2013 TSX
Online Reference Owner's Manual

This owner's manual should be considered a permanent part of the vehicle and should remain with the vehicle when it is sold.

This owner’s manual covers all models of your vehicle. You may find descriptions of equipment and features that are not on your particular model.

Images throughout this owner's manual (including the front cover) represent features and equipment that are available on some, but not all, models. Your particular model may not have some of these features.

This owner’s manual is for vehicles sold in the United States and Canada.

The information and specifications included in this publication were in effect at the time of approval for printing. Honda Motor Co., Ltd. reserves the right, however, to discontinue or change specifications or design at any time without notice and without incurring any obligation.

Safe Driving

Airbags
- Your vehicle is fitted with airbags to help protect you and your passengers during a moderate-to-severe collision.

Child Safety
- All children 12 and younger should be seated in the rear seat.
- Smaller children should be properly restrained in a forward-facing child seat.
- Infants must be properly restrained in a rear-facing child seat.

Exhaust Gas Hazard
- Your vehicle emits dangerous exhaust gases that contain carbon monoxide. Do not run the engine in confined spaces where carbon monoxide gas can accumulate.

Seat Belts
- Fasten your seat belt and sit upright well back in the seat.
- Check that your passengers are wearing their seat belts correctly.

Before Driving Checklist
- Before driving, check that the front seats, head restraints, steering wheel, and mirrors have been properly adjusted.

* Not available on all models
Instrument Panel ➡ P.63

## Controls

### Turn Signals

Turn Signal Control Lever

- Right
- Left

### Lights

Light Control Switches

- High Beam
- Low Beam
- Flashing

### Wipers and Washers

Wiper/Washer Control Lever

- Adjustment Ring
  - : Long Delay
  - : Short Delay

- MIST
- OFF
- INT: Low speed with intermittent
- LO: Low speed wipe
- HI: High speed wipe

Pull toward you to spray washer fluid.

*Not available on all models*
Steering Wheel  P.113
- To adjust, pull the adjustment lever towards you, adjust to the desired position, then lock the lever back in place.

Power Door Mirrors  P.114
- With the ignition switch in ON, move the selector switch to L or R.
- Push the appropriate edge of the adjustment switch to adjust the mirror.

Power Windows  P.100
- With the ignition switch in ON, open and close the power windows.
- If the power window lock button is in the off position, each passenger’s window can be opened and closed with its own switch.
- If the power window lock button is in the on position (indicator is on), each passenger’s window switch is disabled.

Trunk  P.95
- Push the trunk release on the driver’s door, or on the remote transmitter. With the doors unlocked, press the trunk release switch on the trunk lid to open it.

Trunk Release
- Place the selector switch in the R position to use the reverse tilt door mirror feature.
Climate Control System

- Press the AUTO button to activate the climate control system.
- Press the ON/OFF button to turn the system on or off.
- Press the button to defrost the windshield.

Models with navigation system
The climate control system is voice operable. See the navigation system manual for complete details.

Clock

1. Press the CLOCK button until the displayed time begins flashing.
2. Press Preset [4 (Hour)] or [5 (Minute)] to set the time. Press Preset [6 (Reset)] to set the time to the nearest hour.
3. Press the CLOCK button again to set the time.

Models with navigation system
The navigation system receives signals from GPS satellites, updating the clock automatically.

Air flows from floor and windshield defroster vents.
Air flows from floor vents.
Air flows from floor and dashboard vents, and back of the center console*.
Air flows from dashboard vents and back of the center console*.

Features  [P.137]

Audio System  [P.138]
See Navigation System Manual

For navigation system operation  See Navigation System Manual

- Audio Remote Controls  [P.160]

- **VOL** (volume) Button
  - Press \(\uparrow/\downarrow\) to adjust the volume up/down.

- **MODE** Button
  - Press and release to change the audio mode: FM1/FM2/AM/XM1/XM2/CD/AUX.

- **CH** (channel) Button
  - Radio: Press and release to change the preset station.
  - Press and hold to select the next or previous strong station.

  CD/USB device:
  - Press and release to skip to the beginning of the next song or return to the beginning of the current song.
  - Press and hold to change a folder.
Driving  \(\text{P.181}\)

**Manual Transmission  \(\text{P.199}\)**

**Automatic Transmission  \(\text{P.195}\)**

- **Paddle Shifters  \(\text{P.197}\)**

  - **Paddle Shifters** allow you to shift gears much like a manual transmission (1st through 5th). This is useful for engine braking.

  - **D-paddle shift mode**: The transmission will shift back to automatic mode once the system detects that the vehicle is cruising.

  - **Sequential shift mode**: Holds the selected gear, and the M indicator comes on.

  - **The selected gear position is shown in the instrument panel.**

**Shifting**

- **P Park**
  Turn off or start the engine. Transmission is locked.

- **R Reverse**
  Transmission is not locked.

- **N Neutral**
  Transmission is locked.

- **D Drive**
  Normal driving. D-paddle shift mode can be used.

- **S S Position**
  Sequential shift mode can be used.

Depress the brake pedal and press the release button to move out of **P**.

- Press the release button to move the shift lever.

- Move the shift lever without pressing the release button.
VSA® OFF Button  

- The vehicle stability assist (VSA®) system helps stabilize the vehicle during cornering, and helps maintain traction while accelerating on loose or slippery road surfaces.
- VSA® comes on automatically every time you start the engine.
- To turn VSA® on or off, press and hold the button until you hear a beep.

Cruise Control  

- Cruise control allows you to maintain a set speed without keeping your foot on the accelerator pedal.
- To use cruise control, press the CRUISE button, then press DECEL/SET when the vehicle speed is above 25 mph (40 km/h).

Tire Pressure Monitoring System (TPMS)  

- TPMS monitors tire pressure.
- TPMS is turned on automatically every time you start the engine.

Refueling  

Fuel recommendation:  

- 4-cylinder models: Premium unleaded gasoline with a pump octane number 91 or higher recommended  
- 6-cylinder models: Premium unleaded gasoline with a pump octane number 91 or higher required

Fuel tank capacity: 18.5 US gal (70 L)

1. Unlock the driver’s door.
2. Press on the edge of the fuel fill door to make it pop up slightly.
3. Turn the fuel fill cap slowly to remove the cap.
4. Place the cap in the holder on the fuel fill door.
5. After refueling, screw the cap back on until it clicks at least once.
Maintenance  \( \rightarrow \text{P. 221} \)

**Under the Hood**  \( \rightarrow \text{P. 229} \)
- Check engine oil, engine coolant, and windshield washer fluid. Add when necessary.
- Check brake fluid and clutch fluid.
- Check the battery regularly.

1. Pull the hood release handle under the corner of the dashboard.

2. Locate the hood latch lever, pull the lever up, and lift up the hood.

3. When finished, close the hood and make sure it is firmly locked in place.

**Wiper Blades**  \( \rightarrow \text{P. 257} \)
- Replace blades if they leave streaks across the windshield.

**Lights**  \( \rightarrow \text{P. 247} \)
- Inspect all lights regularly.

**Tires**  \( \rightarrow \text{P. 259} \)
- Inspect tires and wheels regularly.
- Check tire pressures regularly.
- Install snow tires for winter driving.
Handling the Unexpected  ➜ P. 275

Flat Tire ➜ P. 277
- Park in a safe location and replace the flat tire with the compact spare tire in the trunk.

Engine Won’t Start ➜ P. 283
- If the battery is dead, jump start using a booster battery.

Overheating ➜ P. 288
- Park in a safe location. If you do not see steam under the hood, open the hood, and let the engine cool down.

Indicators Come On ➜ P. 290
- Identify the indicator and consult the owner’s manual.

Blown Fuse ➜ P. 294
- Check for a blown fuse if an electrical device does not operate.

Emergency Towing ➜ P. 299
- Call a professional towing service if you need to tow your vehicle.
What to Do If

**Q** The ignition switch does not turn from 0 to 1. Why?

**A** • The steering wheel may be locked.
• Try to turn the steering wheel left and right while turning the ignition key.

**Q** The ignition switch does not turn from 1 to 0 and I cannot remove the key. Why?

**A** The shift lever should be moved to P.

**Q** Why does the brake pedal pulsate slightly when applying the brakes?

**A** This can occur when the ABS activates, and does not indicate a problem. Apply firm, steady pressure on the brake pedal. Never pump the brake pedal.

**Q** The rear door cannot be opened from inside the vehicle. Why?

**A** Check if the childproof lock is in the lock position. If so, open the rear door with the outside door handle. To cancel this function, push the lever to the unlock position.

**Q** Why do the doors lock after I unlocked the doors using a remote transmitter?

**A** If you do not open the doors within 30 seconds, the doors are relocked automatically for security.
Why does the beeper sound when I open the driver’s door?

**Q**

The beeper sounds when:
- The key is left in the ignition switch.
- The exterior lights are left on.

Why does the beeper sound when I start driving?

**Q**

The beeper sounds when:
- Driver and/or front passenger are not wearing their seat belts.
- The parking brake lever is not fully released.

Why do I hear a screeching sound when I apply the brake pedal?

**Q**

The brake pads may need to be replaced. Have your vehicle inspected by a dealer.

Is it possible to use unleaded gasoline with a Pump Octane Number (PON) of 87 or higher on this vehicle?

**Q**

If premium unleaded gasoline with a PON of 91 or higher is not available, you can temporarily use gasoline with a PON of 87 or higher. This will result in decreased engine performance, and can cause occasional metallic knocking noise in the engine.

4-cylinder models
Unleaded gasoline with a PON of 91 or higher is required.

6-cylinder models
Unleaded gasoline with a PON of 91 or higher is recommended.

The long-term use of a lower PON gasoline can lead to engine damage.
California Proposition 65 Warning

**WARNING:** This product contains or emits chemicals known to the state of California to cause cancer and birth defects or other reproductive harm.

Event Data Recorders
This vehicle is equipped with an event data recorder (EDR). The main purpose of an EDR is to record, in certain crash or near crash-like situations, such as an air bag deployment or hitting a road obstacle, data that will assist in understanding how a vehicle's systems performed. The EDR is designed to record data related to vehicle dynamics and safety systems for a short period of time, typically 30 seconds or less. The EDR in this vehicle is designed to record such data as:

- How various systems in your vehicle were operating;
- Whether or not the driver and passenger safety belts were buckled/fastened;
- How far (if at all) the driver was depressing the accelerator and/or brake pedal; and,
- How fast the vehicle was traveling.

These data can help provide a better understanding of the circumstances in which crashes and injuries occur. NOTE: EDR data are recorded by your vehicle only if a non-trivial crash situation occurs; no data are recorded by the EDR under normal driving conditions and no personal data (e.g., name, gender, age, and crash location) are recorded. However, other parties, such as law enforcement, could combine the EDR data with the type of personally identifying data routinely acquired during a crash investigation.

To read data recorded by an EDR, special equipment is required, and access to the vehicle or the EDR is needed. In addition to the vehicle manufacturer, other parties, such as law enforcement, that have the special equipment, can read the information if they have access to the vehicle or the EDR.

The data belongs to the vehicle owner and may not be accessed by anyone else except as legally required or with the permission of the vehicle owner.

Service Diagnostic Recorders
This vehicle is equipped with service-related devices that record information about powertrain performance. The data can be used to verify emissions law requirements and/or help technicians diagnose and solve service problems. It may also be combined with data from other sources for research purposes, but it remains confidential.

California Perchlorate Contamination Prevention Act
The airbags, seat belt tensioners, and CR type batteries in this vehicle may contain perchlorate materials - special handling may apply. See [www.dtsc.ca.gov/hazardouswaste/perchlorate/](http://www.dtsc.ca.gov/hazardouswaste/perchlorate/)

As you read this manual, you will find information that is preceded by a **NOTICE** symbol. This information is intended to help you avoid damage to your vehicle, other property, or the environment.
A Few Words About Safety

Your safety, and the safety of others, is very important. And operating this vehicle safely is an important responsibility.

To help you make informed decisions about safety, we have provided operating procedures and other information on labels and in this manual. This information alerts you to potential hazards that could hurt you or others.

Of course, it is not practical or possible to warn you about all the hazards associated with operating or maintaining your vehicle. You must use your own good judgement.

You will find this important safety information in a variety of forms, including:

- **Safety Labels** - on the vehicle.
- **Safety Messages** - preceded by a safety alert symbol and one of three signal words: DANGER, WARNING, or CAUTION. These signal words mean:
  - **DANGER** You WILL be KILLED or SERIOUSLY HURT if you don’t follow instructions.
  - **WARNING** You CAN be KILLED or SERIOUSLY HURT if you don’t follow instructions.
  - **CAUTION** You CAN be HURT if you don’t follow instructions.
- **Safety Headings** - such as Important Safety Precautions.
- **Safety Section** - such as Safe Driving.
- **Instructions** - how to use this vehicle correctly and safely.

This entire book is filled with important safety information - please read it carefully.
Safe Driving

You can find many safety recommendations throughout this chapter, and throughout this manual.

For Safe Driving

The following pages explain your vehicle’s safety features and how to use them properly. The safety precautions below are ones that we consider to be among the most important.

Important Safety Precautions

■ Always wear your seat belt
A seat belt is your best protection in all types of collisions. Airbags are designed to supplement seat belts, not replace them. So even though your vehicle is equipped with airbags, make sure you and your passengers always wear your seat belts, and wear them properly.

■ Restrain all children
Children age 12 and under should ride properly restrained in a back seat, not the front seat. Infants and small children should be restrained in a child seat. Larger children should use a booster seat and a lap/shoulder seat belt until they can use the belt properly without a booster seat.

■ Be aware of airbag hazards
While airbags can save lives, they can cause serious or fatal injuries to occupants who sit too close to them, or are not properly restrained. Infants, young children, and short adults are at the greatest risk. Be sure to follow all instructions and warnings in this manual.

■ Don’t drink and drive
Alcohol and driving don’t mix. Even one drink can reduce your ability to respond to changing conditions, and your reaction time gets worse with every additional drink. So don’t drink and drive, and don’t let your friends drink and drive, either.

Some states, provinces and territories prohibit the use of cell phones other than hands-free devices by the driver while driving.
For Safe Driving

Important Safety Precautions

■ Pay appropriate attention to the task of driving safely
Engaging in cell phone conversation or other activities that keep you from paying close attention to the road, other vehicles, and pedestrians could lead to a crash. Remember, situations can change quickly, and only you can decide when it is safe to divert some attention away from driving.

■ Control your speed
Excessive speed is a major factor in crash injuries and deaths. Generally, the higher the speed, the greater the risk, but serious injuries can also occur at lower speeds. Never drive faster than is safe for current conditions, regardless of the maximum speed posted.

■ Keep your vehicle in safe condition
Having a tire blowout or a mechanical failure can be extremely hazardous. To reduce the possibility of such problems, check your tire pressures and condition frequently, and perform all regularly scheduled maintenance.
Your Vehicle’s Safety Features

The following checklist will help you take an active role in protecting yourself and your passengers.

Your vehicle is equipped with many features that work together to help protect you and your passengers during a crash.

Some features do not require any action on your part. These include a strong steel framework that forms a safety cage around the passenger compartment, front and rear crush zones, a collapsible steering column, and tensioners that tighten the front seat belts in a sufficient crash.

However, you and your passengers cannot take full advantage of these features unless you remain seated in the correct position and always wear your seat belts. In fact, some safety features can contribute to injuries if they are not used properly.
For Safe Driving

For the safety of you and your passengers, make a habit of checking these items each time before you drive.

- After everyone has entered the vehicle, be sure all doors are closed and locked. Locking the doors helps prevent an occupant from being ejected and an outsider from unexpectedly opening a door.
  - Locking/Unlocking the Doors from the Inside P. 93

- Adjust your seat to a position suitable for driving. Be sure the front seats are adjusted as far to the rear as possible while allowing the driver to control the vehicle. Sitting too close to a front airbag can result in serious or fatal injury in a crash.
  - Adjusting the Seats P. 116

- Adjust head restraints to the proper position. Head restraints are most effective when the center of the head restraint aligns with the center of your head. Taller persons should adjust their head restraint to the highest position.
  - Adjusting the Head Restraints P. 118

- Always wear your seat belt, and make sure you wear it properly. Confirm that any passengers are properly belted as well.
  - Fastening a Seat Belt P. 29

- Protect children by using seat belts or child seats according to a child’s age, height and weight.
  - Child Safety P. 48

Safety Checklist

If the door and trunk open indicator is on, a door and/or the trunk is not completely closed. Close all doors and the trunk tightly until the indicator goes off.

- Door and Trunk Open Indicator P. 68
Seat Belts

About Your Seat Belts

Seat belts are the single most effective safety device because they keep you connected to the vehicle so that you can take advantage of many built-in safety features. They also help keep you from being thrown against the inside of the vehicle, against other passengers, or out of the vehicle. When worn properly, seat belts also keep your body properly positioned in a crash so that you can take full advantage of the additional protection provided by the airbags.

In addition, seat belts help protect you in almost every type of crash, including:
- frontal impacts
- side impacts
- rear impacts
- rollovers

Lap/shoulder seat belts

All five seating positions are equipped with lap/shoulder seat belts with emergency locking retractors. In normal driving the retractor lets you move freely while keeping some tension on the belt. During a collision or sudden stop the retractor locks to restrain your body. The rear seat belts also have a lockable retractor for use with child seats.

Installing a Child Seat with a Lap/Shoulder Seat Belt P. 55

WARNING

Not wearing a seat belt properly increases the chance of serious injury or death in a crash, even though your vehicle has airbags.

Be sure you and your passengers always wear seat belts and wear them properly.

Seat belts cannot completely protect you in every crash. But in most cases, seat belts can reduce your risk of serious injury.

Most states and all Canadian provinces and territories require you to wear seat belts.
Proper use of seat belts

Follow these guidelines for proper use:

- All occupants should sit upright, well back in the seat, and remain in that position for the duration of the trip. Slouching and leaning reduces the effectiveness of the belt and can increase the chance of serious injury in a crash.

- Never place the shoulder part of a lap/shoulder seat belt under your arm or behind your back. This could cause very serious injuries in a crash.

- Two people should never use the same seat belt. If they do, they could be very seriously injured in a crash.

- Do not put any accessories on the seat belts. Devices intended to improve comfort or reposition the shoulder part of a seat belt can reduce the protective capability and increase the chance of serious injury in a crash.

Seat Belt Reminder

Your vehicle monitors front seat belt use. If the ignition switch is turned to ON before the driver’s seat belt is fastened, a beeper will sound and the indicator will blink. If the driver does not fasten the belt before the beeper stops, the indicator will remain on.

The beeper will also periodically sound and the indicator will blink while driving until the driver’s and front passenger’s seat belts are fastened.

Seat Belt Reminder

If a rear seat passenger moves around and extends the seat belt, the lockable retractor may activate. If this happens, release the retractor by unfastening the seat belt and allow the belt to retract completely. Then refasten the belt.

About Your Seat Belts

If a front passenger does not fasten their seat belt within 6 seconds after the ignition switch is turned to ON.

When no one is sitting in the front passenger’s seat, or a child or small adult is riding there, the indicator will not come on.

This is because the weight sensors in the seat cannot detect their presence.
About Your Seat Belts

Automatic Seat Belt Tensioners

The front seats are equipped with automatic seat belt tensioners to enhance safety. The tensioners automatically tighten the front seat belts during a moderate-to-severe frontal collision, sometimes even if the collision is not severe enough to inflate the front airbags.

Automatic Seat Belt Tensioners

The seat belt tensioners can only operate once. If a tensioner is activated, the SRS indicator will come on. Have a dealer replace the tensioner and thoroughly inspect the seat belt system as it may not offer protection in a subsequent crash.

During a moderate-to-severe side impact, the tensioner on that side of the vehicle also activates.
Fastening a Seat Belt

After adjusting a front seat to the proper position, and while sitting upright and well back in the seat:

1. Pull the seat belt out slowly.

2. Insert the latch plate into the buckle, then tug on the belt to make sure the buckle is secure.
   - Make sure that the belt is not twisted or caught on anything.

No one should sit in a seat with an inoperative seat belt or one that does not appear to be working correctly. Using a seat belt that is not working properly may not protect the occupant in a crash. Have a dealer check the belt as soon as possible.

Never insert any foreign objects into the buckle or retractor mechanism.
Fastening a Seat Belt

Position the lap part of the belt as low as possible across your hips, then pull up on the shoulder part of the belt so the lap part fits snugly. This lets your strong pelvic bones take the force of a crash and reduces the chance of internal injuries.

If necessary, pull up on the belt again to remove any slack, then check that the belt rests across the center of your chest and over your shoulder. This spreads the forces of a crash over the strongest bones in your upper body.

Adjusting the Shoulder Anchor

The front seats have adjustable shoulder anchors to accommodate taller and shorter occupants.

1. Move the anchor up and down while holding the release button.

2. Position the anchor so that the belt rests across the center of your chest and over your shoulder.

WARNING

Improperly positioning the seat belts can cause serious injury or death in a crash.

Make sure all seat belts are properly positioned before driving.

To release the belt, push the red PRESS button then guide the belt by hand until it has retracted completely.

When exiting the vehicle, be sure the belt is out of the way and will not get caught by closing the door.

Adjusting the Shoulder Anchor

The shoulder anchor height can be adjusted to four levels. If the belt contacts your neck, lower the height one level at a time.

After an adjustment, make sure that the shoulder anchor position is secure.
Advice for Pregnant Women

If you are pregnant, the best way to protect yourself and your unborn child when driving or riding in a vehicle is to always wear a seat belt and keep the lap part of the belt as low as possible across the hips.

- Wear the shoulder belt across the chest avoiding the abdomen.
- Wear the lap part of the belt as low as possible across the hips.

Advice for Pregnant Women

Each time you have a checkup, ask your doctor if it is okay for you to drive.

To reduce the risk of injuries to both you and your unborn child that can be caused by an inflating front airbag:
- When driving, sit upright and adjust the seat as far back as possible while allowing full control of the vehicle.
- When sitting in the front passenger’s seat, adjust the seat as far back as possible.
Seat Belt Inspection

Regularly check the condition of your seat belts as follows:

- Pull each belt out fully, and look for frays, cuts, burns, and wear.
- Check that the latches work smoothly and the belts retract easily.
  If a belt does not retract easily, cleaning the belt may correct the problem. Only use a mild soap and warm water. Do not use bleach or cleaning solvents. Make sure the belt is completely dry before allowing it to retract.

Any belt that is not in good condition or working properly will not provide proper protection and should be replaced as soon as possible.

A belt that has been worn during a crash may not provide the same level of protection in a subsequent crash. Have your seat belts inspected by a dealer after any collision.

WARNING
Not checking or maintaining seat belts can result in serious injury or death if the seat belts do not work properly when needed.

Check your seat belts regularly and have any problem corrected as soon as possible.
Airbags

Airbag System Components
The front, front side, and side curtain airbags are deployed according to the direction and severity of impact. The airbag system includes:

1. Two SRS (Supplemental Restraint System) front airbags. The driver’s airbag is stored in the center of the steering wheel; the front passenger’s airbag is stored in the dashboard. Both are marked SRS AIRBAG.

