reactions, it converts HC, CO, and NOx in the engine’s exhaust to carbon dioxide (CO₂), nitrogen (N₂), and water vapor.

Replacement Parts
The emissions control systems are designed and certified to work together in reducing emissions to levels that comply with the Clean Air Act. To make sure the emissions remain low, you should use only new Acura replacement parts or their equivalent for repairs. Using lower quality parts may increase the emissions from your vehicle.

The emissions control systems are covered by warranties separate from the rest of your vehicle. Read your warranty manual for more information.
Always use unleaded gasoline. Even a small amount of leaded gasoline can contaminate the catalyst metals, making the three way catalytic converter ineffective.

The three way catalytic converter contains precious metals that serve as catalysts, promoting chemical reactions to convert the exhaust gasses without affecting the metals. The catalytic converter is referred to as a three-way catalyst, since it acts on HC, CO, and NOx. A replacement unit must be an original Acura part or its equivalent.

The three way catalytic converter must operate at a high temperature for the chemical reactions to take place. It can set on fire any combustible materials that come near it. Park your vehicle away from high grass, dry leaves, or other flammables.

Keep the engine well maintained.

Have your vehicle diagnosed and repaired if it is misfiring, backfiring, stalling, or otherwise not running properly.

A defective three way catalytic converter contributes to air pollution, and can impair your engine’s performance. Follow these guidelines to protect your vehicle’s three way catalytic converter.

- Always use unleaded gasoline. Even a small amount of leaded gasoline can contaminate the catalyst metals, making the three way catalytic converter ineffective.
Testing of Readiness Codes
If you take your vehicle for a state emissions test shortly after the battery has been disconnected or gone dead, it may not pass the test. This is because of certain “readiness codes” that must be set in the on-board diagnostics for the emissions systems. These codes are erased when the battery is disconnected, and set again only after several days of driving under a variety of conditions.

If the testing facility determines that the readiness codes are not set, you will be requested to return at a later date to complete the test. If you must get the vehicle retested within the next two or three days, you can condition the vehicle for retesting by doing the following.

- Make sure the gas tank is nearly, but not completely, full (around 3/4).
- Make sure the vehicle has been parked with the engine off for 6 hours or more.
- Make sure the ambient temperature is between 40° and 95°F.
- Without touching the accelerator pedal, start the engine, and let it idle for 20 seconds.
- Keep the vehicle in Park (automatic) or neutral (manual). Increase the engine speed to 2,000 rpm, and hold it there until the temperature gauge rises to at least 1/4 of the scale (about 3 minutes).

CONTINUED
Select a nearby lightly traveled major highway where you can maintain a speed of 50 to 60 mph (80 to 97 km/h) for at least 20 minutes. Drive on the highway in D (automatic) or 6th (manual). Do not use the cruise control. When traffic allows, drive for 90 seconds without moving the accelerator pedal. (Vehicle speed may vary slightly; this is okay.) If you cannot do this for a continuous 90 seconds because of traffic conditions, drive for at least 30 seconds, then repeat it two more times (for a total of 90 seconds).

Then drive in city/suburban traffic for at least 10 minutes. When traffic conditions allow, let the vehicle coast for several seconds without using the accelerator pedal or the brake pedal.

Stop the vehicle, turn off the ignition switch, and leave it off for 30 minutes.

If the testing facility determines the readiness codes are still not set, see your dealer.

Acura dealership personnel are trained professionals. They should be able to answer all your questions. If you encounter a problem that your dealership does not solve to your satisfaction, please discuss it with the dealership’s management. The service manager or general manager can help. Almost all problems are solved in this way.

If you are dissatisfied with the decision made by the dealership’s management, contact the Acura Client Services Office.

When you call or write, please give us this information:

- Vehicle Identification Number (see page 344)
- Name and address of the dealer who services your vehicle
- Date of purchase
- Mileage on your vehicle
- Your name, address, and telephone number
- A detailed description of the problem
- Name of the dealer who sold the vehicle to you
U.S. Owners
Your new vehicle is covered by these warranties:

**New Vehicle Limited Warranty** — covers your new vehicle, except for the battery, emissions control systems, and accessories, against defects in materials and workmanship.

**Emissions Control Systems Defects Warranty and Emissions Performance Warranty** — these two warranties cover your vehicle’s emissions control systems. Time, mileage, and coverage are conditional. Please read your warranty booklet for exact information.

