## **Replacement Key** **(US: EX, Canada: EX-R)**

If you lose your remote access key, you can order a replacement from your Honda dealer. You need the five-digit code number on the aluminum plate that came with your key and the four-digit number on the key blade. Both numbers are equally important and should be stored in a safe yet accessible place.

Take care in handling the remote access key; its electric circuit is very sensitive.

- Avoid dropping heavy objects on the key.
- Keep the key away from areas with high temperatures, high humidity and direct sunlight.
- Do not disassemble the key.
- Use only a mild detergent and water to clean the key; dry the key thoroughly with a soft cloth.

The remote access key will not operate if:

- Dirt or moisture is on the key or keyless entry window.
- The key's battery is not fully charged.

Consult your dealer if the keyless entry does not operate properly.

# Keys and Locks (cont'd)

---

## Door Plunger

From inside the car, each door and the tailgate can be locked by pushing the plunger down; each door can be unlocked by pulling the plunger up.

Pushing down the plunger on the driver's door locks all doors and the tailgate, but pulling up the plunger unlocks only the driver's door.

Pushing down on the tailgate plunger locks the tailgate and all doors. The plunger on the tailgate is not designed to be pulled up manually for unlocking.

## Power Door Locks

All doors and the tailgate can be simultaneously locked and unlocked by operating the master door lock switch on the inside of each front door.

---

## Lockout Prevention

Lockout Prevention keeps you from locking the driver's door or the tailgate when the key is in the ignition and the driver's door or tailgate is open. If you try to lock the driver's door by pushing down the plunger, the tailgate plunger and all other door plungers will pop back up. If you push down the tailgate plunger when the key is in the ignition and the tailgate is open, the tailgate plunger and all other door plungers will pop back up. Also, both master door lock switches will not lock the doors if either front door is open and the key is in the ignition.

The system can be overridden if the outside or inside door handle is held in the open position while the plunger is pushed down. The lock cycles several times and may lock all doors and the tailgate after the door is closed .

Lockout Prevention does not affect the operation of any passenger door lock.

### (US Cars: EX, Canada Cars: EX-R)

Lockout Prevention does not affect the operation of the Remote Access Key.

## Child Proof Door Locks

The child proof door locks are designed to prevent accidental opening of the rear doors from inside the car. To activate the locks, push down the lock tabs located on each rear door, then close the doors. When the rear doors are locked in this way, they can only be opened from the outside.

# Seats

---

## Front Seat

Adjust the seat position by pulling up on the adjustment lever under the front edge of the seat cushion, and sliding the seat to the desired position. Then release the lever and make sure the seat is locked in position by moving it back and forth.

The angle of the seat-back can be changed by pulling up on the lever at the outside edge of the seat and leaning forward or back. Release the lever and let the seat lock into place when it reaches the desired angle.

Seat belts are most effective when the driver and passengers are sitting up straight and well back in each seat.

### **⚠ WARNING**

- Do not adjust the driver's seat while the car is moving; the seat could move suddenly, causing loss of vehicle control.
- To reduce the risk of sliding under the seat belts in a collision, the seat-backs should be upright and you should sit well back in the seat.

## Driver's Lumbar Support (US: EX, CANADA: EX-R)

To adjust for more or less support of the driver's lower seat-back cushion, turn the knob on the inner side of the seat-back.

**⚠ WARNING** Do not try to adjust the lumbar support while driving. Make the adjustment while sitting in your normal driving position before driving away.

---

## Head Restraints

The head restraints are designed to help reduce injuries due to whiplash. They are located at the top of each front seat-back and have several height positions. The restraints can be adjusted by pulling up to the recommended position. To lower them, slide the button next to the restraint's height adjustment bar while pushing the restraint down. Adjust so the top of the restraint is approximately level with the tops of your ears.

If a head restraint must be removed (for cleaning, fabric repair, etc.) pull the restraint up to its highest position, then slide the button next to the restraint out while pulling the restraint out.

To reinstall, reverse the above procedure.

### **⚠ WARNING**

- Do not drive the car with head restraints removed.
- Do not try to adjust head restraints while driving.

## Rear Seat Arm Rest

The rear seat arm rest located at the rear seat-back can be used by pulling the tab.

## Seats (cont'd)

---

### Folding Rear Seat

Each rear seat-back can be folded down to provide more cargo space. Folding both rear seat-backs down will provide maximum cargo space.

1. Pull on the strap at the center of the seat to lift up the seat cushion.

2. Remove the head restraint from the rear seat-back by sliding the button next to the head restraint's height adjustment bar and lifting the head restraint out.