2. Two side airbags, one for the driver and one for a front passenger. The airbags are stored in the outer edges of the seatbacks. Both are marked SIDE AIRBAG.

3. Two side curtain airbags, one for each side of the vehicle. The airbags are stored in the ceiling, above the side windows. The front and rear pillars are marked SIDE CURTAIN AIRBAG.

4. An electronic control unit that continually monitors and records information about the sensors, the airbag activators, the seat belt tensioners, and driver and front passenger seat belt use when the ignition switch is in ON.

5. Automatic front seat belt tensioners. The driver’s and front passenger’s seat belts incorporate sensors that detect whether or not they are fastened.

6. A driver’s seat position sensor. If the seat is too far forward, the airbag will inflate with less force.

7. Weight sensors in the front passenger’s seat. The front passenger’s airbag will be turned off if the weight on the seat is 65 lbs (29 kg) or less (the weight of an infant or small child).

8. Impact sensors that can detect a moderate-to-severe front or side collision.

9. An indicator on the dashboard that alerts you that the front passenger’s front airbag has been turned off.

10. Sensors that can detect if a child or small statured adult is in the deployment path of the front passenger’s side airbag.

11. An indicator on the instrument panel that alerts you to a possible problem with your airbag system or seat belt tensioners.

12. An indicator on the instrument panel that alerts you that the front passenger’s side airbag has been turned off.

13. Safing Sensor
Airbags can pose serious hazards. To do their job, airbags must inflate with tremendous force. So, while airbags help save lives, they can cause burns, bruises, and other minor injuries, and sometimes even fatal ones if occupants are not wearing their seat belts properly and sitting correctly.

**What you should do:** Always wear your seat belt properly, and sit upright and as far back from the steering wheel as possible while allowing full control of the vehicle. A front passenger should move their seat as far back from the dashboard as possible.

Remember, however, that no safety system can prevent all injuries or deaths that can occur in a severe crash, even when seat belts are properly worn and the airbags deploy.

**Do not place hard or sharp objects between yourself and a front airbag.** Carrying hard or sharp objects on your lap, or driving with a pipe or other sharp object in your mouth, can result in injuries if your front airbag inflates.

**Do not attach or place objects on the front airbag covers.** Objects on the covers marked SRS AIRBAG could interfere with the proper operation of the airbags or be propelled inside the vehicle and hurt someone if the airbags inflate.
Types of Airbags

Your vehicle is equipped with three types of airbags:

- **Front airbags**: Airbags in front of the driver’s and front passenger’s seats.
- **Side airbags**: Airbags in the driver’s and front passenger’s seat-backs.
- **Side curtain airbags**: Airbags above the side windows.

Each is discussed in the following pages.

Front Airbags (SRS)

The front SRS airbags inflate in a moderate-to-severe frontal collision to help protect the head and chest of the driver and/or front passenger.

SRS (Supplemental Restraint System) indicates that the airbags are designed to supplement seat belts, not replace them. Seat belts are the occupant’s primary restraint system.

Housing Locations

The front airbags are housed in the center of the steering wheel for the driver, and in the dashboard for the front passenger. Both airbags are marked SRS AIRBAG.
Continued

Airbags

Front Airbags (SRS)

Front airbags are designed to inflate during moderate-to-severe frontal collisions. When the vehicle decelerates suddenly, the sensors send information to the control unit which signals one or both front airbags to inflate.

A frontal collision can be either head-on or angled between two vehicles, or when a vehicle crashes into a stationary object, such as a concrete wall.

**Operation**

Front airbags are designed to inflate during moderate-to-severe frontal collisions. When the vehicle decelerates suddenly, the sensors send information to the control unit which signals one or both front airbags to inflate.

A frontal collision can be either head-on or angled between two vehicles, or when a vehicle crashes into a stationary object, such as a concrete wall.

**How the Front Airbags Work**

While your seat belt restrains your torso, the front airbag provides supplemental protection for your head and chest.

The front airbags deflate immediately so that they won’t interfere with the driver’s visibility or the ability to steer or operate other controls.

The total time for inflation and deflation is so fast that most occupants are not aware that the airbags deployed until they see them lying in front of them.

How the Front Airbags Work

After a front airbag inflates in a crash, you may see what looks like smoke. This is actually powder from the airbag’s surface. Although the powder is not harmful, people with respiratory problems may experience some temporary discomfort. If this occurs, get out of the vehicle as soon as it is safe to do so.

Although the driver’s and front passenger’s airbags normally inflate within a split second of each other, it is possible for only one airbag to deploy. This can happen if the severity of a collision is at the margin, or threshold, that determines whether or not the airbags will deploy. In such cases, the seat belt will provide sufficient protection, and the supplemental protection offered by the airbag would be minimal.
Airbags

Front Airbags (SRS)

■ When front airbags should not deploy

Minor frontal crashes: Front airbags were designed to supplement seat belts and help save lives, not to prevent minor scrapes, or even broken bones that might occur during a less than moderate-to-severe frontal crash.

Side impacts: Front airbags can provide protection when a sudden deceleration causes a driver or front passenger to move towards the front of the vehicle. Side airbags and side curtain airbags have been specifically designed to help reduce the severity of injuries that can occur during a moderate-to-severe side impact which can cause the driver or passenger to move towards the side of the vehicle.

Rear impacts: Head restraints and seat belts are your best protection during a rear impact. Front airbags cannot provide any significant protection and are not designed to deploy in such collisions.

Rollovers: Seat belts, and in vehicles equipped with a rollover sensor, side airbags, and side curtain airbags offer the best protection in a rollover. Because front airbags could provide little if any protection, they are not designed to deploy during a rollover.

■ When front airbags deploy with little or no visible damage

Because the airbag system senses sudden deceleration, a strong impact to the vehicle framework or suspension might cause one or more of the airbags to deploy. Examples include running into a curb, the edge of a hole, or other low fixed object that causes a sudden deceleration in the vehicle chassis. Since the impact is underneath the vehicle, damage may not be readily apparent.

■ When front airbags may not deploy, even though exterior damage appears severe

Since crushable body parts absorb crash energy during an impact, the amount of visible damage does not always indicate proper airbag operation. In fact, some collisions can result in severe damage but no airbag deployment because the airbags would not have been needed or would not have provided protection even if they had deployed.

Safe Driving
Advanced Airbags

Your front airbags have advanced features to help reduce the likelihood of airbag related injuries to smaller occupants.

The driver’s advanced front airbag system includes a seat position sensor.

If the seat is too far forward, the airbag inflates with less force, regardless of the severity of the impact.

The passenger’s advanced front airbag system has weight sensors.

Although Acura recommends against carrying an infant or small child in front, if the sensors detect the weight of a child (up to about 65 lbs or 29 kg), the system will automatically turn off the passenger’s front airbag.

If there is a problem with the driver’s seat position sensor, the SRS indicator will come on and the airbag will inflate with full (normal) force, regardless of the driver’s seating position.

For both advanced front airbags to work properly:
- Do not spill any liquid on or under the seats.
- Do not put any object under the passenger’s seat.
- Make sure any objects are positioned properly on the floor. Improperly positioned objects can interfere with the advanced airbag sensors.
- All occupants should sit upright and wear their seat belts properly.
- Do not place any cover over the passenger side dashboard.
Side Airbags

The side airbags help protect the upper torso of the driver or a front passenger during a moderate-to-severe side impact.

■ Housing Locations

The side airbags are housed in the outside edge of the driver’s and passenger’s seat-backs.

Both are marked SIDE AIRBAG.

■ Operation

When the sensors detect a moderate-to-severe side impact, the control unit signals the side airbag on the impact side to immediately inflate.

Do not attach accessories on or near the side airbags. They can interfere with the proper operation of the airbags, or hurt someone if an airbag inflates.

If the impact is on the passenger side, the airbag deploys even if there is no passenger in the passenger seat.

Do not cover or replace the front seat-back covers without consulting a dealer.

Improperly replacing or covering front seat-back covers can prevent your side airbags from properly deploying during a side impact.
■ When a side airbag deploys with little or no visible damage
Because the airbag systems senses sudden acceleration, a strong impact to the side of the vehicle’s framework can cause a side airbag to deploy. In such cases, there may be little or no damage, but the side impact sensors detected a severe enough impact to deploy the airbag.

■ When a side airbag may not deploy, even though visible damage appears severe
It is possible for a side airbag to not deploy during an impact that results in apparently severe damage. This can occur when the point of impact was towards the far front or rear of the vehicle, or when the vehicle’s crushable body parts absorbed most of the crash energy. In either case, the side airbag would not have been needed nor provided protection even if it had deployed.
Side Airbag Cutoff System

To reduce the likelihood that a front passenger may be injured by an inflating side airbag, the passenger side airbag is automatically turned off when:

- The height sensors detect a child or short-statured adult is seated in the front passenger seat.
- The position sensor detects that the front passenger is leaning into the deployment path of the side airbag.

When the side airbag cutoff system is activated, the side airbag off indicator comes on.

Side Airbag Off Indicator P. 46

Side Airbag Off Indicator

If the side airbag off indicator comes on, have the passenger sit upright. A few seconds after the passenger is sitting properly, the side airbag will automatically be turned on, and the indicator will go off.

If the front passenger is a child, stop when it is safe to do so, and have the child sit properly restrained in a rear seat.
Side Curtain Airbags

The side curtain airbags help protect the heads of the driver and passengers in outer seating positions during a moderate-to-severe side impact.

- Housing Locations
  The side curtain airbags are located in the ceiling above the side windows on both sides of the vehicle.

- Operation
  The side curtain airbag is designed to deploy in a moderate-to-severe side impact.

- When side curtain airbags deploy in a frontal collision
  One or both side curtain airbags may inflate in a moderate-to-severe angled frontal collision.
  In this case, the side curtain airbags will deploy slightly after the front airbags.

- Side Curtain Airbags
  The side curtain airbags are most effective when an occupant is wearing their seat belt properly and sitting upright, well back in their seat.
  Do not attach any objects to the side windows or roof pillars as they can interfere with the proper operation of the side curtain airbags.
Airbag System Indicators

If a problem occurs in the airbag system, the SRS indicator will come on and a message appears on the multi-information display.

SRS (Supplemental Restraint System) Indicator

- **When the ignition switch is turned to ON [II]**
  The indicator comes on for a few seconds, then goes off. This tells you the system is working properly.

If the indicator comes on at any other time, or does not come on at all, have the system checked by a dealer as soon as possible. If you don’t, your airbags and seat belt tensioners may not work properly when they are needed.

**WARNING**

Ignoring the SRS indicator can result in serious injury or death if the airbag systems or tensioners do not work properly.

Have your vehicle checked by a dealer as soon as possible if the SRS indicator alerts you to a possible problem.
■ When the passenger airbag off indicator comes on
The indicator comes on to alert you that the passenger’s front airbag has been turned off. This occurs when the weight sensors detect 65 lbs (29 kg) or less, the weight of an infant or small child, on the seat.

Infants and small children should always ride properly restrained in a back seat.

Objects placed on the seat can also cause the indicator to come on.

If the front passenger seat is empty, the passenger’s front airbag will not deploy and the indicator will not come on.
Airbags

Airbag System Indicators

> Side Airbag Off Indicator

When the side airbag off indicator comes on
This indicator comes on if the passenger’s side airbag has been turned off because the passenger is too small to be sitting in the front seat, is slouching or not sitting upright, or has leaned into the airbag’s deployment path.

Unless the passenger is a smaller statured adult or a child, the indicator should go off when the passenger returns to a proper upright sitting position.

When you turn the ignition switch to ON [II], the indicator should come on for a few seconds and then go out. If it doesn’t come on, stays on, or comes on while driving without a passenger in the front seat, have the system checked by a dealer as soon as possible.
Airbag Care

You do not need to, and should not, perform any maintenance on or replace any airbag system components yourself. However, you should have your vehicle inspected by a dealer in the following situations:

■ When the airbags have deployed
If an airbag has inflated, the control unit and other related parts must be replaced. Similarly, once an automatic seat belt tensioner has been activated, it must be replaced.

■ When the vehicle has been in a moderate-to-severe collision
Even if the airbags did not inflate, have your dealer inspect the following: the driver’s seat position sensor, weight sensors in the passenger’s seat, front seat belt tensioners, and each seat belt that was worn during the crash.

■ Do not remove or modify a front seat without consulting a dealer
This would likely disable the driver’s seat position sensor or the weight sensors in the passenger’s seat. If it is necessary to remove or modify a front seat to accommodate a person with disabilities, contact an Acura dealer, or for U.S. vehicles, Acura Client Relations at 1-800-382-2238 and for Canadian vehicles, Canadian Acura Client Service at 1-888-9-ACURA-9.

We recommend against the use of salvaged airbag system components, including the airbag, tensioners, sensors, and control unit.
Child Safety

Protecting Child Passengers

Each year, many children are injured or killed in vehicle crashes because they are either unrestrained or not properly restrained. In fact, vehicle accidents are the number one cause of death of children age 12 and under.

To reduce the number of child deaths and injuries, every state, Canadian province and territory requires that infants and children be properly restrained when they ride in a vehicle.

Children should sit properly restrained in a rear seat. This is because:

- An inflating front or side airbag can injure or kill a child sitting in the front seat.
- A child in the front seat is more likely to interfere with the driver’s ability to safely control the vehicle.
- Statistics show that children of all sizes and ages are safer when they are properly restrained in a rear seat.

WARNING

Children who are unrestrained or improperly restrained can be seriously injured or killed in a crash.

Any child too small for a seat belt should be properly restrained in a child seat. A larger child should be properly restrained with a seat belt, using a booster seat if necessary.

The National Highway Traffic Safety Administration and Transport Canada recommend that all children age 12 and under be properly restrained in a rear seat. Some states or provinces/territories have laws restricting where children may ride.
Protecting Child Passengers

- Any child who is too small to wear a seat belt correctly must be restrained in an approved child seat that is properly secured to the vehicle using either the lap belt portion of the lap/shoulder belt or the lower anchors of the LATCH system.

- Never hold a child on your lap because it is impossible to protect them in the event of a collision.

- Never put a seat belt over yourself and a child. During a crash, the belt would likely press deep into the child and cause serious or fatal injuries.

- Never let two children use the same seat belt. Both children could be very seriously injured in a crash.

- Do not allow children to operate the doors, windows or seat adjustments.

- Do not leave children in the vehicle unattended, especially in hot weather when the inside of the vehicle can get hot enough to kill them. They could also activate vehicle controls causing it to move unexpectedly.

WARNING

Allowing a child to play with a seat belt or wrap one around their neck can result in serious injury or death.

Instruct children not to play with any seat belt and make sure any unused seat belt a child can reach is buckled, fully retracted, and locked.

To deactivate a lockable retractor, release the buckle and allow the seat belt to wind up all the way.

To remind you of the passenger’s front airbag hazards and child safety, your vehicle has warning labels on the dashboard (U.S. models) and on the front visors. Please read and follow the instructions on these labels.

Safety Labels P. 61
Child Safety  

Safety of Infants and Small Children

Protecting Infants

An infant must be properly restrained in a rear-facing, reclining child seat until the infant reaches the seat maker’s weight or height limit for the seat, and the infant is at least one year old.

Positioning a rear-facing child seat

Child seats must be placed and secured in a rear seating position.

When properly installed, a rear-facing child seat may prevent the driver or a front passenger from moving their seat all the way back, or from locking their seat-back in the desired position.

It can also interfere with proper operation of the passenger’s advanced front airbag system.

WARNING

Placing a rear-facing child seat in the front seat can result in serious injury or death during a crash.

Always place a rear-facing child seat in the rear seat, not the front.

Rear-facing child seats should never be installed in a forward facing position.

Always refer to the child seat manufacturer’s instructions before installation.
■ Protecting Smaller Children

If a child is at least one year old and within the weight range indicated by the child seat manufacturer, the child should be properly restrained in a firmly secured forward-facing child seat.

### Forward-facing child seat placement

We strongly recommend placing a forward-facing child seat in a rear seating position.

Placing a forward-facing child seat in the front seat can be hazardous, even with advanced front airbags that automatically turn the passenger’s front airbag off. A rear seat is the safest place for a child.

### WARNING

Placing a forward-facing child seat in the front seat can result in serious injury or death if the front airbag inflates.

If you must place a forward-facing child seat in front, move the vehicle seat as far back as possible, and properly restrain the child.

Educate yourself about the laws and regulations regarding child seat use where you are driving, and follow the child seat manufacturer’s instructions.

Many experts recommend use of a rear-facing seat up to age two, if the child’s height and weight are appropriate for a rear-facing seat.
Selecting a Child Seat

Most child seats are LATCH-compatible (Lower Anchors and Tethers for Children). Some have a rigid-type connector, while others have a flexible-type connector. Both are equally easy to use. Some existing and previously owned child seats can only be installed using the seat belt. Whichever type you choose, follow the child seat manufacturer’s use and care instructions as well as the instructions in this manual. Proper installation is key to maximizing your child’s safety.

In seating positions and vehicles not equipped with LATCH, a LATCH-compatible child seat can be installed using the seat belt and a top tether for added security. This is because all child seats are required to be designed so that they can be secured with a lap belt or the lap part of a lap/shoulder belt. In addition, the child seat manufacturer may advise that a seat belt be used to attach a LATCH-compatible seat once a child reaches a specified weight. Please read the child seat owner’s manual for proper installation instructions.

Important consideration when selecting a child seat

Make sure the child seat meets the following three requirements:

- The child seat is the correct type and size for the child.
- The child seat is the correct type for the seating position.
- The child seat is compliant with Federal Motor Vehicle Safety Standard 213.
A LATCH-compatible child seat can be installed in either of the two outer rear seats. A child seat is attached to the lower anchors with either the rigid or flexible type of connectors.

1. Locate the lower anchors under the marks.

2. Place the child seat on the vehicle seat then attach the child seat to the lower anchors according to the instructions that came with the child seat.

When installing the child seat, make sure that the lower anchors are not obstructed by the seat belt or any other object.
Installing a LATCH-Compatible Child Seat

For your child's safety, when using a child seat installed using the LATCH system, make sure that the seat is properly secured to the vehicle. A child seat that is not properly secured will not adequately protect a child in a crash and may cause injury to the child or other vehicle occupants.

3. Open the tether anchor cover behind the head restraint.

4. Release the head restraint, then route the tether strap between the head restraint legs, and secure the tether strap hook onto the anchor.

5. Tighten the tether strap as instructed by the child seat maker.

6. Make sure the child seat is firmly secured by rocking it forward and back and side to side; little movement should be felt.

7. Make sure any unused seat belt that a child can reach is buckled, the lockable retractor is activated, and the belt is fully retracted and locked.
Installing a Child Seat with a Lap/Shoulder Seat Belt

1. Place the child seat on the vehicle seat.

2. Route the seat belt through the child seat according to the seat maker’s instructions, and insert the latch plate into the buckle.
   - Insert the latch plate fully until it clicks.

3. Slowly pull the shoulder part of the belt all the way out until it stops. This activates the lockable retractor.

4. Let the seat belt completely wind up into the retractor, then try to pull it out to make sure the retractor is locked.
   - If you are able to pull the shoulder belt out, the lockable retractor is not activated. Pull the seat belt all the way out, and repeat steps 2 – 4.

5. Grab the shoulder part of the seat belt near the buckle, and pull up to remove any slack from the lap part of the belt.
   - When doing this, place your weight on the child seat and push it into the vehicle seat.

Continued
6. Make sure the child seat is firmly secured by rocking it forward and back and side to side; little movement should be felt.

7. Make sure any unused seat belt that a child can reach is buckled, the lockable retractor is activated, and the belt is fully retracted and locked.

Installing a Child Seat with a Lap/Shoulder Seat Belt

A child seat that is not properly secured will not adequately protect a child in a crash and may cause injury to the child or other vehicle occupants.

To deactivate a lockable retractor, release the buckle and allow the seat belt to wind up all the way.
Adding Security with a Tether

A tether anchorage point is provided behind each rear seating position. A child seat that is installed with a seat belt and comes with a tether can use the tether for additional security.

1. Locate the appropriate tether anchorage point and lift the cover.
2. Raise the head restraint to its highest position, then route the tether strap through the head restraint legs. Make sure the strap is not twisted.
3. Secure the tether strap hook onto the anchor.
4. Tighten the tether strap as instructed by the child seat manufacturer.

Since a tether can provide additional security to the lap/shoulder seat belt installation, we recommend using a tether whenever one is available.
Safety of Larger Children

Protecting Larger Children

The following pages give instructions on how to check proper seat belt fit, what kind of booster seat to use if one is needed, and important precautions for a child who must sit in front.

Checking Seat Belt Fit

When a child is too big for a child seat, secure the child in a rear seat using the lap/shoulder seat belt. Have the child sit upright and all the way back, then answer the following questions.

■ Checklist
  • Do the child’s knees bend comfortably over the edge of the seat?
  • Does the shoulder belt cross between the child’s neck and arm?
  • Is the lap part of the seat belt as low as possible, touching the child’s thighs?
  • Will the child be able to stay seated like this for the whole trip?

If you answer yes to all these questions, the child is ready to wear the lap/shoulder seat belt correctly. If you answer no to any question, the child needs to ride on a booster seat until the seat belt fits properly without a booster seat.

WARNING

Allowing a child age 12 or under to sit in front can result in serious injury or death if the passenger’s front airbag inflates.

If a larger child must ride in front, move the vehicle seat as far to the rear as possible, have the child sit up properly and wear the seat belt properly, using a booster seat if needed.
If a lap/shoulder seat belt cannot be used properly, position the child in a booster seat in a rear seating position. For the child’s safety, check that the child meets the booster seat manufacturer’s recommendations.

Booster Seats

If a lap/shoulder seat belt cannot be used properly, position the child in a booster seat in a rear seating position. For the child’s safety, check that the child meets the booster seat manufacturer’s recommendations.

Protecting Larger Children - Final Checks

Your vehicle has a rear seat where children can be properly restrained. If you ever have to carry a group of children, and a child must ride in front:

- Make sure you read and fully understand the instructions and safety information in this manual.
- Move the front passenger seat as far back as possible.
- Have the child sit upright and well back in the seat.
- Check that the seat belt is properly positioned so that the child is secure in the seat.

Monitoring child passengers

We strongly recommend that you keep an eye on child passengers. Even older, more mature children sometimes need to be reminded to fasten their seat belts and sit up properly.
Exhaust Gas Hazard

**Carbon Monoxide Gas**
The engine exhaust from this vehicle contains carbon monoxide, a colorless, odorless, and highly toxic gas. As long as you properly maintain your vehicle, carbon monoxide gas will not get into the interior.

- **Have the exhaust system inspected for leaks whenever**
  - The exhaust system is making an unusual noise.
  - The exhaust system may have been damaged.
  - The vehicle is raised for an oil change.

When you operate a vehicle with the trunk open, airflow can pull exhaust gas into the interior and create a hazardous condition. If you must drive with the trunk open, open all the windows and set the climate control system as shown below.

1. Select the fresh air mode.
2. Select the \( \mathbf{F} \) mode.
3. Set the fan speed to high.
4. Set the temperature control to a comfortable setting.

Adjust the climate control system in the same manner if you sit in your parked vehicle with the engine running.