**Original Equipment Battery Limited Warranty** — this warranty gives up to 100% credit toward a replacement battery.

**Seat Belt Limited Warranty** — a seat belt that fails to function properly is covered by a limited warranty. Please read your warranty booklet for details.

**Rust Perforation Limited Warranty** — all exterior body panels are covered for rust-through from the inside for the specified time period with no mileage limit.

**Accessory Limited Warranty** — Acura accessories are covered under this warranty. Time and mileage limits depend on the type of accessory and other factors. Please read your warranty manual for details.

**Replacement Parts Limited Warranty** — covers all Acura replacement parts against defects in materials and workmanship.

**Replacement Battery Limited Warranty** — provides prorated coverage for a replacement battery purchased from your dealer.

**Replacement Muffler Lifetime Limited Warranty** — provides coverage for as long as the purchaser of the muffler owns the vehicle.

Restrictions and exclusions apply to all these warranties. Please read the 2007 Acura warranty information booklet that came with your vehicle for precise information on warranty coverages. Your vehicle’s original tires are covered by their manufacturer. Tire warranty information is in a separate booklet.

**Canadian Owners**
Please refer to the 2007 warranty manual that came with your vehicle.
If you believe that your vehicle has a defect which could cause a crash or could cause injury or death, you should immediately inform the National Highway Traffic Safety Administration (NHTSA), in addition to notifying American Honda Motor Co., Inc.

If NHTSA receives similar complaints, it may open an investigation, and if it finds that a safety defect exists in a group of vehicles, it may order a recall and remedy campaign. However, NHTSA cannot become involved in individual problems between you, your dealer, or American Honda Motor Co., Inc.

To contact NHTSA, you may call the Vehicle Safety Hotline toll-free at 1-888-327-4236 (TTY: 1-800-424-9153); go to http://www.safercar.gov; or write to: Administrator, NHTSA, 400 Seventh Street, SW., Washington, DC 20590. You can also obtain other information about motor vehicle safety from http://www.safercar.gov.

http://www.safercar.gov
The publications shown below can be purchased from Helm Incorporated. You can order in any of three ways:
- Detach and mail the order form on the right half of this page
- Call Helm Inc. at 1-800-782-4356 (credit card orders only)
- Go online at www.helminc.com

If you are interested in other years or models, contact Helm Inc. at 1-800-782-4356.

Purchasing Factory Authorized Manuals (U.S. only)

Orders are mailed within 10 days. Please allow adequate time for delivery.
This manual covers maintenance and recommended procedures for repair to engine and chassis components. It is written for the journeyman mechanic, but is simple enough for most mechanically-inclined owners to understand.

**Service Manual:**
This manual complements the service manual by providing in-depth troubleshooting information for each electrical circuit in your vehicle.

**Electrical Troubleshooting Manual:**
This manual complements the service manual by providing in-depth troubleshooting information for each electrical circuit in your vehicle.

**Body Repair Manual:**
This manual describes the procedures involved in the replacement of damaged body parts.

Unleaded Gasoline ................................. 230
Upholstery Cleaning ............................... 306
Service Information Summary

**Gasoline:**
Premium unleaded gasoline, pump octane number of 91 or higher.

**Fuel Tank Capacity:**
17.1 US gal (64.7 l)

**Recommended Engine Oil:**
API Premium grade 5W-30 detergent oil (see page 285).

Oil change capacity (including filter):
4.4 US qt (4.2 l)

**Automatic Transmission Fluid:**
Honda ATF-Z1 (Automatic Transmission Fluid) preferred, or a DEXRON® III ATF as a temporary replacement (see page 292).

**6-speed Manual Transmission Fluid:**
Honda Manual Transmission Fluid preferred, or an SAE 10W-30 or 10W-40 motor oil as a temporary replacement (see page 293).
Capacity:
2.1 US qt (2.0 l)

**Power Steering Fluid:**
Honda Power Steering Fluid preferred, or another brand of power steering fluid as a temporary replacement. Do not use ATF (see page 295).

**Brake Fluid:**
Honda Heavy Duty Brake Fluid DOT 3 preferred, or a DOT 3 or DOT 4 brake fluid as a temporary replacement (see page 294).

**Tire Pressure (measured cold):**
- Front: 32 psi (220 kPa, 2.2 kgf/cm²)
- Rear: 30 psi (210 kPa, 2.1 kgf/cm²)
- Compact Spare Tire: 60 psi (420 kPa, 4.2 kgf/cm²)
