Seat Adjustments

Driver's Seat Adjustments
3.0CL with 8-way power seat

Adjust the seat before you start driving.

The long horizontal switch adjusts the seat bottom in several directions. The short vertical switch adjusts the seat-back angle.

Push the horizontal switch forward or backward to adjust the distance to the steering wheel and pedals.

Pull up or push down on the front of the switch to move the seat bottom's front edge up or down.

Pull up or push down on the rear of the switch to move the rear of the seat bottom up or down.

Pull the center of the horizontal switch up to raise the seat. Push it down to lower the seat.
Adjust the seat-back angle by pushing the rear switch in the direction you want to move.

**WARNING**

Reclining the seat-back can decrease the protection you get from your seat belt in a crash.

You can slide under the seat belt and be seriously injured.

Adjust the seat-back to an upright position, and sit well back in the seat.

---

**Lumbar Support**

Vary the lumbar support by moving the lever on the right side of the seat-back. Pivot the lever forward until it stops, then let it return. Doing this several times adjusts the lumbar support through its full range.

Driver's Seat Adjustments
2.2CL with 6-way power seat

Adjust the seat before you start driving.

The long horizontal switch adjusts the seat bottom in several directions. Push the switch forward or backward to adjust the distance to the steering wheel and pedals.

Pull up or push down on the front of the switch to move the seat bottom's front edge up or down. Pull up or push down on the rear of the switch to move the rear of the seat bottom up or down.

Pull the center of the horizontal switch up to raise the seat. Push it down to lower the seat.
To change the angle of the seat-back, pull up on the lever on the outside of the seat bottom. Move the seat-back to the desired position and release the lever. Let the seat-back latch in the new position.

**WARNING**

Reclining the seat-back can decrease the protection you get from your seat belt in a crash.

You can slide under the seat belt and be seriously injured.

Adjust the seat-back to an upright position, and sit well back in the seat.

**Passenger's Seat Adjustments**

*All models*

To adjust the seat forward and backward, pull up on the lever under the seat cushion’s front edge. Move the seat to the desired position, and release the lever. Try to move the seat to make sure it is locked in position.

To change the angle of the seat-back, pull up on the lever on the outside of the seat bottom. Move the seat-back to the desired position, and release the lever. Let the seat-back latch in the new position.

**WARNING**

Reclining the seat-back can decrease the protection you get from your seat belt in a crash.

You can slide under the seat belt and be seriously injured.

Adjust the seat-back to an upright position, and sit well back in the seat.
Rear Seat Access

3.0CL with 8-way power driver's seat
To get into the rear seat on the driver's side, pull up on the lever on the side of the seat-back.

The seat-back will tilt forward and, if the driver's door is open, the seat bottom will automatically move forward several inches.

When you tilt the seat-back backward, the seat bottom will automatically return to its original position.

If the seat runs into any obstacles as it is automatically moving back to its original position, it stops, then moves forward a short distance. Remove the obstacle, such as a package on the floor between the seats, then use the horizontal switch to move the seat to the desired position.

Sitting down heavily in the seat as it is moving backward can also cause the seat to react as if it has run into an obstacle.

2.2CL with 6-way power driver's seat
To get into the rear seat on the driver's side, pull up on the release lever on the side of the seat-back.

Passenger's side, all models
To get into the rear seat on the passenger's side, pull up on the release lever on the side of the seat-back, then pull the seat-back forward. The whole seat will move forward to allow easier entry to the back seat. After you return the seat-back to the upright position, push the whole seat backward until it latches. Make sure the seat is fully latched before sitting in it.
Head Restraints

The front head restraints help protect you and your passenger from whiplash and other injuries. They are most effective when you adjust them so the top of the restraint is even with the top of your ears.

The front head restraints adjust for height. You need both hands to adjust the restraint. Do not attempt to adjust it while driving. To raise it, pull upward. To lower the restraint, push the release button sideways and push the restraint down.

To remove a head restraint for cleaning or repair, pull it up as far as it will go. Press the release button and pull the restraint out of the seat-back.

⚠️ WARNING ⚠️

Driving your car without head restraints can lead to serious injury to you and your passenger in a crash.

Make sure the head restraints are in place and adjusted properly before driving.

Seat Heaters

*All 3.0 CL models with optional leather interior*

Both front seats are equipped with seat heaters. The ignition must be ON (II) to use them. To turn the heater on, press the appropriate button (L or R). Press the button again to turn the heater off.

Do not use the seat heaters if the engine is left idling for an extended period. They can weaken the battery, causing hard starting.