**WARNING**
Carbon monoxide gas is toxic. Breathing it can cause unconsciousness and even kill you.

Avoid any enclosed areas or activities that expose you to carbon monoxide.

An enclosed area such as a garage can quickly fill up with carbon monoxide gas.

Do not run the engine with the garage door closed.

Even when the garage door is open, drive out of the garage immediately after starting the engine.
Safety Labels

Label Locations

These labels are in the locations shown. They warn you of potential hazards that can cause serious injury or death. Read these labels carefully.

If a label comes off or becomes hard to read (except for the U.S. dashboard label which may be removed by the owner), contact a dealer for a replacement.
This chapter describes the buttons, indicators, and gauges that are used while driving.

Gauges and Multi-Information Display

**Gauges**
Gauges include the speedometer, tachometer, fuel gauge, and temperature gauge. They are displayed when the ignition switch is in ON [II].

- **Speedometer**
Displays your driving speed in mph (U.S.) or km/h (Canada).

- **Fuel Gauge**
Displays the amount of fuel left in the fuel tank.

- **Temperature Gauge**
Displays the temperature of the engine coolant.

- **Tachometer**
Shows the number of engine revolutions per minute.

**NOTICE**
You should refuel when the reading approaches E. Running out of fuel can cause the engine to misfire, damaging the catalytic converter.

The actual amount of remaining fuel may differ from the fuel gauge reading.

**NOTICE**
Driving with the temperature gauge pointer in the upper zone can cause serious engine damage. Pull safely to the side of the road and allow engine temperature to return to normal.

**Overheating** P. 288
**Multi-Information Display**

The multi-information display shows the odometer, trip meter, outside temperature indicator, and other gauges. It also displays important messages such as warnings and other helpful information.

### Switching the Display

Press the information button or the SEL/RESET button to change the display.

*Not available on all models*
Gauges and Multi-Information Display

### Odometer
Shows the total number of miles (U.S.) or kilometers (Canada) that your vehicle has accumulated.

### Trip Meter
Shows the total number of miles (U.S.) or kilometers (Canada) driven since the last reset. Meters A and B can be used to measure 2 separate trips.

#### Resetting a trip meter
To reset a trip meter, display it, then press and hold the SEL/RESET button. The trip meter is reset to 0.0.

### Trip Meter
Switch between trip meter A and trip meter B by pressing the SEL/RESET button.
Gauges and Multi-Information Display

Outside Temperature
Shows the outside temperature in Fahrenheit (U.S.) or Celsius (Canada).

Adjusting the outside temperature display
Adjust the temperature reading up to ±5°F or ±3°C if the temperature reading seems incorrect.

Instant Fuel Economy
Shows the instant fuel economy as a bar graph in mpg or l/100 km.

Average Fuel Economy
Shows the estimated average fuel economy of each trip meter in mpg (U.S.) or l/100 km (Canada). The display is updated at set intervals. When a trip meter is reset, the average fuel economy is also reset.

Range
Shows the estimated distance you can travel on the fuel remaining. This distance is estimated from the fuel economy of your trips in the past.

Outside Temperature
The temperature sensor is in the front bumper. Road heat and exhaust from another vehicle can affect the temperature reading when your vehicle speed is less than 19 mph (30 km/h).

It may take several minutes for the display to be updated after the temperature reading has stabilized.

Use the multi-information display’s customized features to correct the temperature.

Customized Features P. 80

Average Fuel Economy
You can change whether to reset the average fuel economy.

Customized Features P. 80
Gauges and Multi-Information Display

**Elapsed Time**
The elapsed time display shows the time during one drive cycle.

**Average Speed**
The display shows the average speed in mph (U.S.) or km/h (Canada) since the last time Trip A was reset.

**Engine Oil Life**
Shows the remaining oil life and Maintenance Minder™.

**Tire Pressure Monitor**
Shows each tire’s pressure.

**Bluetooth® HandsFreeLink®**
Shows your paired cell phone’s information.
Customized Features

Use the multi-information display to customize certain features.

How to customize

Press and hold the ▲/▼ button for a few seconds while the ignition switch is in ON II.

Customized Features

To customize other features, press the ▲/▼ button.

- List of customizable options P. 82
- Example for customization settings P. 84

Customization is possible when you see the driver’s ID (DRIVER 1 or DRIVER 2) on the CHG setting screen.

The driver’s ID indicates which remote transmitter you have used to unlock the driver’s door.

The customized settings are recalled every time you unlock the driver’s door with that remote.

When you customize settings:

- Automatic transmission models
  - Shift to P

- Manual transmission models
  - Set the parking brake
Customization flow

Press and hold the ▲/▼ button.

**DEFAULT ALL** Sets/Cancels all the customized settings as default. SET/CANCEL

---

*1: Default Setting  
*2: Default Setting for automatic transmission  
*3: Default Setting for manual transmission
**Example for customization settings**

The steps for changing the TRIP A RESET with REFUEL setting to ON are shown below. The default setting for TRIP A RESET with REFUEL is OFF.

1. Press and hold the ▲/▼ button until CHG SETTING appears on the display.

2. Press the SEL/RESET button to go into the METER SETUP group.

3. Press the SEL/RESET button again. LANGUAGE SELECTION appears first in the display.
4. Press the button until TRIP A RESET with REFUEL appears on the display, then press the SEL/RESET button. The display switches to the Customization setup screen, where you can select ON, OFF, or EXIT.

5. Press the button and select ON, then press the SEL/RESET button. The ON setup screen appears, then the display returns to the Customization menu screen.

6. Press the button until EXIT appears in the display, then press the SEL/RESET button.

7. Repeat step 6 until you return to the normal screen.

Controls

Setting the Clock

Clock

Models without navigation system
You can adjust the time in the clock display, using the CLOCK button.

Adjusting the Time

1. Press the MENU button.
2. Rotate to select CLOCK ADJUST in the display.
3. Press. CLOCK ADJUST appears.
4. Rotate to select the item you want to adjust (12/24 hour mode, hour, minute). Then press.
5. Rotate to make the adjustment.
6. Press to enter your selection. The display returns to CLOCK ADJUST. Repeat steps 4 to 6 to adjust other items.
7. To enter the selection, Rotate and select SET, then press.
8. Press the MENU button to go back to the normal display.

Clock

You can switch the clock display between 24 hours and 12 hours when in the menu mode.

Selector Knob Icon details
Rotate to select.
Press to enter.

To set the time to the nearest hour:
Press and hold the CLOCK button until the clock display begins to blink, then press the (3) (Reset) button.

Depending on the displayed time, the clock sets forward or backward.

Example:
1:06 will reset to 1:00
1:53 will reset to 2:00

Models with navigation system
The clock is automatically updated through the navigation system, so the time does not need to be adjusted.
Locking and Unlocking the Doors

Key Types and Functions

This vehicle comes with the following keys:

- [Retractable Master Keys]

Use the keys to start and stop the engine, and to lock and unlock all the doors, trunk, and fuel fill door. You can also use the remote transmitter to lock and unlock the doors, trunk, and fuel fill door.

Models with a driving position system

The seat automatically moves to the preset position when you unlock the door using the remote transmitter on the master key.

Driving Position Memory System* P. 111

The master key folds up inside the remote transmitter.

1. Press the release button to release the key out from the transmitter.
   - Make sure to fully extend the key.

2. To close the key, press the release button then push the key inside the transmitter until you hear a click.

Immobilizer System

All the keys have an immobilizer system. The immobilizer system helps to protect against vehicle theft.

Driving Position Memory System* P. 111

The keys contain precision electronics. Adhere to the following advice to prevent damage to the electronics:

- Do not leave the keys in direct sunlight, or in locations with high temperature or high humidity.
- Do not drop the keys or set heavy objects on them.
- Keep the keys away from liquids.
- Do not take the keys apart except for replacing the battery.

If the circuits in the keys are damaged, the engine may not start, and the remote transmitter may not work.

If the keys do not work properly, have them inspected by a dealer.

If the key is not fully extended, the immobilizer system may not work properly, and the engine may not start.

Avoid contact with the key whenever it extends or retracts.

* Not available on all models
Locking and Unlocking the Doors

Key Types and Functions

■ Valet Key
Can be used to start and stop the engine, and lock and unlock driver’s door.

■ Key Number Tag
Contains a number that you will need if you purchase a replacement key.

Valet Key
When you need to leave a key with a third party, leave the valet key.

Key Number Tag
Keep the key number tag separate from the key in a safe place outside of your vehicle. If you wish to purchase an additional key, contact a dealer.
If you lose your key and you cannot start the engine, contact a dealer.
Locking and Unlocking the Doors

Locking/Unlocking the Doors from the Outside

■ Using the Remote Transmitter

Press the lock button.

Once:

- Some exterior lights flash, all the doors, trunk, and fuel fill door lock, and the security system sets.

Twice (within five seconds after the first push):

- A beeper sounds and verifies the security system is set.

■ Unlocking the doors

Press the unlock button.

Once:

- Some exterior lights flash twice, and the driver's door and fuel fill door unlocks.

Twice:

- The remaining doors and the trunk unlock.

Using the Remote Transmitter

Open the door within 30 seconds.
If you do not open a door within 30 seconds of unlocking the vehicle with the remote transmitter, the doors will automatically relock.

If the interior light switch is in the door activated position, the interior lights come on when you press the unlock button.

No doors opened: The lights fade out after 30 seconds.
Doors relocked with the remote: The lights go off immediately.

Interior Lights P. 125

The remote transmitter uses low-power signals, so the operating range may vary depending on the surroundings.

The remote transmitter will not work when the key is in the ignition switch. The remote will not lock the vehicle when a door is open.

If the distance at which it works varies, the battery is probably low.
If the LED does not come on when you press a button, the battery is dead.

Replacing the Battery P. 269

Continued
Locking and Unlocking the Doors

Locking/Unlocking the Doors from the Outside

Controls

Fully insert the key and turn it.

If you are using the master key, make sure it is fully extended.

Locking the driver’s door
Pull the lock tab rearward or push the master door lock switch in the lock direction, and close the door.

Locking the passenger’s doors
Pull the lock tab rearward and close the door.

Lockout prevention system
The doors cannot be locked when the key is in the ignition switch, and any door is open.

Locking/Unlocking the Doors Using a Key

When you lock the driver’s door with a key, all the other doors, trunk, and fuel fill door lock at the same time. When unlocking, the driver’s door and fuel fill door unlock first. Turn the key a second time within a few seconds to unlock the remaining doors and the trunk.

Locking a Door Without Using a Key

When you lock the driver’s door, all the other doors, trunk, and fuel fill door lock at the same time. Make sure you have the key in your hand before locking the door to prevent it from being locked in the vehicle.
Locking and Unlocking the Doors

Locking/Unlocking the Doors from the Inside

- **Using the Lock Tab**
  - **Locking a door**
    Pull the lock tab rearward.
  - **Unlocking a door**
    Push the lock tab forward.

- **Using the Master Door Lock Switch**
  Press the master door lock switch in as shown to lock or unlock all doors.

- **Using the Lock Tab**
  When you lock the door using the lock tab on the driver’s door, all the other doors, trunk, and fuel fill door lock at the same time.
  When you unlock the door using the lock tab on the driver’s door, only the driver’s door will unlock.

- **Using the Master Door Lock Switch**
  When you lock/unlock the driver’s door using the master lock switch, all the other doors, trunk, and fuel fill door lock/unlock at the same time.
Childproof Door Locks

The childproof door locks prevent the rear doors from being opened from the inside regardless of the position of the lock tab.

Setting the Childproof Door Locks

Slide the lever in the rear door to the lock position, and close the door.

When opening the door

Open the door using the outside door handle.

Auto Door Lock/Unlock

Auto door lock

The auto door lock function automatically locks all the doors when the vehicle reaches about 10 mph (15 km/h).

Auto door unlock

Automatic transmission models

When you depress the brake pedal and move the shift lever to [P], the driver’s door automatically unlocks.

Manual transmission models

When you depress the brake pedal and turn the ignition switch to LOCK [0], the driver’s door automatically unlocks.
Opening and Closing the Trunk

Precautions for Opening/Closing the Trunk

■ Opening the trunk
Open the trunk all the way.
  ► If it is not fully opened, the trunk lid may begin to close under its own weight.

■ Closing the trunk
Keep the trunk lid closed while driving to:
  ► Avoid possible damage.
  ► Prevent exhaust gas from leaking into the vehicle.

Using the Trunk Opener

Pressing the trunk release to the lower left of the driver’s seat unlocks and opens the trunk.
Opening and Closing the Trunk

Using the Remote Transmitter

Press the trunk release button for approximately one second to unlock and open the trunk.

Using the Trunk Release Switch

Push up the release switch on the trunk lid after the doors are unlocked.
Opening and Closing the Trunk

Trunk Main Switch

The trunk main switch disables the trunk opener on the driver’s side and the trunk release button on the trunk lid to protect luggage in the trunk.

1. Make sure the rear seat-backs are not folded down.
2. Turn off the trunk main switch in the glove box.
3. Lock the glove box.

Emergency Trunk Opener

The trunk release lever allows you to open the trunk from inside for your safety.

Slide the release lever in the direction of the arrow.

If you need to give the key to someone else, give them the valet key.

The trunk release button on the remote transmitter is always enabled, even when the trunk main switch is off.

Parents should decide if their children should be shown how to use this feature.
Security System

Immobilizer System

The immobilizer system prevents a key that has not been pre-registered from starting the engine. Each key contains electronic transmitters that use electronic signals to verify the key.

Pay attention to the following when inserting the key into the ignition switch.
- Do not allow objects that emit strong radio waves near the ignition switch.
- Make sure the key is not covered by or touching a metal object.
- Do not bring a key from another vehicle’s immobilizer system near the ignition switch.

Security System Alarm

The security system alarm activates when the doors, trunk, or hood are opened without the key, or remote transmitter. It also activates if you turn the ignition switch to ON after locking the doors with the remote transmitter.

■ When the security system alarm activates
The horn sounds intermittently, and all the exterior lights flash.

■ To deactivate the security system alarm
Unlock the vehicle using the key, or remote transmitter. The system, along with the horn and flashing lights, are deactivated.

NOTICE
Leaving the ignition key in the vehicle can result in theft or accidental movement of the vehicle. Always take the ignition key with you whenever you leave the vehicle unattended.

Do not alter the system or add other devices to it. Doing so may damage the system and make your vehicle inoperable.

Security System Alarm
The security alarm continues for a maximum of two minutes until the security system deactivates.
Setting the security system alarm
The security system alarm automatically sets when the following conditions have been met:
- The ignition switch is in LOCK 0, and the key has been removed from the ignition switch.
- The hood and trunk are closed.
- All doors are locked with the remote transmitter.

When the security system alarm sets
The security system alarm indicator in the instrument panel blinks. When the blinking interval changes after about 15 seconds, the security system alarm is set.

To cancel the security system alarm
The security system alarm is canceled when the vehicle is unlocked using the key or remote transmitter. The security system alarm indicator goes off at the same time.

Panic Mode

The PANIC button on the remote transmitter
If you press the PANIC button for approximately one second, the following will occur:
- The horn sounds.
- Some exterior lights flash for about 30 seconds.

Canceling panic mode
Press any button on the remote transmitter, or turn the ignition switch to ON 1.

Do not set the security system alarm when someone is in the vehicle or a window is open. The system can accidentally activate when:
- Unlocking the door with the lock tab or the master door lock switch.
- Opening the trunk with the release button on the driver’s door or the emergency trunk opener.

If the battery goes dead after you have set the security system alarm, the security alarm may go off once the battery is recharged or replaced. If this occurs, deactivate the security system alarm by unlocking a door using the key or remote transmitter.

Do not attempt to alter this system or add another device to it.
Opening and Closing the Windows

Opening/Closing the Power Windows

The power windows can be opened and closed when the ignition switch is in ON (II), using the switches on the doors. The driver’s side switches can be used to open and close all the windows.

The power window lock button on the driver’s side must be switched off (not pushed in, indicator off) to open and close the windows from anywhere other than the driver’s seat.

When the power window lock button is turned on (pushed in, indicator on), you can only operate the driver’s window. Turn the power window lock button on when children are in the vehicle.

■ Automatic operation

To open: Push the switch down firmly.

To close: Pull the switch up firmly.

The window opens or closes completely. To stop the window at any time, push or pull the switch briefly.

■ Manual operation

To open: Push the switch down lightly.

To close: Pull the switch up lightly.

Release the switch when the window reaches the desired position.

■ Opening/Closing Windows with Auto-Open/Close Function

Opening/Closing the Power Windows

The power windows can be operated for up to 10 minutes after you turn the ignition switch off. Opening either front door cancels this function.

Auto Reverse

If a power window senses resistance when closing automatically, it will stop closing and reverse direction.

The driver’s window auto reverse function is disabled when you continuously pull up the switch.

The auto reverse function stops sensing when the window is almost closed to ensure that it fully closes.

WARNING

Closing a power window on someone’s hands or fingers can cause serious injury.

Make sure your passengers are away from the windows before closing them.
Opening and Closing the Windows

Opening/Closing the Power Windows

To open:
Push the switch down.

To close:
Pull the switch up.
Release the switch when the window reaches the desired position.

Opening Windows and Moonroof with the Remote Transmitter

To open:
Press the unlock button twice within 10 seconds and hold it down for the second time. If the windows stop midway, repeat the procedure.

Continued
Opening/Closing the Power Windows

Controls

To open:
Unlock the driver’s door with the key. Within 10 seconds of returning the key to the central position, turn the key in the unlock direction and hold it there.

To close:
Lock the driver’s door with the key. Within 10 seconds of returning the key to the central position, turn the key in the lock direction and hold it there.

Release the key to stop the windows/moonroof at the desired position. If you want further adjustment, repeat the same operation.
Opening and Closing the Moonroof

You can only operate the moonroof when the ignition switch is in ON [II]. Use the switch in the front of the ceiling to open and close the moonroof.

■ Automatic operation
  To open: Pull the switch back firmly, then release.
  To close: Push the switch forward firmly, then release.

The moonroof will automatically open or close all the way. To stop the moonroof midway, touch the switch briefly.

■ Manual operation
  To open: Pull the switch back, and hold it until the desired position is reached.
  To close: Push the switch forward, and hold it until the desired position is reached.

■ Tilting the moonroof up
  To tilt: Push on the center of the moonroof switch.
  To close: Push the switch forward firmly, then release.

---

WARNING

Opening or closing the moonroof on someone’s hands or fingers can cause serious injury.

Make sure all hands and fingers are clear of the moonroof before opening or closing it.

NOTICE

Opening the moonroof in below freezing temperature or when it is covered with snow or ice can damage the moonroof panel or motor.

The power moonroof can be operated for up to 10 minutes after you turn the ignition switch off. Opening either front door cancels this function.

When resistance is detected, the auto reverse function causes the moonroof to change directions, then stop. Auto reverse stops sensing when the moonroof is almost closed to ensure that it fully closes. Make sure that all objects, including fingers, are clear of the moonroof.
Operating the Switches Around the Steering Wheel

**Ignition Switch**

LOCK: Insert and remove the key in this position.

ACCESSORY: Operate the audio system and other accessories in this position.

ON: This is the position when driving.

START: This position is for starting the engine. The switch returns to ON when you let go of the key.

**WARNING**

Removing the key from the ignition switch while driving locks the steering. This can cause you to lose control of the vehicle.

Remove the key from the ignition switch only when parked.

**Manual transmission models**

You cannot take the key out unless the shift lever is in P.

**Automatic transmission models**

If you open the driver's door when the key is in LOCK or ACCESSORY, a warning buzzer will sound to remind you to take the key out. When this happens, the following messages appear on the multi-information display:

- In LOCK: REMOVE KEY.
- In ACCESSORY: REMOVE KEY. The buzzer will stop when you take the key out.

If the key won't turn from LOCK to ACCESSORY, turn the key while moving the steering wheel left and right. The steering wheel will unlock, allowing the key to turn.
Turn Signals

The turn signals can be used when the ignition switch is in ON [II].

Light Switches

- **High beams**
  - Push the lever forward until you hear a click.
- **Low beams**
  - When in high beams, pull the lever back to return to low beams.
- **Flashing the high beams**
  - Pull the lever back, and release it.

If you remove the key from the ignition switch while the light is on, a chime sounds when the driver's door is opened.

Repeatedly turning the headlights on and off reduces the life of the HID headlight bulbs. If you sense that the level of the headlights is abnormal, have the vehicle inspected by a dealer.

Do not leave the lights on when the engine is off because it will cause the battery to discharge.
Automatic Operation (automatic lighting control)

Automatic lighting control can be used when the ignition switch is in ON II.

When you turn the light switch to AUTO, the headlights and other exterior lights will switch on and off automatically depending on the ambient brightness.

- You can change the auto light sensitivity setting.
  
  Customized Features P. 80

Automatic lighting off feature

The headlights, all other exterior lights, and the instrument panel lights turn off within 15 seconds after you remove the key and close the driver’s door.

- You can change the headlight auto off timer setting.
  
  Customized Features P. 80

If you turn the ignition switch to LOCK 0 with the headlight switch on, but do not open the door, the lights turn off after 10 minutes (3 minutes, if the switch is in the AUTO position).

The lights turn on again when you unlock or open the driver’s door. If you unlock the door, but do not open it within 15 seconds, the lights go off. If you open the driver’s door, you will hear a lights on reminder chime.

<table>
<thead>
<tr>
<th>Setting</th>
<th>The exterior lights come on when the ambient light is at</th>

<tr>
<td>MIN</td>
<td>Dark</td>
</tr>
</tbody>
</table>
Fog Lights

When the low beam headlights are on, turn the fog light switch on to use the fog lights.

Daytime Running Lights

The high beam headlights come on slightly dimmer than normal when the following conditions have been met:

- The ignition switch is in ON II.
- The headlight switch is off, or in FD (heads up).
- The parking brake is released.

The lights remain on even if you set the parking brake. Turning off the ignition switch will turn off the daytime running lights.

The high beam headlights return to the original brightness once the headlight switch is turned on.

Fog Light Switch

When the fog lights are on, the indicator in the instrument panel will be on.

Indicators P. 64
Wipers and Washers

Front Wiper/Washer

The windshield wipers and washers can be used when the ignition switch is in ON. The windshield wipers run at high speed until you release the lever.

MIST

The wipers run at high speed until you release the lever.

Wiper switch (OFF, INT, LO, HI)

Change the wiper switch setting according to the amount of rain.

Adjusting the delay

Turn the adjustment ring to adjust the wiper delay.

Washer

Sprays while you pull the lever toward you. When you release the lever, the wipers make two or three more sweeps before stopping.

NOTICE

Do not use the wipers when the windshield is dry. The windshield will get scratched, or the rubber blades will get damaged.

NOTICE

In cold weather, the blades may freeze to the windshield, becoming stuck. Operating the wipers in this condition may damage the wipers. Use the defroster to warm the windshield, then turn the wipers on.

If the vehicle speeds up while the wipers are operating intermittently, the length of the wipe interval shortens. When the vehicle starts moving, the wipers make a single sweep.

The wiper operation of the shortest delay setting and the LO setting become the same when the vehicle speeds up.

Turn the washers off if no washer fluid comes out. The pump may get damaged.
Brightness Control

When the parking lights are turned on and the ignition switch is in ON [II], you can use the brightness control knob to adjust instrument panel brightness.

- **Brighten**: Turn the knob to the right.
- **Dim**: Turn the knob to the left.

You will hear a beep when the brightness reaches minimum or maximum. The multi-information display will return to its original state several seconds after you adjust the brightness.

[Light bulb image]

- **Brightness level indicator**
  The brightness level is shown on the multi-information display while you are adjusting it. As the brightness level increases to the right, the instrument panel gets brighter.
Press the rear defogger and heated door mirror button to defog the rear window and mirrors when the ignition is in ON. The rear defogger and heated door mirrors automatically switch off after 10-30 minutes depending on the outside temperature. However, if the outside temperature is 32°F (0°C) or below, they do not automatically switch off.

**NOTICE**

When cleaning the inside of the rear window, be careful not to damage the heating wires. It is critical to wipe the window from side to side along the defogger heating wires. This system consumes a lot of power, so turn it off when the window has been defogged. Also, do not use the system for a long period when the engine is idling. This may weaken the battery, making it difficult to start the engine.
Driving Position Memory System*

You can store two driver’s seat positions with the driving position memory system. When you unlock and open the driver’s door with a remote transmitter, the seat adjusts automatically to one of the two preset positions.

The multi-information display shows you which remote transmitter you used to unlock the vehicle when you enter.

- Driver 1 transmitter is linked to memory button 1.
- Driver 2 transmitter is linked to memory button 2.

* Not available on all models
1. Adjust the driver’s seat to the desired position, and turn the ignition switch to ON [ II ].

2. Press the SET button.
   - You will hear the beeper, and the memory button indicator light will blink.

   - Once the seat position has been memorized, the indicator light on the button you pressed stays on.

Recalling the Stored Position

1. Move the shift lever to [ P ].
2. Apply the parking brake.
   - You will hear the beeper, and the indicator light will blink.

The seat will automatically move to the memorized position. When it has finished moving, you will hear the beeper, and the indicator light stays on.

Storing a Position in Memory

After you press the SET button, the storing operation will be canceled when:
- You do not press the memory button within five seconds.
- You readjust the seat position before the double-beep.
- You turn the ignition switch to any position except ON [ II ].
Adjusting the Steering Wheel

The steering wheel height and distance from your body can be adjusted so that you can comfortably grip the steering wheel in an appropriate driving posture.

1. Pull the steering wheel adjustment lever up.
   - The steering wheel adjustment lever is under the steering column.
2. Move the steering wheel up or down, and in or out.
   - Make sure you can see the instrument panel gauges and indicators.
3. Push the steering wheel adjustment lever down to lock the steering wheel in position.
   - After adjusting the position, make sure you have securely locked the steering wheel in place by trying to move it up, down, in, and out.

**WARNING**

Adjusting the steering wheel position while driving may cause you to lose control of the vehicle and be seriously injured in a crash.

Adjust the steering wheel only when the vehicle is stopped.

Make any steering wheel adjustments before you start driving.
Adjusting the Mirror

Interior Rearview Mirror
Adjust the angle of the rearview mirror when you are sitting in the correct driving position.

Automatic Dimming Rearview Mirror
When driving after dark, the automatic dimming rearview mirror reduces the glare from headlight's behind you. Press the auto button to turn this function on and off. When activated, the auto indicator comes on.

Power Door Mirrors
You can adjust the door mirrors when the ignition switch is in ON II.

Mirror position adjustment
L/R selector switch: Select the left or right mirror. After adjusting the mirror, return the switch to the center position.

Mirror position adjustment switch: Press the switch left, right, up, or down to move the mirror.

Keep the inside and outside mirrors clean and adjusted for best visibility.

Adjust the mirrors before you start driving.

The auto dimming function cancels when the shift position is in R.
Adjusting the Mirror

Power Door Mirrors

If activated, the passenger side door mirror automatically tilts downward when you put the shift lever in (R); this improves close-in visibility on the passenger side of the vehicle when backing up. The mirror automatically returns to its original position when you shift out of (R).

To activate this feature, turn the ignition switch to ON and slide the selector switch to the passenger’s side.
Adjusting the Seats

Adjusting the Seat Positions

Adjust the driver's seat as far back as possible while allowing you to maintain full control of the vehicle. You should be able to sit upright, well back in the seat and be able to adequately press the pedals without leaning forward, and grip the steering wheel comfortably. The passenger's seat should be adjusted in a similar manner, so that it is as far back from the front airbag in the dashboard as possible.

**WARNING**

Sitting too close to a front airbag can result in serious injury or death if the front airbags inflate.

Always sit as far back from the front airbags as possible while maintaining control of the vehicle.

The National Highway Traffic Safety Administration and Transport Canada recommend that drivers allow at least 10 inches (25 cm) between the center of the steering wheel and the chest.

Always make seat adjustments before driving.
Adjusting the Seats

Adjusting the Seat Positions

Adjust the driver’s seat-back to a comfortable, upright position, leaving ample space between your chest and the airbag cover in the center of the steering wheel.

The front seat passenger should also adjust their seat-back to a comfortable, upright position.

Reclining a seat-back so that the shoulder part of the belt no longer rests against the occupant’s chest reduces the protective capability of the belt. It also increases the chance of sliding under the belt in a crash and being seriously injured. The farther a seat-back is reclined, the greater the risk of injury.

⚠️ WARNING
Reclining the seat-back too far can result in serious injury or death in a crash.

Adjust the seat-back to an upright position, and sit well back in the seat.

Do not put a cushion, or other object, between the seat-back and your back.

Doing so may interfere with proper seat belt or airbag operation.

If you cannot get far enough away from the steering wheel and still reach the controls, we recommend that you investigate whether some type of adaptive equipment may help.
Adjusting the Head Restraints

Your vehicle is equipped with head restraints in all seating positions.

Head restraints are most effective for protection against whiplash and other rear-impact crash injuries when the center of the back of the occupant’s head rests against the center of the restraint. The tops of the occupant’s ears should be level with the center height of the restraint.

Adjusting the front and rear outer head restraint positions

To raise the head restraint: Pull it upward.
To lower the head restraint: Push it down while pressing the release button.

WARNING

Improperly positioning head restraints reduces their effectiveness and increases the likelihood of serious injury in a crash.

Make sure head restraints are in place and positioned properly before driving.

The driver’s and front passenger’s seats have active head restraints.

Active Head Restraints P. 122
Adjusting the Seats

Adjusting the Seat Positions

A passenger sitting in the center back seating position should adjust the height of their head restraint to an appropriate position before the vehicle begins moving.

To raise the head restraint:
Pull it upward.

To lower the head restraint:
Push it down while pressing the release button.

Removing and Reinstalling the Head Restraint Position

Head restraints can be removed for cleaning or repair.

To remove a head restraint:
Pull the restraint up as far as it will go. Then push the release button, and pull the restraint up and out.

To reinstall a head restraint:
Insert the legs back in place, then adjust the head restraint to an appropriate height while pressing the release button. Pull up on the restraint to make sure it is locked in position.

Changing the Center Rear Seat Head Restraint Position

Removing and Reinstalling the Head Restraints

WARNING
Failure to reinstall, or correctly reinstall, the head restraints can result in severe injury during a crash.

Always replace the head restraints before driving.
Adjusting the Driver’s Seat Lumbar Support

The firmness of the seat-back can be adjusted.

**To make it firmer:**
Pull the lever backward.

**To make it less firm:**
Push the lever forward.
Maintain a Proper Sitting Position

After all occupants have adjusted their seats and head restraints, and put on their seat belts, it is very important that they continue to sit upright, well back in their seats, with their feet on the floor, until the vehicle is safely parked and the engine is off.

Sitting improperly can increase the chance of injury during a crash. For example, if an occupant slouches, lies down, turns sideways, sits forward, leans forward or sideways, or puts one or both feet up, the chance of injury during a crash is greatly increased.

In addition, an occupant who is out of position in the front seat can be seriously or fatally injured in a crash by striking interior parts of the vehicle or being struck by an inflating front airbag.

**WARNING**

Sitting improperly or out of position can result in serious injury or death in a crash.

Always sit upright, well back in the seat, with your feet on the floor.
Adjusting the Seats

■ Active Head Restraints

The driver’s and front passenger’s seats have active head restraints. In a rear impact, an occupant properly secured by a seat belt will be pushed against the seat-back and the head restraint will move forward. This reduces the distance between the restraint and the occupant’s head, which helps reduce the likelihood of whiplash and injuries to the neck and upper spine.

■ Active Head Restraints

In order for the active head restraints to operate properly:
• Do not hang any items on the head restraints, or from the restraint legs.
• Do not place any object between an occupant and the seat-back.
• Install each restraint in its proper location.

After a collision, the activated restraint should return to its normal position. If the restraint does not return to its normal position, or in the event of a severe collision, have the vehicle inspected by a dealer.

## Rear Seats

### Folding Down the Rear Seats

1. Remove the center shoulder belt from the guide.

2. Pull the release lever in the trunk to release the lock.

3. Fold the seat-back down.

   If the rear head restraints get caught on the front seat-backs, remove the head restraints.

   - [Removing and Reinstalling the Head Restraints](#)

---

### Adjusting the Seats

2013 TSX

Folding Down the Rear Seats

The rear seat-backs can be folded down to accommodate bulkier items in the trunk.

Never drive with a seat-back folded down and the trunk lid open.

- [Carbon Monoxide Gas](#)

To lock a seat-back upright, push it backwards until it locks.

When returning a seat-back to it’s original position, push it firmly back. Also, make sure all rear shoulder belts are positioned in front of the seat-back, and the center shoulder belt is re-positioned in the guide.

Make sure that the folded seat-back does not press against the front passenger seat, as this can cause the weight sensors in the front passenger seat to work improperly.

- [Passenger Airbag Off Indicator](#)

Also make sure all items in the trunk or items extending through the opening into the rear seats are properly secured. Loose items can fly forward if you have to brake hard.
Adjusting the Seats

Armrest

- **Using the Front Seat Armrest**
  The console lid can be used as an armrest.

  **To adjust:**
  Push the release lever and slide the armrest to a desired position. Release the lever to lock the position.

- **Using the Rear Seat Armrest**
  Pull down the armrest in the center seat-back.
Interior Lights/Interior Convenience Items

Interior Lights

■ Interior Light Switches

<table>
<thead>
<tr>
<th>Front</th>
<th>Door Activated Position</th>
<th>On</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td></td>
<td>Off</td>
</tr>
</tbody>
</table>

■ ON
The interior lights come on regardless of whether the doors are open or closed.

■ Door activated
The interior lights come on in the following situations:
- When any of the doors are opened.
- You unlock the driver’s door.
- You remove the key from the ignition switch.

■ OFF
The interior lights remain off regardless of whether the doors are open or closed.

■ Map Lights

The map lights can be turned on and off by pressing the lenses.

In the door activated position, the interior lights fade out and go off about 30 seconds after the doors are closed. The lights go off after 30 seconds in the following situations:
- When you unlock the driver’s door but do not open it.
- When you remove the key from the ignition switch but do not open a door.

You can change the interior lights dimming time.

If you leave any of the doors open without the key in the ignition switch, the interior lights go off after about 15 minutes.

When the ceiling light switch is in the door activated position and any door is open, the map light will not go off when you press the lens.
Interior Convenience Items

### Glove Box

Pull the handle to open the glove box. You can lock the glove box with the master key.

**WARNING**

An open glove box can cause serious injury to your passenger in a crash, even if the passenger is wearing the seat belt.

Always keep the glove box closed while driving.

The glove box light comes on when the parking lights are on.

- **Glove Box**

  The shelf in the glove box is detachable. To remove it, disengage the tabs.
Interior Lights/Interior Convenience Items

Console Compartment

Pull the handle to open the console compartment.

To use the console lid as an armrest, slide it to the desired position while pulling up the release lever.

You can keep beverage bottles and cans cool with the air conditioning system.

1. Turn the dial counterclockwise to open the air vent in the console compartment.
2. Turn on the climate control system and adjust the temperature to cool.
3. Set the mode control or .
   The cool air is diverted through the air vent.

Use only resealable containers or keep unopened cans in the console compartment. Spilled liquids can damage the upholstery and electrical components in the console compartment.

When the heater begins to divert warm air, the airflow into the console compartment is shut off.
■ Front seat beverage holders
Press the raised detent to open the lid. To close the lid, push it down until it latches.

■ Rear seat beverage holders
Fold the armrest down to use the rear seat beverage holders.

NOTICE
Spilled liquids can damage the upholstery, carpeting, and electrical components in the interior.

Be careful when you are using the beverage holders. Hot liquid can scald you.
There are two accessory power sockets; one in the console compartment and the other at the front of the center console. They can be used when the ignition switch is in ACCESSORY or ON.

Open the cover to use it.

**NOTICE**

Do not insert an automotive type cigarette lighter element.

This can overheat the power socket.

The accessory power socket is designed to supply power for 12 volt DC accessories that are rated 120 watts or less (10 amps).

To prevent battery drain, only use the power socket with the engine running.

When both sockets are being used, the combined power rating of the accessories should not exceed 120 watts (10 amps).
There are coat hooks on the rear left and right grab handles. Pull them down to use them.

The cargo hooks in the trunk can be used to install a net for securing items.
To open the sunglasses holder, push and release the indent. To close, push it again until it latches.

You can store eyeglasses and other small items in this holder.

Keep the holder closed while driving except when accessing stored items.
The ignition switch must be in ON [II] to use the seat heaters. The HI setting heats the seats faster than the LO setting.

There is no heater in the passenger’s seat-back due to the side airbag cutoff system.

While in HI, the heater cycles on and off. The appropriate indicator will be on while the seat heater is on. Briefly press the button on the opposite side to turn the heater off. The indicator will be off. When a comfortable temperature is reached, select LO to keep the seat warm.
Using Automatic Climate Control

The automatic climate control system maintains the interior temperature you select. The system also selects the proper mix of heated or cooled air that will as quickly as possible, raise or lower the interior temperature to your preference.

Use the system when the engine is running.
1. Press the AUTO button.
2. Adjust the interior temperature using the driver's side or passenger's side control switch.
3. Press the ON/OFF button to cancel.

Switching between the recirculation and fresh air modes
Press the (recirculation) button and switch the mode depending on environmental conditions.

Recirculation Mode (indicator on): Recirculates air from the vehicle’s interior through the system.

Fresh Air Mode (indicator off): Maintains outside ventilation. Keep the system in fresh air mode in normal situations.

* Not available on all models

If any buttons are pressed while using the climate control system in auto, the function of the button that was pressed will take priority.

The AUTO indicator will go off, but functions unrelated to the button that was pressed will be controlled automatically.

To prevent cold air from blowing in from outside, the fan may not start immediately when the AUTO button is pressed.

Once you have set the desired temperature, do not use the temperature control switches more than necessary.

Doing so may delay the time it takes to reach the set temperature.

If the interior is very warm, you can cool it down more rapidly by partially opening the windows, turning the system on auto, and setting the temperature to low. Change the fresh mode to recirculation mode until the temperature cools down.

When you set the temperature to the lower or upper limit, Lo or Hi is displayed.

Pressing the ON/OFF button switches the climate control system between on and off. When turned on, the system returns to your last selection.
**Defrosting the Windshield and Windows**

Pressing the button turns the air conditioner system on and automatically switches the system to fresh air mode.

Press the button again to turn off, the system returns to the previous settings.

**To rapidly defrost the windows**

1. Press the button.
2. Press the button.

---

**Defrosting the Windshield and Windows**

*For your safety, make sure you have a clear view through all the windows before driving.*

Do not set the temperature near the upper or lower limit.

When cold air hits the windshield, the outside of the windshield may fog up.

If the side windows fog up, adjust the vents so that the air hits the side windows.

After defrosting or defogging the windows, switch over to fresh air mode. If you keep the system in recirculation mode, the windows may fog up from humidity. This impedes visibility.
Synchronized Mode

You can set the temperature synchronously for the driver side and the passenger side in synchronized mode.

1. Press the **SYNC** button.
   - The system will switch to synchronized mode.

2. Adjust the temperature using driver’s side temperature control switch.

Press the **SYNC** button to return to dual mode.

When you press the **SYNC** button, the system changes to synchronized mode.

When the system is in dual mode, the driver side temperature and the passenger side temperature can be set separately.
**Climate Control System**

**Automatic Climate Control Sensors**

The automatic climate control system is equipped with a sunlight sensor and an interior temperature sensor. Do not cover or spill any liquid on them.
This chapter describes how to operate technology features.

Audio System

About Your Audio System

On models with the navigation system, see the Navigation System Manual for operation of the audio system, AcuraLink®, Bluetooth® HandsFreeLink®, and voice commands for these features.

The audio system features AM/FM radio and the XM® Radio service. It can also play CDs, WMA/MP3/AAC files, iPod®, USB flash drives, and Bluetooth® devices.

You can operate the audio system from the buttons and switches on the panel, or the remote controls on the steering wheel.

XM® Radio is available on a subscription basis only. For more information on XM® Radio, contact a dealer.

XM® Radio is available in the United States and Canada, except Hawaii, Alaska, and Puerto Rico.

XM® is a registered trademark of SiriusXM Radio, Inc.

Video CDs, DVDs, and 3-inch (8-cm) mini CDs are not supported.

iPod® is a registered trademark owned by Apple Inc.

State or local laws may limit the circumstances in which you can launch or control your attached audio device.
USB Adapter Cable

1. Unclip the USB connector and loosen the adapter cable.

2. Connect the iPod® dock connector or the USB flash drive to the USB connector.

- Do not leave the iPod® or USB flash drive in the vehicle. Direct sunlight and high temperatures may damage it.
- Do not use an extension cable with the USB adapter cable.
- Do not connect the iPod® or USB flash drive using a hub.
- Do not use a device such as a card reader or hard disk drive, as the device or your files may be damaged.
- We recommend backing up your data before using the device in your vehicle.
- Displayed messages may vary depending on the device model and software version.

If the audio system does not recognize the iPod®, try reconnecting it a few times or reboot the device. To reboot, follow the manufacturer’s instructions provided with the iPod® or visit www.apple.com/ipod.
Auxiliary Input Jack

Use the jack in the console compartment to connect standard audio devices.

1. Open the AUX cover.
2. Connect a standard audio device to the input jack using a 1/8 inch (3.5 mm) stereo mini-plug.

The audio system automatically switches to the AUX mode.

Audio System Theft Protection

The audio system is disabled when it is disconnected from the power source, such as when the battery is disconnected or goes dead.

- **Entering the audio security code**
  
  ENTER CODE appears on the display when the power is reconnected.
  
  1. Turn on the audio system.
  2. Enter the audio security code using the preset buttons. If you enter an incorrect digit, continue to the last digit, then try again. If you do not enter the code correctly after 10 tries, you need to visit a dealer to have the system reset.

Auxiliary Input Jack

To switch the mode, press any of the audio mode buttons. You can return to the AUX mode by pressing the **AUX** button.

You cannot use the auxiliary input jack if you replace the audio system.

Audio System Theft Protection

Find the audio system’s security code and serial number on the radio code card.

Do not store the card in your vehicle. If you lose the radio code card, you must obtain the information from a dealer.
Audio System Basic Operation

To use the audio system function, the ignition switch must be in ACCESSORY (1) or ON (2).

Use the selector knob or MENU button to access some audio functions.

Press ☐ to switch between the normal and extended display for some functions. The extended display has three segments to display detailed information.

Selector knob: Rotate left or right to scroll through the available choices. Press ☐ to set your selection.

MENU button: Press to select any setting such as the clock, sound control, or the compass. Press this button again to cancel the menu display mode.

RETURN button: Press to go back to the previous display.

These indications are used to show how to operate the selector knob.

Rotate ☐ to select.

Press ☐ to enter.
Audio System Basic Operation

Adjusting the Sound

Press the MENU button, and rotate \( \circlearrowleft \) to adjust the setting. Rotate \( \circlearrowright \) to scroll through the following choices:

- BASS
- TREBLE
- FADER
- BALANCE
- SUBW
- SVC
- CLOCK ADJUST

FADER is selectable.

When the adjustment level reaches the center, you will see \( \mathbf{C} \) in the display.

The SVC has four modes: OFF, LOW, MID, and HIGH.

SVC adjusts the volume level based on the vehicle speed. As you go faster, audio volume increases. As you slow down, audio volume decreases.
Playing the AM/FM Radio

**VOL/ Knob**
Press to turn the audio system on and off.
Turn to adjust the volume.

**AM/FM Button**
Press to select a band.

**SCAN Button**
Press to sample each of the strongest stations on the selected band for 10 seconds.
To turn off scan, press the button again.

**TITLE Button**
Press to switch the RDS name on and off.

**CATEGORY Bar**
Press either side to display and select an RDS category.

**Preset Buttons (1-6)**
To store a station:
1. Tune to the selected station.
2. Pick a preset button and hold it until you hear a beep.
To listen to a stored station, select a band, then press the preset button.

**A.SEL (Auto Select) Button**
Press to scan both bands and store the strongest station in each preset.
To turn off auto select, press the button again. This restores the presets you originally set.

**Selector Knob**
Turn to tune the radio frequency.
Audio System Basic Operation

Playing the AM/FM Radio

Radio Data System (RDS)
Provides text data information related to your selected RDS capable FM station.

RDS INFO ON
Press the TITLE button while listening to an RDS capable station. RDS INFO ON appears, and the station name is displayed.

To find an RDS station from your selected program category
1. Press the CATEGORY bar to display and select an RDS category.
2. Use SKIP or SCAN to select an RDS station.

Radio Data System (RDS)
The display shows up to 31 characters of text data. Press and hold the TITLE button to see additional characters. ▶ indicates that the text data continues. The display goes back to the previous screen if you press and hold the button again.

Playing the AM/FM Radio
The ST indicator appears on the display indicating stereo FM broadcasts.
Stereo reproduction in AM is not available.
Switching the Audio Mode
Press the MODE button on the steering wheel.

Audio Remote Controls P. 160
You can store six AM stations and twelve FM stations in the preset buttons. FM1 and FM2 let you store six stations each.
A.SEL function scans and stores up to six AM stations and twelve FM stations with a strong signal in the preset buttons.
If you do not like the stations auto select has stored, you can store other frequencies in the preset buttons manually.
Playing the XM® Radio

(XM®) Button
Press to select XM® Radio.

TITLE Button
Press and release to cycle the display between the name, title, and category.

CATEGORY Bar
Press either side to display and select an XM® Radio category.

SCAN Button
Press to sample all channels (in the channel mode), or channels within a category (in the category mode).
Each sampling continues for a few seconds.
Press SCAN again to cancel scanning and continue listening to the channel.

VOL/ Knob
Press to turn the audio system on and off.
Turn to adjust the volume.

Preset Buttons (1-6)
To store the channel:
1. Select the channel.
2. Pick a preset button and hold it until you hear a beep.
To listen to a stored station, select XM, then press the preset button.

SKIP Bar
Press to skip to the previous or next channel.

MENU Button
Press to display the menu items.

Selector Knob
Turn to select channels.

Continued
Audio System Basic Operation

To Play the XM® Radio

1. Press the \( \text{XM} \) button to select the XM® radio band (XM1 or XM2).

2. Press and hold the TITLE button to switch between the channel mode and category mode.
   - If you press the MENU button, rotate \( \text{TUNE} \) to select \text{MODE/CATEGORY} or \text{MODE CHANNEL}. Each time you press \( \text{TUNE} \), the mode switches between them.
   - Press the \( \text{TITLE} \) button to enter the setting.

3. Select a channel using the TUNE ( ), SKIP, CATEGORY, SCAN, or Preset buttons.

To Select a Channel from a List

1. Press \( \text{TUNE} \) to display a channel list.

2. Rotate \( \text{TUNE} \) to select a channel, then press \( \text{TUNE} \).

Channel list is shown.
Playing a CD

Your audio system supports audio CDs, CD-Rs and CD-RWs in either MP3 or WMA format. With the CD loaded, press the CD button.

SCAN Button
You will get a 10-second sampling of each song.
- Press to sample all tracks on the CD (all files in the current folder in MP3 or WMA).
- Press two times to sample the first file in each of the main folders (MP3 or WMA).
- To turn off scan, press and hold the button.

Knob
Press to turn the audio system on and off.
Turn to adjust the volume.

TITLE Button
Press to display the text data on a CD (if it was recorded with text data).

CATEGORY Bar
Press ▲ to skip to the next folder, and ▼ to skip to the beginning of the previous folder in MP3 or WMA.

CD Button
Press to play a CD.

CD Slot
Insert a CD about halfway into the CD slot.

(SCD Eject) Button
Press to eject a CD.

SKIP Bar
Press ▶ or ◀ to change tracks (files in MP3 or WMA).

MENU Button
Press to display menu items (if available).

Selector Knob
Turn to change tracks/files. Turn to select an item, then press ENTER to set your selection.

RETURN Button
Press to go back to the previous display.
How to Select a File from a Folder with the Selector Knob (MP3/WMA)

1. Press \( \text{ } \) to switch the display to a folder list.

2. Rotate \( \text{ } \) to select a folder.

3. Press \( \text{ } \) to change the display to a list of files in that folder.

4. Rotate \( \text{ } \) to select a file, then press

---

NOTICE

Do not use CDs with adhesive labels. The label can cause the CD to jam in the unit.

WMA files protected by digital rights management (DRM) cannot be played. The audio system displays UNSUPPORTED, then skips to the next file.

Text data appears on the display under the following circumstances:

- When you select a new folder, file, or track.
- When you change the audio mode to CD.
- When you insert a CD.

The display shows up to 31 characters of text data. Press and hold the TITLE button to see additional characters. \( \text{ } \) indicates that the text data continues. The display goes back to the previous screen if you press and hold the button again.

If you eject the CD but do not remove it from the slot, the system reloads the CD automatically after several seconds.
Audio System Basic Operation

Playing a CD

You can select repeat, random, and scan modes when playing a track or files.

1. Press the MENU button.

2. Rotate to select PLAY MODE, then press .

3. Rotate to select a mode, then press .

■ How to Select a Play Mode

Press the RETURN button to go back to the previous display, and press the MENU button to cancel this setting mode.

Play Mode Menu Items
NORMAL PLAY
REPEAT ONE TRACK: Repeats the current track/file(s).
REPEAT ONE FLD (MP3/WMA): Repeats all files in the current folder.
RANDOM IN DISC: Plays all tracks/files in random order.
RANDOM IN FLD (MP3/WMA): Plays all files in the current folder in random order.
SCAN TRK: Samples all tracks on the CD.
(MP3/WMA): Samples all files in the current folder.
SCAN FLD (MP3/WMA): Samples the first file in each folder.

■ To turn off a play mode

1. Press the MENU button.

2. Rotate to select PLAY MODE, then press .

3. Rotate to select NORMAL PLAY, then press .
Playing an iPod®

Connect the iPod® using your dock connector to the USB adapter cable, then press the AUX button.

USB Adapter Cable P. 139
How to Select a File from the iPod® Menu

1. Press 🎧 to display the iPod® menu.

2. Rotate 📨 to select a menu.

3. Press 🎧 to display the items on that menu.

4. Rotate 📨 to select an item, then press 🎧.

Playing an iPod®

Available operating functions vary on models or versions. Some functions may not be available on the vehicle’s audio system.

If there is a problem, you may see an error message on the audio display.

iPad®/USB Flash Drive P. 159
How to Select a Play Mode

You can select repeat and shuffle modes when playing a file.

1. Press the MENU button.

2. Rotate to select PLAY MODE, then press .

3. Rotate to select a mode, then press .

To turn off a play mode

1. Press the MENU button.

2. Rotate to select PLAY MODE, then press .

3. Rotate to select NORMAL PLAY, then press .
Playing a USB Flash Drive

Your audio system reads and plays sound files on a USB flash drive in either MP3, WMA or ACC*1 format.

Connect your USB flash drive to the USB adapter cable, then press the AUX button.

*1: Only AAC format files recorded with iTunes® are playable on this audio unit.
How to Select a File from a Folder with the Selector Knob

1. Press \( \) to switch the display to a folder list.

2. Rotate \( \) to select a folder.

3. Press \( \) to change the display to a list of files in that folder.

4. Rotate \( \) to select a file, then press \( \).
Audio System Basic Operation

Playing a USB Flash Drive

You can select repeat, random, and scan modes when playing a file(s).

1. Press the MENU button.

2. Rotate to select PLAY MODE, then press .

3. Rotate to select a mode, then press .

To turn off a play mode

1. Press the MENU button.

2. Rotate to select PLAY MODE, then press .

3. Rotate to select NORMAL PLAY, then press .

How to Select a Play Mode

Play Mode Menu Items

NORMAL PLAY

REPEAT ONE TRACK: Repeats the current file.

REPEAT ONE FLD: Repeats all files in the current folder.

RANDOM IN FLD: Plays all files in the current folder in random order.

RANDOM ALL: Plays all files in random order.

SCAN TRK: Samples all files in the current folder.

SCAN FLD: Samples the first file in each folder.
Playing Bluetooth® Audio

Your audio system allows you to listen to music from your Bluetooth®-compatible phone.

This function is available when the phone is paired and linked to the vehicle’s Bluetooth® HandsFreeLink® (HFL) system.

Not all Bluetooth-enabled phones with streaming audio capabilities are compatible with the system. You can find an approved phone by visiting www.acura.com/handsfreelink, or by calling the HandsFreeLink® consumer support at 1-888-528-7876.

In Canada, visit www.handsfreelink.ca, or call 1-888-528-7876.

In some states, it may be illegal to perform some data device functions while driving.

If more than one phone is paired to the HFL system, there will be a delay before the system begins to play.

Selector Knob
Turn to change files. Turn to select an item, then press ENTER to set your selection.

AUX Button
Press to select Bluetooth® Audio.

TITLE Button
Press to confirm the device name.

RETURN Button
Press to go back to the previous display.

VOL/Knob
Press to turn the audio system on and off. Turn to adjust the volume.

SKIP Bar
Press ‹‹ or ‹› to change files.

MENU Button
Press to display menu items.
Audio System Basic Operation
Playing Bluetooth® Audio

To Play Bluetooth® Audio Files

1. Make sure that your phone is linked to HFL.
2. Press the AUX button.

Check the following if the phone is not recognized:
Another HFL-compatible phone, which is not compatible for Bluetooth® Audio, is already linked.

To pause or resume a file

1. Press the MENU button.
2. Rotate 🎤 to select RESUME/PAUSE, then press 🎤.

Each time you press 🎤, the setting switches between PAUSE and RESUME.

Switching to HFL

Press the 🎤 (HFL Talk) button on the steering wheel to receive a call when Bluetooth® Audio is playing.

Press the 🎤 (HFL Back) button to end the call and return to Bluetooth® Audio.

Switching to HFL

If you receive a call while Bluetooth® Audio is in the pause mode, it will resume play after ending the call.

To play the audio files, you may need to operate your phone. If so, follow the phone maker’s operating instructions.

The pause function may not be available on some phones.

If any audio device is connected to the auxiliary input jack, you may need to press the AUX button repeatedly to select the Bluetooth® Audio system.

Switching to another mode pauses the music playing from your phone.
### Audio Error Messages

#### CD Player

If a disc error occurs, you may see the following error messages.

<table>
<thead>
<tr>
<th>Error Message</th>
<th>Cause</th>
<th>Solution</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>HEAT ERROR</strong></td>
<td>High temperature</td>
<td>• Turn the audio system off and allow the player to cool down until the error message is cleared.</td>
</tr>
<tr>
<td><strong>UNSUPPORTED</strong></td>
<td>Track/file format not supported</td>
<td>• Current track/file will be skipped. The next supported track/file plays automatically.</td>
</tr>
</tbody>
</table>
| **BAD DISC**                  | Mechanical error       | • Press the \( \) (eject) button and remove the disc, and check that the error message is cleared.  
                              | CHECK DISK LOAD          | • Check that the disc is not damaged or deformed, and insert the disc again.  
                              | CHECK DISK LOAD          |   **Protecting CDs P. 163** |
| **BAD DISC**                  | Servo error            | • If the error message reappears, press the \( \) button, and pull out the disc.  
                              | CHECK DISK LOAD          | • Insert a different disc.  
                              | CHECK DISK LOAD          |   If the new disc plays, there is a problem with the first disc.  
                              | CHECK DISK LOAD          |   • If the error message repeats, or the disc cannot be removed, contact your dealer.  
                              | CHECK DISK LOAD          |   Do not try to force the disc out of the player.  
| **CHECK DISC**                | Disc error             | • Check that the disc is not damaged or deformed.  
                              | CHECK DISK LOAD          |   **Protecting CDs P. 163** |
## iPod®/USB Flash Drive

If an error occurs while playing an iPod® or USB flash drive, you may see the following error messages. If you cannot clear the error message, contact a dealer.

<table>
<thead>
<tr>
<th>Error Message</th>
<th>Solution</th>
</tr>
</thead>
<tbody>
<tr>
<td>USB ERROR</td>
<td>There is a problem with the USB adapter unit.</td>
</tr>
<tr>
<td>BAD USB DEVICE PLEASE CHECK OWNERS MANUAL</td>
<td>An incompatible device is connected. Disconnect the device. Then turn the audio system off, and turn it on again. Do not reconnect the device that caused the error.</td>
</tr>
<tr>
<td>iPod NO SONG</td>
<td>Appears when the iPod® is empty.</td>
</tr>
<tr>
<td>UNSUPPORTED VER.</td>
<td>Appears when an unsupported iPod® is connected. If it appears when a supported iPod® is connected, update the iPod® software to the newer version.</td>
</tr>
<tr>
<td>CONNECT RETRY</td>
<td>Appears when the system does not acknowledge the iPod®. Reconnect the iPod®.</td>
</tr>
<tr>
<td>UNPLAYABLE FILE</td>
<td>Appears when the files in the USB flash drive are DRM or an unsupported format. This error message appears for about 3 seconds, then plays the next song.</td>
</tr>
<tr>
<td>USB NO SONG</td>
<td>Appears when the USB flash drive is empty or there are no MP3, WMA, or AAC files in the USB flash drive.</td>
</tr>
<tr>
<td>UNSUPPORTED</td>
<td>Appears when an unsupported device is connected. If it appears when the supported device is connected, reconnect the device.</td>
</tr>
</tbody>
</table>
Audio Remote Controls

Allows you to operate the audio system while driving.

MODE Button
Cycles through the audio modes as follows:
FM1→FM2→AM→XM1→XM2→CD→AUX

VOL Button
Press ▲: Increases the volume
Press ▼: Decreases the volume

CH Button
• When listening to radio
  Press +: Selects the next preset radio station.
  Press -: Selects the previous preset radio station.

• When listening to a CD, USB flash drive or iPod®, or Bluetooth® audio
  Press +: Skips to the next song.
  Press -: Goes back to the beginning of the current or previous song.

The CD mode appears only when a CD is loaded.

When in the AUX mode, the following are operable from the remote controls:
• iPod®/USB flash drive connected to the USB adapter cable
• Bluetooth® audio (with some phones only)
General Information on the Audio System

XM® Radio Service

■ Subscribing to XM® Radio

1. You need your radio ID ready before registering for subscription.
   To see the ID in the display: Turn the selector knob until 0 appears.

2. Have your radio ID and credit card number ready, and either call or visit the XM® website to subscribe.

■ Receiving XM® Radio

Press the \([\text{XM}]\) button and stay in this mode for about 30 minutes until the service is activated. Make sure your vehicle is in an open area with good reception.

■ XM® Radio Display Messages

LOADING: XM® is loading the audio or program information.

OFF AIR: The channel is not currently broadcasting.

UPDATING: The encryption code is being updated. Channels 0 and 1 still work normally.

NO SIGNAL: The signal is too weak in the current location.

--------: No such channel exists, the channel is not part of your subscription, or the artist or title information is unavailable.

ANTENNA: There is a problem with the XM® antenna. Contact a dealer.

Contact Information for XM® Radio:
US: XM® Radio at www.siriusxm.com or 1-800-852-9696
Canada: XM® Canada at www.xmradio.ca, 1-877-209-0079

The XM® satellites are in orbit over the equator; therefore, objects south of the vehicle may cause satellite reception interruptions. Satellite signals are more likely to be blocked by tall buildings and mountains the farther north you travel from the equator.

You may experience reception problems under the following circumstances:

- In a location with an obstruction to the south of your vehicle.
- In tunnels
- On the lower level of a multi-tiered road
- Large items carried on the roof rack
Recommended CDs

- Use only high-quality CD-R or CD-RW discs labeled for audio use.
- Use only CD-R or CD-RW discs on which the recordings are closed.
- Play only standard round shaped CDs.

The CD packages or jackets should have one of these marks.

CDs with MP3, WMA or AAC files

- Some software files may not allow for audio play or text data display.
- Some versions of MP3, WMA, or AAC formats may be unsupported.
Protecting CDs

Follow these precautions when handling or storing CDs:

- Store a CD in its case when it is not being played.
- When wiping a CD, use a soft clean cloth from the center to the outside edge.
- Handle a CD by its edge. Never touch either surface.
- Never insert foreign objects into the CD player.
- Keep CDs out of direct sunlight and extreme heat.
- Do not place stabilizer rings or labels on the CD.
- Avoid fingerprints, liquids, and felt-tip pens on the CD.

NOTICE

Do not insert a damaged CD. It may be stuck inside and damage the audio unit.

Examples:

- **Damaged CDs**
  - Chipped/Cracked
  - Warped Burrs

- **Poor quality CDs**
  - Poorly printed

- **Small CDs**
  - 3-inch (8-cm) CD
Compatible iPod® and USB Flash Drives

- iPod® Model Compatibility

<table>
<thead>
<tr>

<tr>
<td>iPod nano® (launched in 2011)</td>
</tr>
</tbody>
</table>

- USB Flash Drives

- Use a recommended USB flash drive of 256 MB or higher.
- Some digital audio players may not be compatible.
- Some USB flash drives (e.g., a device with security lockout) may not work.
- Some software files may not allow for audio play or text data display.
- Some versions of MP3, WMA, or AAC formats may be unsupported.

- iPod® Model Compatibility

This system may not work with all software versions of these devices.

- USB Flash Drives

Files on the USB flash drive are played in their stored order. This order may be different from the order displayed on your PC or device.
The HomeLink® Universal Transceiver can be programmed to operate up to three remote controlled devices around your home, such as garage doors, lighting, or home security systems.

**Important Safety Precautions**

Refer to the safety information that comes with your garage door opener to test that the safety features are functioning properly. If you do not have the safety information, contact the manufacturer.

Before programming HomeLink, make sure that people and objects are out of the way of the garage or gate to prevent potential injury or damage.

When programming a garage door opener, park just outside the garage door's path.

**Training HomeLink**

If you have not trained any of the buttons in HomeLink before, you should erase any previously learned codes. To do this:

- Press and hold the two outside buttons for about 20 seconds, until the red indicator blinks. Release the buttons, and proceed to step 1.
- If you are training the second or third button, go directly to step 1.

---

Continued
Training a Button

1. Position the remote transmitter you wish to link 1 to 3 inches (3-8 cm) from the HomeLink button you want to program.

2. Press and hold the desired HomeLink button and the button on the remote transmitter. Does the HomeLink indicator (LED) blink after 10 secs?

   - **YES**
   - **NO**

3. Press and hold the programmed HomeLink button for about a sec. Does the device (garage door opener) work?

   - **YES**
   - **NO**

4. Press and hold the HomeLink button again.

   - **HomeLink LED is on.**
   - **HomeLink indicator blinks for 2 secs, then remains on.**

5. Press and hold the HomeLink button again. The remote-controlled device should operate.

   - **Training Complete**

Training HomeLink

Retraining a Button

If you want to retrain a programmed button for a new device, you do not have to erase all button memory. You can replace the existing memory code using this procedure:

1. Press and hold the desired HomeLink button until the HomeLink indicator begins to blink.

   - **Standard transmitter**
     - Indicator remains on for about 25 secs.
   - **Rolling code transmitter**
     - Indicator blinks rapidly for two secs, then remains on for about 23 secs.

2. Continue to hold the HomeLink button and follow steps 1 - 3 under “Training a Button.”

Erasing Codes

To erase all the codes, press and hold the two outside buttons until the HomeLink indicator begins to blink (about 10 to 20 secs). You should erase all codes before selling the vehicle.

If you have any problems, see the device’s instructions, visit www.homelink.com, or call HomeLink at 1-800-355-3515.
Bluetooth® HandsFreeLink®

Models with navigation system
For models with the navigation system, see the Navigation System Manual for how to operate Bluetooth® HandsFreeLink®.

Models without navigation system
Bluetooth® HandsFreeLink® (HFL) allows you to place and receive phone calls using your vehicle’s audio system, without handling your cell phone.

Using HFL

HFL Buttons

- **(HFL Talk) Button:** Press to give a command or answer a call.
- **(HFL Back) Button:** Press to end a call, go back to the previous command, or cancel a command.

To use HFL, you need a Bluetooth-compatible cell phone. For a list of compatible phones, pairing procedures, and special feature capabilities:
- **U.S.:** Visit [www.acura.com/handsfreelink](http://www.acura.com/handsfreelink), or call 1-888-528-7876.
- **Canada:** Visit [www.handsfreelink.ca](http://www.handsfreelink.ca), or call 1-888-528-7876.

Voice control tips:
- **Aim the vents away from the ceiling and close the windows, as noise coming from them may interfere with the microphone.**
- **Press and release the button before giving a command. Speak clearly and naturally after a beep.**
- **If the microphone picks up voices other than yours, the command may be misinterpreted.**
- **A command that consists of several words can be spoken together. For example, say “Call 123-456-7890” at once.**
- **When HFL is in use, navigation voice commands cannot be recognized.**
- **To change the volume level, use the audio system’s volume knob or the remote audio controls.**

State or local laws may limit the circumstances in which you can launch or control your attached audio device.

Continued
Help Features

- To hear general HFL information and help, say “Tutorial.”
- Say “Hands free help” or “Help” any time to get help or hear a list of commands.

Information Display

The multi-information display notifies you when there is an incoming call.

Bluetooth® Wireless Technology

The Bluetooth® word mark and logos are registered trademarks owned by Bluetooth SIG, Inc., and any use of such marks by Honda Motors Co., Ltd., is under license. Other trademarks and trade names are those of their respective owners.

HFL Limitations

An incoming call on HFL will interrupt Bluetooth® Audio when it is playing. Audio will resume when the call is ended.
HFL Menus

The ignition switch must be in ACCESSORY or ON to use HFL.

To use HFL, you must first pair your Bluetooth-compatible cell phone to the system while the vehicle is parked.

Press the (HFL Talk) button each time you give a command:

- "Phone setup": Pair a phone to the system.
- "Edit": Edit the name of a paired phone.
- "Delete": Delete a paired phone from the system.
- "List": Hear a list of all phones paired to the system.
- "Status": Hear which paired phone is linked, and its remaining battery life.
- "Next phone": Search for another phone that has been paired.
- "Set pairing code": Set the pairing code to either "Fixed" or "Random.".
- "Call" / "Dial": Say a phone number.
  - e.g.: "123-456-####"
- "Send": Send numbers or names during a call.

- "Redial": Redial the last number called.
- "Transfer": Transfer a call from HFL to your phone or from your phone to HFL.
- "Mute": Mute your voice to the person at the other end of the call.
- "Send": Send numbers or names during a call.
Bluetooth® HandsFreeLink® HFL Menus

**Features**

- **Phonebook**
  - *Store*
    - Store a phonebook entry.
  - *Edit*
    - Edit the number of an existing phonebook entry.
  - *Delete*
    - Delete a phonebook entry.
  - *Receive contact*
    - Transfer contacts from your phone to HFL.
  - *List*
    - Hear a list of all stored phonebook entries.

- **System setup**
  - *Security*
    - Apply a security passcode to the system that must be input at each key cycle to access the system.
  - *Change passcode*
    - Change your security passcode.
  - *Call notification*
    - Set how you want to be notified of an incoming call.
  - *Auto transfer*
    - Set to automatically transfer calls from your phone to HFL when you enter the vehicle.
  - *Clear*
    - Clear the system of all paired phones, phonebook entries, and security passcode.

- **Change language**
  - Switch the system language between English and French.

- **Tutorial**
  - Hear a tutorial for general rules on using the system.

- **Hands-free help**
  - Hear a list of available commands and additional information describing each command.

*Not available on all models*
Phone Setup

To pair a cell phone
1. If no phone has been paired to the system before, HFL gives you information about how to pair the first phone.
   If a phone has already been paired: say “Phone Setup” and “Pair” after the HFL prompts.
2. Follow the HFL prompts and put your phone in discovery or search mode.
   HFL gives you a four-digit code and begins searching for your phone.
3. When your phone finds a Bluetooth® device, select HFL from the options and enter the four-digit code.
4. Follow the HFL prompts and name the newly paired phone.

To rename a paired phone
1. Say “Phone Setup.”
2. Say “Edit” after the prompts.
3. Follow the HFL prompts and rename the phone.
   If there is more than one phone paired to the system, HFL will ask you which phone’s name you want to change.

To delete a paired phone
1. Say “Phone Setup.”
2. Say “Delete” after the prompts.
3. Follow the HFL prompts.
   HFL will ask you which phone you want to delete.

Phone Pairing Tips:
- You cannot pair your phone while the vehicle is moving.
- Your phone must be in the discovery or search mode when pairing the phone. Refer to your phone’s manual.
- Up to six phones can be paired.
- Your phone’s battery may drain faster when it is paired to HFL.
- If your phone is not ready for pairing or not found by the system within three minutes, the system will time out and returns to idle.
To hear the name of all paired phones
1. Say “Phone Setup.”
2. Say “List” after the prompts.
3. HFL reads out all the paired phones’ names.

To hear which paired phone is currently linked
1. Say “Phone Setup.”
2. Say “Status” after the prompts.
3. HFL will tell you which phone is linked with the system.

To change the currently linked phone
1. Say “Phone Setup.”
2. Say “Next Phone” after the prompts.
3. HFL disconnects the current phone, and searches for another paired phone.
4. Once another phone is found, it is connected to the system. HFL will inform you which phone is now linked.

To change the pairing code setting
1. Say “Phone Setup.”
2. Say “Set Pairing Code” after the prompts.
3. If you want HFL to create a random code each time you pair a phone, say “Random.” If you want to create your own four-digit code, say “Fixed.”
4. Follow the HFL prompts.
You can make calls using any phone number or a name in the HFL phonebook, and redial the last number called.

- **Direct dialing a phone number**
  1. Say “Call” or “Dial.”
  2. Say the number you want to dial after the prompts.
  3. Say “Call” or “Dial” after the prompts.

- **From the HFL phonebook**
  1. Say “Call” or “Dial.”
  2. Say the name stored in the HFL phonebook after the prompts.
  3. Follow the HFL prompts.

- **To redial the last number called by HFL**
  Say “Redial.”

- **To end a call**
  Press the (HFL back) button.

Press the button and wait for a beep before giving a command.

HFL uses a Class 2 Bluetooth, with has a maximum range of about 30 feet (10 meters).

HFL allows you to talk up to 30 minutes after you remove the key from the ignition switch. However, this may weaken the vehicle’s battery.
**Bluetooth® HandsFreeLink® HFL Menus**

### Receiving a Call
Press the \[\text{Answer}^1\] button to answer the call, or the \[\text{End}^1\] button to hang up. When there is an incoming call, a call notification (if activated) sounds and a message appears on the display.

### Transferring a Call
You can transfer a call from HFL to your phone, or from your phone to HFL. Press the \[\text{HFL Menus}^1\] button and say “Transfer.”

### Muting a Call
To mute or unmute your voice during a call, press and release the \[\text{Mute}^1\] button and say “Mute.”

### Sending Numbers or Names During a Call
You can send numbers and names during a call. This is useful when calling a menu-driven phone system.

1. **To send a number or name during a call**
   1. Say “Send.”
   2. Say the number or name you want to send after the prompts.
   3. Follow the HFL prompts.

### Receiving a Call
- **Call Waiting**
  Press the \[\text{Answer}^1\] button and put the original call on hold to answer the incoming call.

- **Press the \[\text{End}^1\] button again to return to the original call.**

- **Ignore the incoming call if you do not want to answer it.**

- **Press the \[\text{Mute}^1\] button if you want to hang up the original and answer the incoming call.**

### Sending Numbers or Names During a Call
Press the \[\text{Send}^1\] button before a command.

- **To send a \#, say “Pound.” To send a *, say “Star.”**
HFL Phonebook

You can store up to 50 names with their associated numbers in HFL. The numbers you store can be account numbers or passwords. These numbers can be sent to an automated phone system.

■ To store a phonebook entry
1. Say “Phonebook.”
2. Say “Store” after the prompts.
3. Say a name you want to list as your phonebook entry.
4. Say the number you want to store for the name entry.
5. Follow the HFL prompts and say “Enter” to store the entry.

■ To edit the number stored for a name
1. Say “Phonebook.”
2. Say “Edit” after the prompts.
3. Say a name you want to edit. When asked, say the new number for that name.
4. Follow the HFL prompts and say “Enter” to store the entry.

Avoid using duplicate name entries.
Avoid using “home” as a name entry.
It is easier for HFL to recognize a multisyllabic or longer name. For example, use “Peter” instead of “Pete,” or “John Smith” instead of “John.”
To delete a name
1. Say “Phonebook.”
2. Say “Delete” after the prompts.
3. Say a name you want to delete.
4. Say “Yes,” and follow the HFL prompts.

To list all names in the phonebook
1. Say “Phonebook.”
2. Say “List” after the prompts.
3. HFL begins reading the names in the order they were stored.
4. When you hear a name you want to call, say “Call.”

To store a specific phone number from your cell phone directly to the HFL phonebook *
1. Say “Phonebook.”
2. Say “Receive Contact” after the prompts.
3. Follow the HFL prompts, select a number from your cell phone, and send it to HFL.
   ▶ If it is not the number you want to store, say “Discard.”
4. Say the name for that number.
5. Follow the HFL prompts to continue.

* Not available on all models
**System Setup**

This command group allows you to change or customize HFL basic settings.

- **To set a four-digit passcode to lock the HFL system for security**
  1. Say “System Setup.”
  2. Say “Security.”
  3. Follow the HFL prompts and say the four-digit number of your choice.
  4. Follow the HFL prompts and confirm the number.

- **To change the security passcode**
  1. Say “System Setup.”
  2. Say “Change Passcode” after the prompts.
  3. Say the new four-digit passcode after the HFL prompts.
  4. Follow the HFL prompts.

- **To select a ring tone or a prompt as the incoming call notification**
  1. Say “System Setup.”
  2. Say “Call Notification” after the prompts.
  3. Say “Ring Tone” or “Prompt” after the prompts. For no audible notification, say “Off.”

- **System Setup**

  Press the button before a command.

  Once a passcode is set, you are required to enter the passcode with every new key cycle to use HFL. If you forget the code, go to your dealer to have the passcode reset. You can also cancel the passcode by clearing all the data stored in the HFL system.

  **To clear the system** P. 178

  The default setting of the incoming notification is a ring tone.
■ To activate or deactivate the auto transfer function
The call on your cell phone can be automatically transferred to HFL when you get
into the vehicle and turn on the ignition.
  1. Say “System Setup.”
  2. Say “Auto Transfer” after the prompts. HFL lets you know the current status.
  3. Follow the HFL prompts to change the setting.

■ To clear the system
Paired phones, all stored or imported phonebook data, and any passcodes
are erased.
  1. Say “System Setup.”
  2. Say “Clear” after the prompts.
  3. Follow the HFL prompts.

■ Change Language*
You can set the system language to French or English.
  1. Say “Change Language.”
  2. Follow the HFL prompts.
  
If you have not named your paired phone in the selected language, HFL will ask you
to name it in that language.

* Not available on all models
When you turn the ignition switch to ON, the compass self-calibrates, and the compass display appears.

**Compass Calibration**

If the compass indicates the wrong direction, or the CAL indicator blinks, you need to manually calibrate the system.

1. Turn the ignition switch to ON.
2. Press and hold the **MENU** button until the display shows the compass setting menu list.
3. Rotate to select **CALIBRATION**, then press .
4. When the display changes to **PUSH CAL START**, press .
5. Drive the vehicle slowly in two circles.
   - The compass starts to show a direction after the calibration. The CAL indicator goes off.

Compass operation can be affected under the following conditions:
- Driving near power lines or stations
- Crossing a bridge
- Passing a large vehicle, or driving near a large object that can cause a magnetic disturbance
- When accessories such as antennas and roof racks are mounted by magnets

Calibrate the compass in an open area.

While setting the compass:
- The **RETURN** button returns to the previous screen.
- The **MENU** button cancels the setting mode.

* Not available on all models
Compass Zone Selection

1. Turn the ignition switch to ON [II].
2. Press and hold the MENU button until the display shows the compass setting menu list.
3. Rotate \( \alpha \) to select ZONE, then press \( \beta \). The display shows the current zone number.
4. Rotate \( \alpha \) to select the zone number of your area (See Zone Map), then press \( \beta \).

Zone Map

Guam Island: Zone 8
Puerto Rico: Zone 11

The zone selection is done to compensate the variation between magnetic north and true north.

If the calibration starts while the audio system is in use, the display returns to normal after the calibration is completed.

Driving Preparation

Check the following items before you start driving.

**Exterior Checks**

- Make sure there are no obstructions on the windows, door mirrors, exterior lights, or other parts of the vehicle.
  - Remove any frost, snow, or ice.
  - Remove any snow on the roof, as this can slip down and obstruct your field of vision while driving. If frozen solid, remove ice once it has softened.
  - When removing ice from around the wheels, be sure not to damage the wheel or wheel components.

- Make sure the hood is securely closed.
  - If the hood opens while driving, your front view will be blocked.

- Make sure the tires are in good condition.
  - Check air pressure, check for damage and excessive wear.
  - **Checking and Maintaining Tires** P. 259

- Make sure there are no people or objects behind or around the vehicle.
  - There are blind spots from the inside.

**NOTICE**

When doors are frozen shut, use warm water around the door edges to melt any ice. Do not try to force them open, as this can damage the rubber trim around the doors. When done, wipe dry to avoid further freezing.

Do not pour warm water into the key cylinder. You will be unable to insert key if the water freezes in the hole.

Heat from the engine and exhaust can ignite flammable materials left under the hood, causing a fire. If you’ve parked your vehicle for an extended period, inspect and remove any debris that may have collected, such as dried grass and leaves that have fallen or have been carried in for use as a nest by a small animal. Also check under the hood for leftover flammable materials after you or someone else has performed maintenance on your vehicle.
Continued

Before Driving

Driving Preparation

• Store or secure all items on board properly.
  ► Carrying too much cargo, or improperly storing it, can affect your vehicle’s handling, stability, stopping distance, and tires, and make it unsafe.
  
  Maximum Load Limit P. 185

• Do not pile items higher than the seat height.
  ► They can block your view and may be thrown forward in the event of sudden braking.

• Do not place anything in the front seat footwells. Make sure to secure the floor mat.
  ► An object or unsecured floor mat can interfere with your brake and accelerator pedal operation while driving.

• If you have any animals on board, do not let them move around in the vehicle.
  ► They may interfere with driving and a crash could occur.

• Securely close and lock all doors and the trunk.
  
  Locking/Unlocking the Doors from the Inside P. 93

• Adjust your seating position properly.
  ► Adjust the head restraint, too.
  
  Adjusting the Seats P. 116
  Adjusting the Head Restraints P. 118

• Adjust the mirrors and steering wheel properly for your driving.
  ► Adjust them while sitting in the proper driving position.
  
  Adjusting the Mirror P. 114
  Adjusting the Steering Wheel P. 113

Interior Checks

The headlight aim is set by the factory, and does not need to be adjusted. However, if you regularly carry heavy items in the trunk or tow a trailer, have the aiming readjusted at a dealer or by a qualified technician.
Before Driving
Driving Preparation

- Be sure items placed on the floor behind the front seats cannot roll under the seats.
  - They can interfere with the driver’s ability to operate the pedals, the operation of the seats, or the operation of the sensors under the seats.

- Everyone in the vehicle must fasten their seat belt.
  - Fastening a Seat Belt P. 29

- Make sure that the indicators in the instrument panel come on when you start the vehicle, and go off soon after.
  - Always have a dealer check the vehicle if a problem is indicated.
  - Indicators P. 64
Maximum Load Limit

The maximum load for your vehicle is 850 lbs (385 kg).

See Tire and Loading Information label attached to the driver’s doorramb.

This figure includes the total weight of all occupants, cargo, and accessories, and the tongue load if you are towing a trailer.

Steps for Determining Correct Load Limit -

(1) Locate the statement “The combined weight of occupants and cargo should never exceed XXX kg or XXX lbs.” on your vehicle’s placard.

(2) Determine the combined weight of the driver and passengers that will be riding in your vehicle.

(3) Subtract the combined weight of the driver and passengers from XXX kg or XXX lbs.

(4) The resulting figure equals the available amount of cargo and luggage load capacity. For example, if the “XXX” amount equals 1,4000 lbs. and there will be five 150 lb. passengers in your vehicle, the amount of available cargo and luggage load capacity is 650 lbs. 

(1,400 - 750 (5 x 150) = 650 lbs.)

WARNING

Overloading or improper loading can affect handling and stability and cause a crash in which you can be hurt or killed.

Follow all load limits and other loading guidelines in this manual.

Gross Vehicle Weight Rating (GVWR):
The maximum allowable weight of the vehicle, all occupants, all accessories, all cargo, and the tongue load.

Specifications P. 304
P. 306

Gross Axle Weight Rating (GAWR):
The maximum allowable weight of the vehicle axle.

Specifications P. 304
P. 306
Before Driving

Maximum Load Limit

(5) Determine the combined weight of luggage and cargo being loaded on the vehicle. That weight may not safely exceed the available cargo and luggage load capacity calculated in step 4.

(6) If your vehicle will be towing a trailer, load from your trailer will be transferred to your vehicle. Consult this manual to determine how this reduces the available cargo and luggage load capacity of your vehicle.

In addition, the total weight of the vehicle, all occupants, accessories, cargo, and trailer tongue load must not exceed the Gross Vehicle Weight Rating (GVWR) or the Gross Axle Weight Rating (GAWR). Both are on a label on the driver’s doorjamb.

Load Limits Example

Example 1

Max Load
850 lbs (385 kg)

Passenger Weight
150 lbs x 2 = 300 lbs
(68 kg x 2 = 136 kg)

Cargo Weight
550 lbs (249 kg)

Example 2

Max Load
850 lbs (385 kg)

Passenger Weight
150 lbs x 5 = 750 lbs
(68 kg x 5 = 340 kg)

Cargo Weight
100 lbs (45 kg)
Towing Preparation

■ Towing Load Limits

Your vehicle can tow a trailer if you carefully observe the load limits, use the proper equipment, and follow the towing guidelines. Check the load limits before driving.

■ Total trailer weight

Maximum allowable weight of the trailer, cargo, and everything in or on it must not exceed 1,000 lbs (450 kg). Towing loads in excess of this can seriously affect vehicle handling and performance and can damage the engine and drivetrain.

■ Tongue load

The weight of the tongue with a fully loaded trailer on the hitch should be approximately 10% of the total trailer weight.

- Excessive tongue load reduces front tire traction and steering control. Too little tongue load can make the trailer unstable and cause it to sway.
- To achieve a proper tongue load, start by loading 60% of the load toward the front of the trailer and 40% toward the rear. Readjust the load as needed.

Check if all loads are within limits at a public scale. If a public scale is not available, add the estimated weight of your cargo load to the weight of your trailer (as quoted by the manufacturer), and the tongue load.

Features

■ WARNING

Exceeding any load limit or improperly loading your vehicle and trailer can cause a crash in which you can be seriously hurt or killed.

Check the loading of your vehicle and trailer carefully before starting to drive.

Avoid towing a trailer during your vehicle’s first 600 miles (1,000 km).

Never exceed the gross weight ratings.

Gross weight information

Vehicle Specifications P. 304
P. 306
Towing Equipment and Accessories

Towing equipment varies by the size of your trailer, how much load you are towing, and where you are towing.

■ Hitches
The hitch must be of an approved type and properly bolted to the underbody.

■ Safety chains
Always use safety chains when you tow a trailer. Leave enough slack to allow the trailer to turn corners easily, but do not allow the chains to drag on the ground.

■ Trailer brakes
There are two common types of trailer brakes: surge and electric. Surge brakes are common for boat trailers, since the brakes will get wet. If you choose electric brakes, be sure they are electronically actuated. Do not attempt to attach trailer brakes to your vehicle’s hydraulic system, as it will lower braking effectiveness and create a potential hazard.

■ Additional towing equipment
Many states and provinces/territories require special outside mirrors when towing a trailer. Even if mirrors are not required in your locale, you should install special mirrors if visibility is restricted in any way.

■ Trailer light
Trailer lights and equipment must comply with federal, state, province/territory, and local regulations. Check with your local trailer sales or rental agency for the requirements in the area where you plan to tow.
Driving Safely with a Trailer

Things You Need To Know Before Towing a Trailer

- Have the trailer properly serviced and keep it in good condition.
- Make sure that all the weights and load in the vehicle and trailer are within limits.
  - Towing Load Limits P. 187
- Securely attach the hitch, safety chains, and other necessary parts to the trailer.
- Securely store all the items in and on the trailer so that they do not shift while driving.
- Check if the lights and brakes on the trailer are working properly.
- Check the pressures of the trailer tires, including the spare.

Towing Speeds and Gears

- Drive slower than normal.
- Obey posted speed limits for vehicles with trailers.
  - Automatic transmission models
    - Use the D position when towing a trailer on level roads.

Turning and Braking

- Turn more slowly and with a wider turning arc than normal.
- Allow more time and distance for braking.
- Do not brake or turn suddenly.

Parking
In addition to the normal precautions, place wheel chocks at each of the trailer’s tires.
Driving in Hilly Terrain

- Monitor your temperature gauge. If it nears the red (Hot) mark, turn off the air conditioning and reduce speed. Pull to the side of the road safely to cool down the engine if necessary.

Automatic transmission models
- Shift to the S position if the transmission shifts frequently.

Towing Your Vehicle

Your vehicle is not designed to be towed behind a motor home. If your vehicle needs to be towed in an emergency, refer to the emergency towing information.

Emergency Towing P. 299
When Driving

Starting the Engine

1. Make sure the parking brake is applied.

   ![Automatic transmission models]

   2. Check that the shift lever is in P, then depress the brake pedal.
   - Although it is possible to start the vehicle in N, it is safer to start it in P.

   ![Manual transmission models]

   2. Check that the shift lever is in N. Then depress the brake pedal with your right foot, and the clutch pedal with your left foot.
   - The clutch pedal must be fully depressed to start the engine.

Starting the Engine

Keep your foot firmly on the brake pedal when starting the engine.

The engine is harder to start in cold weather and in thinner air found at altitudes above 8,000 feet (2,400 meters).

When starting the engine in cold weather, turn off all electrical accessories such as the lights, climate control system, and rear defogger in order to reduce battery drain.

If you live in a region where winter is extremely cold, an engine block heater will improve starting and warming of the engine. If temperatures consistently below -22°F (-30°C) are expected, the coolant mixture should be changed to a higher concentration to prevent freezing. Consult a dealer for details.

If exhaust sounds abnormal or you can smell exhaust gas inside the vehicle, have your vehicle checked by a dealer. There may be a problem with the engine or exhaust system.

The immobilizer system protects your vehicle from theft.

If an improperly coded device is used, the engine’s fuel system is disabled.

Immobilizer System P. 98
When Driving

Starting the Engine

1. Turn the ignition switch to START (without depressing the accelerator pedal.

Starting to Drive

Automatic transmission models

1. Keeping your right foot on the brake pedal, release the parking brake. Check that the parking brake indicator has gone off.

   Parking Brake P. 210

2. Put the shift lever in [D]. Select [R] when reversing.

3. Gradually release the brake pedal and gently depress the accelerator pedal to pull away.

Starting the Engine

Do not hold the key in START for more than 15 seconds.

• If the engine does not start right away, wait for at least 10 seconds before trying again.
• If the engine starts, but then immediately stops, wait at least 10 seconds before repeating step 3 while gently depressing the accelerator pedal. Release the accelerator pedal once the engine starts.

The immobilizer system protects your vehicle from theft. If an improperly coded key (or other device) is used, the engine’s fuel system is disabled.

Immobilizer System P. 98
Precautions While Driving

In Rain

Avoid driving in deep water and on flooded roads. This can damage the engine, driveline, or cause electrical component failure.

Other Precautions

If there is a strong impact with something under the vehicle, stop in a safe location. Check the underside of the vehicle for damage or any fluid leaks.

NOTICE

Do not operate the shift lever while pressing the accelerator pedal. You could damage the transmission.

If the ignition switch is turned to ACCESSORY [Ⅰ] or LOCK [Ⅱ] while driving, the engine will shut down and all steering and brake power assist functions will stop, making it difficult to control the vehicle.

Do not put the shift lever in [N], as you will lose engine braking (and acceleration) performance.

During the first 600 miles (1,000 km) of operation, avoid sudden acceleration or full throttle operation so as to not damage the engine or powertrain.

Avoid hard braking for the first 200 miles (300 km). You should also follow this when the brakes are replaced.
When Driving
Automatic Transmission

**Automatic Transmission**

**Creeping**
The following conditions cause the engine to run at high revolutions, and increasing creeping:
- Immediately after the engine starts.
- When the climate control system is in use.

Keep the brake pedal firmly depressed when stopped.

**Kickdown**
Quickly depressing the accelerator pedal while driving uphill may cause the transmission to drop to a lower gear, unexpectedly increasing vehicle speed. Depress the accelerator pedal carefully, especially on slippery roads and curves.
Shifting

Change the shift position in accordance with your driving needs.

■ Shift lever positions

- **P** Park
  - Used when parking or starting the engine

- **R** Reverse
  - Used when reversing

- **N** Neutral
  - Used when idling

- **D** Drive
  - Used:
    - For normal driving (gears change between 1st and 5th automatically)
    - When temporarily driving in the sequential mode

- **S** Drive (S)
  - Used for:
    - Automatically changing gears between 1st and 4th (4th gear is used only at high speed)
    - Driving in the sequential mode

You cannot turn the ignition switch to LOCK [0] and remove the key unless the shift lever is in [P].

The vehicle may move forward very slightly even in [N] while the engine is cold.

Depress the brake pedal firmly and, when necessary, apply the parking brake.

Continued
When you change the shift lever from (D) to (R) and vice versa, come to a complete stop and keep the brake pedal depressed.

Operating the shift lever before the vehicle has come to a complete standstill can damage the transmission.

Use the shift lever position indicator to check the lever position before pulling away.

Whichever position the shift lever is in when driving, a blinking (D) indicator indicates a transmission problem.

Avoid sudden acceleration and have the transmission checked by a dealer as soon as possible.

The fuel supply may be cut off if you drive at engine speeds in or over the tachometer’s red zone (engine speed limit). If this happens, you may experience a slight jolt.

It may not be possible to operate the shift lever if the brake pedal is applied while the shift lever release button is held down.

Depress the brake pedal first.
Sequential Shift Mode

Use the paddle shifters to change between 1st and 5th gears without removing your hands from the steering wheel. The transmission will switch to the sequential shift mode.

When the shift lever is in [D]:
The vehicle will go into the sequential shift mode momentarily, and the gear position indicator will come on.

Once you start traveling at a constant speed, the sequential shift mode will automatically switch off, and the gear position indicator will go off.

Hold the [+ paddle shifter for two seconds to return to normal drive.

When the shift lever is in [S]:
The vehicle will go into the sequential shift mode, and the M (sequential shift) indicator and gear position indicator will come on. At speeds of 6 mph (10 km/h) or less, the vehicle automatically shifts down into 1st gear. It will not automatically shift up, even if vehicle speed increases.

You can only pull away in 1st or 2nd gear.

When switching out of the sequential shift mode, move the shift lever from [S] to [D]. When the sequential shift mode is canceled, the sequential shift mode indicator and shift indicator go off.
When Driving

■ Second gear lock mode
If you pull the + paddle shifter while stopped or driving at 6 mph (10 km/h) or less, the gear position will be locked in 2nd gear. This makes it easier to pull away on slippery surfaces such as snow covered roads.

To cancel the 2nd gear lock mode, pull the - paddle shifter, or move the shift lever from S to D.

■ Sequential Shift Mode Operation
Each paddle shift operation makes a single gear change.

To change gears continuously, release the paddle shifter before pulling it again for the next gear.

Recommended Shift Points
Use this table as a guideline for efficient fuel economy and effective emission control.

<table>
<thead>
<tr>
<th>Shift Up</th>
<th>Normal Acceleration</th>
</tr>
</thead>
<tbody>
<tr>
<td>1st to 2nd</td>
<td>15 mph (24 km/h)</td>
</tr>
<tr>
<td>2nd to 3rd</td>
<td>25 mph (40 km/h)</td>
</tr>
<tr>
<td>3rd to 4th</td>
<td>40 mph (64 km/h)</td>
</tr>
<tr>
<td>4th to 5th</td>
<td>45 mph (72 km/h)</td>
</tr>
</tbody>
</table>

If the gear position indicator blinks when you try to shift up or down, this means your vehicle speed is not in its allowable gear shifting range.

Slightly accelerate to shift up and decelerate to shift down while the indicator is blinking.
Shifting

When Driving

Shift Lever Operation

Fully depress the clutch pedal to operate the shift lever and change gears, then slowly release the pedal.

Depress the clutch pedal, and pause for a few seconds before shifting into R, or shift into one of the forward gears for a moment. This stops the gears so they do not “grind.”

When you are not shifting, do not rest your foot on the clutch pedal. This can cause your clutch to wear out faster.

NOTICE

Do not shift to R before the vehicle comes to a complete stop. Shifting to R before stopping can damage the transmission.

NOTICE

Before downshifting, make sure the engine will not go into the tachometer’s red zone. Should this occur, it can severely damage your engine.

There is a metallic part on the shift lever. If you leave the vehicle parked outside for a long time on a hot day, be careful before moving the shift lever. Because of heat, the shift lever may be extremely hot. If the outside temperature is low, the shift lever may feel cold.

Recommended Shift Points

Driving in the highest gear that allows the engine to run and accelerate smoothly helps to optimize fuel economy and effective emissions control. The following shift points are recommended:

<table>
<thead>
<tr>
<th>Shift Up</th>
<th>Normal Acceleration</th>
</tr>
</thead>
<tbody>
<tr>
<td>1st to 2nd</td>
<td>17 mph (27 km/h)</td>
</tr>
<tr>
<td>2nd to 3rd</td>
<td>29 mph (46 km/h)</td>
</tr>
<tr>
<td>3rd to 4th</td>
<td>37 mph (59 km/h)</td>
</tr>
<tr>
<td>4th to 5th</td>
<td>43 mph (69 km/h)</td>
</tr>
<tr>
<td>5th to 6th</td>
<td>49 mph (79 km/h)</td>
</tr>
</tbody>
</table>

If you exceed the maximum speed for the gear you are in, the engine speed will enter into the tachometer’s red zone. When this happens, you may experience a slight jolt.

Continued
When Driving

Shifting

The manual transmission has a lockout mechanism that stops you from accidentally shifting into (R) from a forward gear while the vehicle is moving at a certain speed.

If you cannot shift to (R) when the vehicle is stopped, do the following:

1. Depress the clutch pedal, move the shift lever all the way to the left, and shift to (R).
2. If you still cannot shift into (R), apply the parking brake, and turn the ignition switch to ACCESSORY 1 or LOCK 0.
3. Depress the clutch pedal and shift into (R).
4. Keep depressing the clutch pedal and start the engine.

Have the vehicle checked by a dealer if you have to go through this procedure repeatedly.
Cruise Control

Maintains a constant vehicle speed without having to keep your foot on the accelerator. Use cruise control on freeways or open roads where you can travel at a constant speed with little acceleration or deceleration.

**When to use**
- **Vehicle speed for cruise control:**
  Desired speed in a range above roughly 25 mph (40 km/h) ~

**Automatic transmission models**
- **Shift positions for cruise control:**
  In [D] or [S], in 2nd gear or higher

Always keep sufficient distance between you and the vehicle in front of you.

**How to use**
- **Press the CRUISE button on the steering wheel.**

**CRUISE MAIN** is on in the instrument panel.
Cruise control is ready to use.

**WARNING**

Improper use of the cruise control can lead to a crash.

Use the cruise control only when traveling on open highways in good weather.

It may not be possible to maintain a constant speed when driving uphill or downhill.
When Driving

### Cruise Control

To Set the Vehicle Speed

Press the **DECEL/SET** button when you reach the desired speed using the accelerator pedal.

The moment you release the **DECEL/SET** button, the set speed is fixed, and cruise control begins. The **CRUISE CONTROL** indicator comes on.

To Cancel

To cancel cruise control, do any of the following:
- Press the **CANCEL** button.
- Press the **CRUISE** button.
- Depress the brake pedal.
- Depress the clutch pedal.

The **CRUISE CONTROL** indicator goes off.

To Set the Vehicle Speed

When not using cruise control: Turn off cruise control by pressing the **CRUISE** button.

To Cancel

Resuming the prior set speed:
After cruise control has been canceled, you can still resume the prior set speed by pressing the **RES/ACCEL** button while driving at a speed of at least 25 mph (40 km/h) or more.

You cannot set or resume in the following situations:
- When vehicle speed is less than 25 mph (40 km/h)
- When the **CRUISE** button is turned off

At vehicle speeds of 22 mph (35 km/h) or less, cruise control is canceled automatically.
When Driving

Cruise Control

Increase or decrease the vehicle speed using the RES/ACCEL or DECEL/SET buttons on the steering wheel.

- Each time you press the button, the vehicle speed is increased or decreased by about 1 mph (1.6 km/h).
- If you keep the button pressed, the vehicle speed increased or decreased by about 10 mph (16 km/h).

To cancel cruise control, do any of the following:
- Press the CANCEL button.
- Press the CRUISE button.
- Depress the brake pedal.
- Depress the clutch pedal for five seconds or more.

The CRUISE CONTROL indicator goes off.

Resuming the prior set speed:
After cruise control has been canceled, you can still resume the prior set speed by pressing the RES/ACCEL button while driving at a speed of at least 25 mph (40 km/h) or more.

You cannot set or resume in the following situations:
- When vehicle speed is less than 25 mph (40 km/h)
- When the CRUISE button is turned off

At vehicle speeds of 22 mph (35 km/h) or less, cruise control is canceled automatically.
When Driving

**VSA® (Vehicle Stability Assist), aka ESC (Electronic Stability Control), System**

VSA® helps to stabilize the vehicle during cornering if the vehicle turns more or less than what was intended. It also assists in maintaining traction on slippery surfaces. It does so by regulating engine output and selectively applying the brakes.

### VSA® Operation

When VSA® activates, you may notice that the engine does not respond to the accelerator. You may also notice some noise from the hydraulic system. You will also see the indicator blink.

The VSA® may not function properly if tire type and size are mixed. Make sure to use the same size and type of tire, and the air pressures as specified.

When the VSA® indicator comes on and stays on while driving, there may be a problem with the system. While this may not interfere with normal driving, have your vehicle checked by a dealer immediately.

VSA® cannot enhance stability in all driving situations and does not control the entire braking system. You still need to drive and corner at speeds appropriate for the conditions and always leave a sufficient margin of safety.

The main function of the VSA® system is generally known as Electronic Stability Control (ESC). The system also includes a traction control function.
When Driving

VSA® (Vehicle Stability Assist), aka ESC (Electronic Stability Control), System

This button is on the driver side control panel. To turn the VSA® system on and off, press and hold it until you hear a beep.

VSA® will stop and the indicator will come on.

To turn it on again, press the VSA® (VSA® OFF) button until you hear a beep.

VSA® is turned on every time you start the engine, even if you turned it off the last time you drove the vehicle.

Without VSA®, your vehicle will have normal braking and cornering ability, but it will not have VSA® traction and stability enhancement.

In certain unusual conditions when your vehicle gets stuck in shallow mud or fresh snow, it may be easier to free it with the VSA® temporarily switched off.

When the VSA® system is off, the traction control system is also off. You should only attempt to free your vehicle with the VSA® off if you are not able to free it when the VSA® is on.

Immediately after freeing your vehicle, be sure to switch VSA® on again. We do not recommend driving your vehicle with the VSA® and traction control systems switched off.

If the low tire pressure/TPMS indicator comes on or blinks, the VSA® system comes on automatically. In this case, you cannot turn the system off by pressing the VSA® button.

You may hear a motor sound coming from the engine compartment while system checks are being performed immediately after starting the engine or while driving. This is normal.
TPMS (Tire Pressure Monitoring System)

Monitors the tire pressure while you are driving. If your vehicle’s tire pressure becomes significantly low, the low tire pressure/TPMS indicator comes on and a message appears on the multi-information display.

To select the tire pressure monitor, turn the ignition switch to ON [Ⅱ] and press the ▲/[▼] (information) button until you see the tire pressure screen.

If all the tire pressures are normal, TIRE PRESSURE OK will be displayed.

To display the pressure of all four tires, press the SEL/RESET button.

The pressure for each tire is displayed in PSI (U.S.) or kPa (Canada).
When Driving

TPMS (Tire Pressure Monitoring System)

If any tire has low pressure, **LOW TIRE PRESSURE** is displayed on the multi-information display. Check the pressure of each tire by pressing the **SEL/RESET** button.

**CHECK TIRE PRESSURE** is displayed when a tire has significantly low pressure. The specific tire is displayed on the screen.

TPMS (Tire Pressure Monitoring System)

- Tire pressure checked and inflated in:
  - Warm weather can become under-inflated in colder weather.
  - Cold weather can become over-inflated in warmer weather.

The low tire pressure/TPMS indicator will not come on as a result of over inflation.
Tire Pressure Monitoring System (TPMS) - Required Federal Explanation

Each tire, including the spare (if provided), should be checked monthly when cold and inflated to the inflation pressure recommended by the vehicle manufacturer on the vehicle placard or tire inflation pressure label.

(If your vehicle has tires of a different size than the size indicated on the vehicle placard or tire inflation pressure label, you should determine the proper tire inflation pressure for those tires.)

As an added safety feature, your vehicle has been equipped with a tire pressure monitoring system (TPMS) that illuminates a low tire pressure telltale when one or more of your tires is significantly under-inflated.

Accordingly, when the low tire pressure telltale illuminates, you should stop and check your tires as soon as possible, and inflate them to the proper pressure.

Driving on a significantly under-inflated tire causes the tire to overheat and can lead to tire failure. Under-inflation also reduces fuel efficiency and tire tread life, and may affect the vehicle's handling and stopping ability.
Please note that the TPMS is not a substitute for proper tire maintenance, and it is the driver's responsibility to maintain correct tire pressure, even if under-inflation has not reached the level to trigger illumination of the TPMS low tire pressure telltale.

Your vehicle has also been equipped with a TPMS malfunction indicator to indicate when the system is not operating properly. The TPMS malfunction indicator is combined with the low tire pressure telltale. When the system detects a malfunction, the telltale will flash for approximately one minute and then remain continuously illuminated. This sequence will continue upon subsequent vehicle start-ups as long as the malfunction exists.

When the malfunction indicator is illuminated, the system may not be able to detect or signal low tire pressure as intended.

TPMS malfunctions may occur for a variety of reasons, including the installation of replacement or alternate tires or wheels on the vehicle that prevent the TPMS from functioning properly.

Always check the TPMS malfunction telltale after replacing one or more tires or wheels on your vehicle to ensure that the replacement or alternate tires and wheels allow the TPMS to continue to function properly.
Braking

Brake System

Parking Brake

Use the parking brake to keep the vehicle stationary when parking.

To apply:
Pull the lever fully up without pressing the release button.

To release:
1. Pull the lever slightly, and press and hold the release button.
2. Lower the lever down all the way, then release the button.

NOTICE
Release the parking brake fully before driving. The rear brakes and axle can be damaged if you drive with the parking brake applied.

If you start driving without fully releasing the parking brake, a buzzer sounds as a warning, and RELEASE PARKING BRAKE appears on the multi-information display.

Always apply the parking brake when parking.
Your vehicle is equipped with disc brakes at all four wheels. A vacuum power assist helps reduce the effort needed on the brake pedal. The brake assist system increases the stopping force when you depress the brake pedal hard in an emergency situation. The anti-lock brake system (ABS) helps you retain steering control when braking very hard.

Foot Brake

Check the brakes after driving through deep water, or if there is a buildup of road surface water. If necessary, dry the brakes by lightly depressing the pedal several times.

If you hear a continuous metallic friction sound when applying the brakes, the brake pads need to be replaced. Have the vehicle checked by a dealer.

Constantly using the brake pedal while going down a long hill builds up heat, which reduces the brake effectiveness. Apply engine braking by taking your foot off the accelerator pedal and downshifting to a lower gear. With manual transmission use a lower gear for greater engine braking.

Do not rest your foot on the brake pedal while driving, as it will lightly apply the brakes and cause them to lose effectiveness over time and reduce pad life. It will also confuse drivers behind you.
Braking

ABS (Anti-lock Brake System)

ABS (Anti-lock Brake System)

ABS

Helps prevent the wheels from locking up, and helps you retain steering control by pumping the brakes rapidly, much faster than you.

The electronic brake distribution (EBD) system, which is part of the ABS, also balances the front-to-rear braking distribution according to vehicle loading.

You should never pump the brake pedal. Let the ABS work for you by always keeping firm, steady pressure on the brake pedal. This is sometimes referred to as “stomp and steer.”

ABS operation

The brake pedal may pulsate slightly when the ABS is working. Keep holding the pedal firmly down. On dry pavement, you will need to press on the brake pedal very hard before the ABS activates. However, you may feel the ABS activate immediately if you are trying to stop on snow or ice.

When the vehicle speed goes under 6 mph (10 km/h), the ABS stops.

NOTICE

The ABS may not function correctly if you use an incorrect tire type and size.

When the ABS indicator comes on while driving, there may be a problem with the system. While normal braking is not affected, there is a possibility of the ABS not operating. Have the vehicle checked by a dealer immediately.

The ABS does not reduce the time or distance it takes to stop the vehicle. It only helps with steering control during hard braking.

In the following cases, your vehicle may need more stopping distance than a vehicle without the ABS:

- When driving on rough road surfaces, including when driving on uneven surfaces, such as gravel or snow.
- When tire chains are installed.

You may hear a motor sound coming from the engine compartment while system checks are being performed immediately after starting the engine or while driving. This is normal.
Brake Assist System

■ Brake Assist System
Designed to assist the driver by generating greater braking force when you depress the brake pedal hard during emergency braking.

■ Brake assist system operation
Press the brake pedal firmly for more powerful braking.

When brake assist operates, the pedal may wiggle slightly and an operating noise may be heard. This is normal. Keep holding the brake pedal firmly down.
Driving

Parking Your Vehicle

When Stopped

1. Depress the brake pedal firmly.
2. Firmly apply the parking brake.

**Automatic transmission models**
3. Move the shift lever from **D** to **P**.

**Manual transmission models**
3. Move the shift lever to **R**.
4. Turn off the engine.

Always set the parking brake firmly, in particular if you are parked on an incline.

NOTICE

The following can damage the transmission:
- Depressing the accelerator and brake pedals simultaneously.
- Holding the vehicle in place when facing uphill by depressing the accelerator pedal.
- Moving the shift lever into **P** before the vehicle stops completely.

Raise the wiper arms when snow is expected.

Park your vehicle near flammable objects, such as dry grass, oil, or timber. Heat from the exhaust can cause a fire.
Refueling

Fuel Information

■ Fuel recommendation

Unleaded premium gasoline, pump octane number 91 or higher

4-cylinder models
Use of lower octane gasoline can cause occasional metallic knocking noise in the engine and will result in decreased engine performance.

Use of gasoline with a pump octane less than 87 can lead to engine damage.

6-cylinder models
Your vehicle is designed to operate on premium unleaded gasoline with a pump octane of 91 or higher.

If this octane grade is unavailable, regular unleaded gasoline with a pump octane of 87 or higher may be used temporarily.

The use of regular unleaded gasoline can cause metallic knocking noises in the engine and will result in decreased engine performance. The long-term use of regular-grade gasoline can lead to engine damage.

■ Top tier detergent gasoline

Because the level of detergency and additives in gasoline vary in the market, Acura endorses the use of “TOP TIER Detergent Gasoline” where available to help maintain the performance and reliability of your vehicle. TOP TIER Detergent Gasoline meets a new gasoline standard jointly established by leading automotive manufacturers to meet the needs of today’s advanced engines.

Qualifying gasoline retailers will, in most cases, identify their gasoline as having met “TOP TIER Detergent Gasoline” standards at the retail location. This fuel is guaranteed to contain the proper level of detergent additives and be free of metallic additives. The proper level of detergent additives, and absence of harmful metallic additives in gasoline, help avoid build-up of deposits in your engine and emission control system.

NOTICE

We recommend quality gasoline containing detergent additives that help prevent fuel system and engine deposits. In addition, in order to maintain good performance, fuel economy, and emissions control, we strongly recommend, the use of gasoline that does NOT contain harmful manganese-based fuel additives such as MMT, if such gasoline is available.

Use of gasoline with these additives may adversely affect performance, and cause the malfunction indicator lamp on your instrument panel to come on. If this happens, contact a dealer for service.

Continued
Refueling

For further important fuel-related information for your vehicle, or on information on gasoline that does not contain MMT, visit My Acura at owners.acura.com In Canada, visit www.acura.ca for additional information on gasoline. For more information on top tier gasoline, visit www.toptiergas.com.

Gasoline containing ethanol
Some gasoline today is blended with oxygenates such as ethanol. Your vehicle is designed to operate on oxygenated gasoline containing up to 10% ethanol by volume. Do not use gasoline containing methanol. If you notice any undesirable operating symptoms, try another service station or switch to another brand of gasoline.

Fuel tank capacity: 18.5 US gal (70 liters)

How to Refuel

1. Stop your vehicle with the service station pump on the left side of the vehicle in the rear.
2. Turn off the engine.
3. Unlock the driver’s door using the master door lock switch. The fuel fill door on the outer side of the vehicle will unlock.

WARNING
Gasoline is highly flammable and explosive. You can be burned or seriously injured when handling fuel.

- Stop the engine, and keep heat, sparks, and flame away.
- Handle fuel only outdoors.
- Wipe up spills immediately.

How to Refuel
4. Press the area indicated by the arrow to release the fuel fill door. You will hear a click.

5. Remove the fuel fill cap slowly. If you hear a release of air, wait until this stops, then turn the knob slowly to open the fuel fill cap.

6. Place the fuel fill cap in the holder.

7. Insert the filler nozzle fully.
   - When the tank is full, the fuel nozzle will click off automatically. This leaves space in the fuel tank in case the fuel expands with a change in the temperature.

8. After filling, replace the fuel fill cap, tightening it until you hear it click at least once.
   - Shut the fuel fill door by hand.

How to Refuel

Use the master door lock switch to unlock the fuel fill door.

The vehicle doors and fuel fill door automatically relock if the remote unlock function is used. This can be deactivated by briefly opening then closing the driver’s door.

**NOTICE**
The fuel fill door and its latching mechanism can be permanently damaged if the fuel fill door is forced closed when the driver’s door is locked.

The filler nozzle automatically stops to leave space in the fuel tank so that fuel does not overflow as a result of changes in air temperature.

If the fuel nozzle keeps turning off when the tank is not full, there may be a problem with the pump’s fuel vapor recovery system. Try filling at another pump. If this does not fix the problem, consult a dealer.

Do not continue to add fuel after the nozzle has automatically stopped. Additional fuel can exceed the full tank capacity.
Improving Fuel Economy

Fuel economy depends on several conditions, including driving conditions, your driving habits, the condition of your vehicle, and loading. Depending on these and other conditions, you may or may not achieve the rated fuel economy of this vehicle.

Maintenance and Fuel Economy

You can optimize your fuel economy with proper maintenance of your vehicle. Always maintain your vehicle in accordance with the messages displayed on the multi-information display.

• Use the recommended viscosity engine oil, displaying the API Certification Seal.
• Maintain the specified tire pressure.
• Do not load the vehicle with excess cargo.
• Keep your vehicle clean. A buildup of snow or mud on your vehicle's underside adds weight and increases wind resistance.

Direct calculation is the recommended method to determine actual fuel consumed while driving.

\[
\begin{array}{c|c|c|c|c}
\text{Miles driven} & \div & \text{Gallons of fuel} & = & \text{Miles per Gallon} \\
100 & \times & \text{Liter} & \div & \text{Kilometers} = \text{L per 100 km}
\end{array}
\]

In Canada, posted fuel economy numbers are established following a simulated test. For more information on how this test is performed, please visit [http://oee.nrcan.gc.ca/](http://oee.nrcan.gc.ca/)
Accessories and Modifications

Accessories
When installing accessories, check the following:

• Do not install accessories on the windshield. They can obstruct your view and delay your reaction to driving conditions.

• Do not install accessories on the side pillars or across the side windows. Accessories installed in these areas may interfere with proper operation of the side curtain airbags.

• Be sure electronic accessories do not overload electrical circuits or interfere with proper operation of your vehicle.

Fuses P. 294

• Before installing any electronic accessory, have the installer contact a dealer for assistance. If possible, have a dealer inspect the final installation.

Modifications
Do not modify your vehicle or use non-Acura components that can affect its handling, stability, and reliability.

Overall vehicle performance can be affected. Always make sure all equipment is properly installed and maintained, and that it meets federal, state, province, territory, and local regulations.

WARNING
Improper accessories or modifications can affect your vehicle's handling, stability, and performance, and cause a crash in which you can be seriously hurt or killed.

Follow all instructions in this owner's manual regarding accessories and modifications.

Acura Genuine accessories are recommended to ensure proper operation on your vehicle.
Maintenance

This chapter discusses basic maintenance.
Before Performing Maintenance

Inspection and Maintenance

For your safety, perform all listed inspections and maintenance to keep your vehicle in good condition. If you become aware of any abnormality (noise, smell, insufficient brake fluid, oil residue on the ground, etc.), have your vehicle inspected by a dealer. (Note, however, that service at a dealer is not mandatory to keep your warranties in effect.) Refer to the separate maintenance booklet for detailed maintenance and inspection information.

Types of Inspection and Maintenance

Daily inspections
Perform inspections before long distance trips, when washing the vehicle, or when refueling.

Periodic inspections
- Check the automatic transmission fluid level monthly.  
  \textbf{Automatic Transmission Fluid} P. 242
- Check the brake fluid level monthly.  
  \textbf{Brake/Clutch Fluid} P. 244
- Check the tire pressure monthly. Examine the tread for wear and foreign objects.  
  \textbf{Checking and Maintaining Tires} P. 259
- Check the operation of the exterior lights monthly.  
  \textbf{Replacing Light Bulbs} P. 247
- Check the condition of the wiper blades at least every six months.  
  \textbf{Checking and Maintaining Wiper Blades} P. 257

According to state and federal regulations, failure to perform maintenance on the maintenance main items marked with \# will not void your emissions warranties. However, all maintenance services should be performed in accordance with the intervals indicated by the multi-information display.

Maintenance Service Items P. 227

If you want to perform complex maintenance tasks that require more skills and tools, purchase the service manual.

Authorized Manuals P. 315

If you want to perform maintenance yourself, make sure that you have the necessary tools and skills first. After performing maintenance, update the records in the separate maintenance booklet.
Safety When Performing Maintenance

Some of the most important safety precautions are given here. However, we cannot warn you of every conceivable hazard that can arise in performing maintenance. Only you can decide whether or not you should perform a given task.

### Maintenance Safety

- To reduce the possibility of fire or explosion, keep cigarettes, sparks, and flames away from the battery and all fuel related parts. Never leave rags, towels, or other flammable objects under the hood. Heat from the engine and exhaust can ignite them causing a fire.
- To clean parts, use a commercially available degreaser or parts cleaner.
- Wear eye protection and protective clothing when working with the battery or compressed air.
- Engine exhaust contains carbon monoxide, which is poisonous and can kill you. Only operate the engine if there is sufficient ventilation.

### Vehicle Safety

- The vehicle must be in a stationary condition. Make sure your vehicle is parked on level ground, the parking brake is set, and the engine is off.
- Be aware that hot parts can burn you. Make sure to let the engine and exhaust system cool thoroughly before touching vehicle parts.
- Be aware that moving parts can injure you. Do not start the engine unless instructed, and keep your hands and limbs away from moving parts.
Before Performing Maintenance

Parts and Fluids Used in Maintenance Service

The use of Acura genuine parts and fluids is recommended when maintaining and servicing your vehicle. Acura genuine parts are manufactured according to the same high quality standards used in Acura vehicles.
If the engine oil life is less than 15%, you will see the Maintenance Minder messages appear on the multi-information display every time you turn the ignition switch to ON (\textit{ON}). The messages notify you when to change the engine oil, or when to bring your vehicle to a dealer for indicated maintenance services.

**Displaying the Engine Oil Life**

1. Turn the ignition switch to ON (\textit{ON}).
2. Press the \textit{SEL/RESET} button repeatedly until the engine oil life appears on the multi-information display.

The system message indicator (\(\text{\textbullet}\)) comes on along with the Maintenance Minder message.

Maintenance Minder™

Maintenance Service Items

- Independent of the Maintenance Minder information, replace the brake fluid every 3 years.
- Inspect idle speed every 160,000 miles (256,000 km).
- Adjust the valves during services A, B, 1, 2, or 3 if they are noisy.

Maintenance Minder Message

System Message Indicator

Main Items

Sub Items

Maintenance Main Items

A
- Replace engine oil

B
- Replace engine oil and oil filter
- Inspect front and rear brakes
- Check parking brake adjustment
- Inspect tie rod ends, steering gear box, and boots
- Inspect suspension components
- Inspect driveshaft boots
- Inspect brake hoses and lines (Including ABS)
- Inspect all fluid levels and condition of fluids
- Inspect exhaust system
- Inspect fuel lines and connections

Maintenance Sub Items

1
- Rotate tires

2
- Replace air cleaner element
- Replace dust and pollen filter
- Inspect drive belt

3
- Replace transmission fluid

4
- Replace spark plugs
- Replace timing belt and inspect water pump
- Inspect valve clearance

5
- Replace engine coolant

*1: If message, SERVICE DUE NOW does not appear more than 12 months after the display is reset, change the engine oil every year.
*2: If you drive primarily in dusty conditions, replace the air cleaner element every 15,000 miles (24,000 km).
*3: If you drive primarily in urban areas that have high concentrations of soot in the air from industry and from diesel-powered vehicles, replace the dust and pollen filter every 15,000 miles (24,000 km).
*4: Driving in mountainous areas at very low vehicle speeds or trailer towing results in higher transmission temperatures. This requires transmission fluid changes more frequently than recommended by the Maintenance Minder. If you regularly drive your vehicle under these conditions, have the transmission fluid changed at 60,000 miles (100,000 km), then every 30,000 miles (48,000 km). (For A/T only.)
*5: If you drive regularly in very high temperatures (over 110°F, 43 °C), in very low temperatures (under -20°F, -29°C), or tow a trailer, replace every 60,000 miles/100,000 km. (6-cylinder models only)
# : See information on maintenance and emissions warranty.

Continued
Resetting the Display

Reset the engine oil life display if you have performed the maintenance service.

1. Turn the ignition switch to ON [Ⅰ].
2. Display the engine oil life by repeatedly pressing the SEL/RESET button.
3. Press and hold the SEL/RESET button for 10 seconds or more.
   - The oil life reset mode is displayed on the multi-information display.
4. Select RESET with the ▲/▼ button.
   - The service code will disappear and the engine oil life display will return to 100%.

To cancel the oil life reset mode, select CANCEL, then press the SEL/RESET button.

**NOTICE**
Failure to reset the engine oil life after a maintenance service results in the system showing incorrect maintenance intervals, which can lead to serious mechanical problems.

The dealer will reset the engine oil life display after completing the required maintenance service. If someone other than a dealer performs maintenance service, reset the engine oil life display yourself.

- Brake Fluid (Black Cap)
- Engine Oil Fill Cap
- Automatic Transmission Fluid Dipstick (Yellow Loop)

*: Located under the cover
Opening the Hood

1. Park the vehicle on a level surface, and set the parking brake.

2. Pull the hood release handle under the lower left corner of the dashboard. The hood will pop up slightly.

3. Push up the hood latch lever in the center of the hood to release the lock mechanism, and open the hood.

4. Remove the support rod from the clamp using the grip. Mount the support rod in the hood.

**NOTICE**
Do not open the hood when the wiper arms are raised. The hood will strike the wipers, and may damage either the hood or the wipers.

When closing the hood, check that the hood is securely latched.

If the hood latch lever moves stiffly, or if you can open the hood without lifting the lever, the latch mechanism should be cleaned and lubricated.

When closing, remove the support rod, and stow it in the clamp, then gently lower the hood. Remove your hand at a height of approximately 12 inches (30 cm) and let the hood close.

Continued
Maintenance Under the Hood
Opening the Hood

4. Lift the hood up most of the way.
   - The hydraulic supports will lift it up the rest of the way and hold it up.

When closing, lower it to approximately 12 inches (30 cm), then press down firmly with your hands.
Maintenance Under the Hood

Engine Compartment Covers*

The component parts in the engine compartment are protected by three covers. You may need to remove the covers when you perform certain maintenance work.

To remove the covers:

- Insert a flat-tip screwdriver, lift and remove the central pin to remove the clip.
- Insert the clip with the central pin raised, and push until it is flat.

Right Engine Compartment Cover
Remove the holding clips

Left Engine Compartment Cover
Remove the holding clips

Bulkhead Cover
Remove the holding clips

* Not available on all models
Oil is a major contributor to your engine’s performance and longevity. If you drive the vehicle with insufficient or deteriorated oil, the engine may fail or be damaged.

This seal indicates the oil is energy conserving and that it meets the American Petroleum Institute’s latest requirements.

Use Genuine Acura Motor Oil or another commercial engine oil of suitable viscosity for the ambient temperature as shown below.

- Synthetic oil
  You may also use synthetic motor oil if it is labeled with the API Certification Seal and is the specified viscosity grade.
**Oil Check**

We recommend that you check the engine oil level every time you refuel.

Park the vehicle on level ground.

Wait approximately three minutes after turning the engine off before you check the oil.

1. Remove the dipstick (orange handle).
2. Wipe the dipstick with a clean cloth or paper towel.
3. Insert the dipstick back all the way into its hole.

**4-cylinder models**

1. Remove the dipstick (orange handle).

**6-cylinder models**

1. Remove the dipstick (orange loop).

**All models**

2. Wipe the dipstick with a clean cloth or paper towel.
3. Insert the dipstick back all the way into its hole.

If the oil level is near or below the lower mark, slowly add oil being careful not to overfill.
4. Remove the dipstick again, and check the level. It should be between the upper and lower marks. Add oil if necessary.
Adding Engine Oil

1. Unscrew and remove the engine oil fill cap.
2. Add oil slowly.
3. Reinstall the engine oil fill cap, and tighten it securely.
4. Wait for three minutes and recheck the engine oil dipstick.

If any oil spills, wipe it up immediately. Spilled oil may damage the engine compartment components.

**NOTICE**
Do not fill the engine oil above the upper mark. Overfilling the engine oil can result in leaks and engine damage.
Changing the Engine Oil and Oil Filter

You must change the engine oil and oil filter regularly in order to maintain the engine’s lubrication. The engine may be damaged if they are not changed regularly.

Change the oil and filter in accordance with the maintenance message on the multi-information display.

1. Run the engine until it reaches normal operating temperature, and then turn the engine off.
2. Open the hood and remove the engine oil fill cap.
3. Remove the bolts on the undercarriage and remove the under cover.
4. Remove the drain bolt and washer from the bottom of the engine, and drain the oil into a suitable container.
5. Remove the oil filter and dispose of the remaining oil.
6. Check that the filter gasket is not stuck to the engine contact surface.
   - If it is stuck, you must detach it.

**NOTICE**
You may damage the environment if you do not dispose of the oil in a suitable way. If you are changing the oil by yourself, appropriately dispose of the used oil. Put the oil in a sealed container and take it to a recycling center. Do not throw the oil away into a garbage can or onto the ground.
7. Wipe away dirt and dust adhering to the contact surface of the engine block, and install a new oil filter.

8. Put a new washer on the drain bolt, then reinstall the drain bolt.
   ▶ Tightening torque: 29 lbf-ft (39 N·m, 4.0 kgf-m)

9. Pour the recommended engine oil into the engine.
   ▶ Engine oil change capacity (including filter):
     4-cylinder models
     4.2 US qt (4.0 L)
     6-cylinder models
     4.5 US qt (4.3 L)

10. Reinstall the engine oil fill cap securely and start the engine.

11. Run the engine for a few minutes, and then check that there is no leak from the drain bolt or oil filter.

12. Stop the engine, wait for three minutes, and then check the oil level on the dipstick.
   ▶ If necessary, add more engine oil.

Changing the Engine Oil and Oil Filter

You will need a special wrench to replace the oil filter. You can buy this wrench from a dealer.

When installing the new oil filter follow the instructions supplied with the oil filter.

Reinstall the engine oil fill cap. Start the engine. The low oil pressure indicator should go off within five seconds. If it does not, turn off the engine, and check your work.
Engine Coolant

Specified coolant: Honda Long Life Antifreeze/Coolant Type 2

This coolant is premixed with 50% antifreeze and 50% water. Do not add any straight antifreeze or water.

We recommend you check the engine coolant level every time you refuel. Check the reserve tank first. If it is completely empty, also check the coolant level in the radiator. Add the engine coolant accordingly.

Reserve Tank

1. Remove the right-side engine compartment cover.

   *Engine Compartment Covers P. 233*

2. Check the amount of coolant in the reserve tank.

3. If the coolant level is below the MIN mark, add the specified coolant until it reaches the MAX mark.

4. Inspect the cooling system for leaks.

**NOTICE**

4-cylinder models

If temperatures consistently below -22°F (-30°C) are expected, the coolant mixture should be changed to a higher concentration. Consult a dealer for more information.

If Honda antifreeze/coolant is not available, you may use another major brand non-silicate coolant as a temporary replacement. Check that it is a high quality coolant recommended for aluminum engines. Continued use of any non-Honda coolant can result in corrosion, causing the cooling system to malfunction or fail. Have the cooling system flushed and refilled with Honda antifreeze/coolant as soon as possible.

Do not add rust inhibitors or other additives to your vehicle’s cooling system. They may not be compatible with the coolant or with the engine components.
1. Remove the radiator cap cover.
2. Make sure the engine and radiator are cool.
3. Turn the radiator cap counterclockwise and relieve any pressure in the coolant system. Do not push the cap down when turning.
4. Push down and turn the radiator cap counterclockwise to remove it.
5. The coolant level should be up to the base of the filler neck. Add coolant if it is low.
6. Put the radiator cap back on, and tighten it fully.
7. Pour coolant into the reserve tank until it reaches the MAX mark. Put the cap back on the reserve tank.

**WARNING**
Removing the radiator cap while the engine is hot can cause the coolant to spray out, seriously scalding you. Always let the engine and radiator cool down before removing the radiator cap.

**NOTICE**
Pour the fluid slowly and carefully so you do not spill any. Clean up any spills immediately; they can damage components in the engine compartment.
Transmission Fluid

Automatic Transmission Fluid

Specified fluid: Acura ATF DW-1 (automatic transmission fluid)

Check the fluid level when the engine is at normal operating temperature.

1. Park on level ground, and start the engine.
2. Wait until the radiator fan starts and then turn off the engine.
   >> Perform step 3 after waiting for about 60 seconds (less than 90 seconds).
3. Remove the dipstick (yellow loop) from the transmission and wipe it with a clean cloth.
4. Insert the dipstick all the way back into the transmission securely, as shown in the image.
5. Remove the dipstick and check the fluid level.
   >> It should be between the upper and lower marks in the HOT range.
6. If the level is below the lower mark, add fluid into the dipstick hole to bring it to the level between the upper and lower marks, and have your vehicle checked by a dealer immediately.

NOTICE
Do not mix Acura ATF DW-1 with other transmission fluids.
Using a transmission fluid other than Acura ATF DW-1 may adversely affect the operation and durability of your vehicle's transmission, and damage the transmission.
Any damage caused by using a transmission fluid that is not equivalent to Acura ATF DW-1 is not covered by Acura's new vehicle warranty.

NOTICE
Pour the fluid slowly and carefully so you do not spill any. Clean up any spills immediately; they can damage components in the engine compartment.
Maintenance Under the Hood

Transmission Fluid

Check the fluid level when the engine is at normal operating temperature.

1. Park the vehicle on level ground.
2. Remove the bolts with a wrench, then carefully remove the under cover.
3. Remove the transmission filler bolt and washer. Carefully feel inside the bolt hole with your fingers.
   ➤ Check if the fluid level is up to the edge of the bolt hole.
4. If the fluid level is not up to the edge of the bolt hole, add Acura Manual Transmission Fluid (MTF) until it runs out of the hole.
5. Put a new washer on the filler bolt, then reinstall the filler bolt.
   ➤ Tightening torque: 33 lbf-ft (44 N·m, 4.5 kgf·m)
6. Reinstall the under cover with the bolts.

Manual Transmission Fluid

Specified fluid: Acura Manual Transmission Fluid (MTF)

If Acura MTF is not available, you may use the API certificated SAE 0W-20 or 5W-20 viscosity motor oil as a temporary measure.

Replace with MTF as soon as possible. Motor oil does not contain the proper additives for the transmission and continued use can cause decreased shifting performance and lead to transmission damage.
**Brake/Clutch Fluid**

**Specified fluid: Honda Heavy Duty Brake Fluid DOT 3**

Use the same fluid for both the brakes and clutch.

### Checking the Brake Fluid

The fluid level should be between the MIN and MAX marks on the side of the reservoir.

**NOTICE**

Brake fluid marked DOT 5 is not compatible with your vehicle’s braking system and can cause extensive damage.

If the specified brake fluid is not available, you should use only DOT 3 or DOT 4 fluid from a sealed container as a temporary replacement.

Using any non-Honda brake fluid can cause corrosion and decrease the longevity of the system. Have the brake system flushed and refilled with Honda Heavy Duty Brake Fluid DOT 3 as soon as possible.

If the brake fluid level is at or below the MIN mark, have a dealer inspect for leaks or worn brake pads as soon as possible.
Checking the Clutch Fluid

The fluid level should be between the MIN and MAX marks on the side of the reservoir.

If the clutch fluid level is at or below the MIN mark, have a dealer inspect for leaks or an excessively worn clutch plate as soon as possible.
Refilling Window Washer Fluid

Check the amount of window washer fluid using the washer fluid level gauge on the cap.

If the level is low, fill the washer reservoir.

NOTICE
Do not use engine antifreeze or a vinegar/water solution in the windshield washer reservoir. Antifreeze can damage your vehicle's paint. A vinegar/water solution can damage the windshield washer pump.
Replacing Light Bulbs

Headlight Bulbs

When replacing, use the following bulbs.

<table>
<thead>
<tr>
<th>Bulb Type</th>
<th>Wattage</th>
</tr>
</thead>
<tbody>
<tr>
<td>High beam headlight</td>
<td>60 W (HB3)</td>
</tr>
<tr>
<td>Low beam headlight</td>
<td>55 W (H1 for halogen bulb Type) 35 W (D2S for high voltage discharge type)</td>
</tr>
</tbody>
</table>

High Beam Headlight

1. Remove all the engine compartment covers.

2. Remove the engine coolant reservoir.

NOTICE

Halogen bulbs get very hot when lit. Oil, perspiration, or a scratch on the glass can cause the bulb to overheat and shatter.

The headlight aim is set by the factory, and does not need to be adjusted. However, if you regularly carry heavy items in the trunk or tow a trailer, have the aiming readjusted at a dealer or by a qualified technician.

The HB3 and H1 types are halogen bulbs. When replacing a bulb, handle it by its base, and protect the glass from contact with your skin or hard objects. If you touch the glass, clean it with denatured alcohol and a clean cloth.
3. Remove the fasteners, using a flat-tip screwdriver. Remove the cover of the air intake duct and its upper part.

3. Remove the fasteners, and remove the air intake duct cover.

Headlight Bulbs

The exterior lights’ inside lenses (headlights, brake lamps, etc.) may fog temporarily after a car wash or while driving in the rain. This does not impact the exterior light function. However, if you see a large amount of water or ice accumulated inside the lenses, have your vehicle inspected by a dealer.
Replacing Light Bulbs

Headlight Bulbs

Continued

4. Remove the coupler. It can be removed by pushing the tab.

5. Rotate the old bulb to the left to remove.

6. Insert a new bulb into the headlight assembly and turn it to the right.

7. Insert the coupler into the connector of the bulb.

Replacing Light Bulbs

Headlight Bulbs

High voltage can remain in the circuit for a long period of time after the light is switched off. Do not attempt to inspect or replace the high voltage discharge type bulbs yourself. Ask a dealer to inspect and replace low beam headlights.

Low Beam Headlights

1. Turn the steering wheel all the way to the opposite side from the headlight being replaced.

   **Passenger side:** Turn the steering wheel to the left.

   **Driver side:** Turn the steering wheel to the right.

2. Remove the holding clips and screws, and pull the inner fender back.

3. Rotate the cover to the left, and remove.

   ![Diagram](image-url)
Replacing Light Bulbs

4. Unhook the hook, and pull out the connector.

5. Remove the old bulb and insert the new bulb.

6. Put the connector back into the headlight assembly.

Fog Light Bulbs

When replacing, use the following bulbs.

1. Remove the clips using a flat-tip screwdriver, and lower the under cover.

Fog Light: 55 W

NOTICE
Halogen bulbs get very hot when lit. Oil, perspiration, or a scratch on the glass can cause the bulb to overheat and shatter.

The fog lights are halogen bulbs. When replacing a bulb, handle it by its plastic case, and protect the glass from contact with your skin or hard objects. If you touch the glass, clean it with denatured alcohol and a clean cloth.
Replacing Light Bulbs

2. Remove the coupler.
   - It can be removed by pushing the tab.
3. Rotate the old bulb to the left to remove.
4. Insert a new bulb into the fog light assembly and turn it to the right.
5. Insert the coupler into the connector of the bulb.

**Front Turn Signal/Parking/Side Marker Light Bulbs**

When replacing, use the following bulbs.

**Front Turn Signal/Parking/Side Marker: 21/5W**

Turn the steering wheel and pull the inner fender back in the same way as when replacing the low beam headlights.

**Changing the Low Beam Headlight** P. 250

1. Turn the socket to the left and remove it.
2. Push in the old bulb, rotate to the left until it unlocks, and remove.
3. Insert a new bulb.
Replacing Light Bulbs

Side Turn Signal/Emergency Indicator Light Bulbs

Door mirrors have the side turn lights. Have an authorized Acura dealer inspect and replace the light bulbs.

Brake Light, Taillight, Rear Turn Signal Light and Rear Side Marker Light Bulbs

When replacing, use the following bulbs.

- Brake/Taillight: 21/5 W
- Rear Turn Signal Light: 21 W
- Rear Side Marker Light: 3 CP

1. Pull out and remove the cover.

Continued
2. Turn the socket to the left and remove it.
   Remove the old bulb.

3. Remove the old bulb and insert a new bulb.

---

**Back-Up Light Bulbs**

When replacing, use the following bulbs.

**Back-Up Light: 21 W**

1. Remove the clip in the trunk using a flat-tip screwdriver.

2. Pull out the lining.
Replacing Light Bulbs

Rear License Plate Light Bulbs

3. Turn the socket to the left and remove.
4. Remove the old bulb and insert the new bulb.

Rear License Plate Light Bulbs

Have an authorized Acura dealer inspect and replace the light bulbs.
High-Mount Brake Light Bulbs

When replacing, use the following bulbs.

**High-Mount Brake Light: 21 W**

1. Open the trunk.
2. Turn the socket to the left and remove it.
3. Remove the old bulb and insert a new bulb.
Checking and Maintaining Wiper Blades

Checking Wiper Blades
If the wiper blade rubber has deteriorated, it will leave streaks and the metal wiper arm may scratch the window glass.

Changing the Wiper Blade Rubber

1. Lift the driver side wiper arm first, then the passenger side.

2. Place a cloth on the edge of the lock tab. Push the lock tab up with a flat-tip screw driver.

3. Slide the blade from the wiper arm.

NOTICE
Avoid dropping the wiper arm; it may damage the windshield.
4. Slide the wiper blade out from its holder by pulling the tabbed end out.

5. Remove the retainers from the rubber blade that has been removed, and mount to a new rubber blade. Correctly align the rubber protrusion and the retainer grooves.

6. Slide the new wiper blade onto the holder from the bottom end. The tab on the holder should fit in the indent of the wiper blade.

7. Slide the wiper blade onto the wiper arm, then push down the lock tab.

8. Lower the passenger side wiper arm first, then the driver side.
Checking and Maintaining Tires

Checking Tires

To safely operate your vehicle, your tires must be of the proper type and size, in good condition with adequate tread, and properly inflated.

■ Inflation guidelines

Properly inflated tires provide the best combination of handling, tread life, and comfort. Refer to the driver’s doorjamb label or specification’s page for the specified pressure.

Underinflated tires wear unevenly, adversely affect handling and fuel economy, and are more likely to fail from overheating.

Overinflated tires make your vehicle ride harshly, are more prone to road hazards, and wear unevenly.

Every day before you drive, look at each of the tires. If one looks lower than the others, check the pressure with a tire gauge.

At least once a month or before long trips, use a gauge to measure the pressure in all tires, including the spare. Even tires in good condition can lose 1 to 2 psi (10 to 20 kPa, 0.1 to 0.2 kgf/cm²) per month.

■ Inspection guidelines

Every time you check inflation, also examine the tires and valve stems.

Look for:

- Bumps or bulges on the side or in the tread. Replace the tire if you find any cuts, splits, or cracks in the side of the tire. Replace it if you see fabric or cord.
- Remove any foreign objects and inspect for air leaks.
- Uneven tread wear. Have a dealer check the wheel alignment.
- Excessive tread wear.
- Cracks or other damage around valve stem.

WARNING

Using tires that are excessively worn or improperly inflated can cause a crash in which you can be seriously hurt or killed.

Follow all instructions in this owner’s manual regarding tire inflation and maintenance.

Measure the air pressure when tires are cold. This means the vehicle has been parked for at least three hours, or driven less than 1 mile (1.6 km). If necessary, add or release air until the specified pressure is reached.

If checked when hot, tire pressure can be as much as 4–6 psi (30–40 kPa, 0.3–0.4 kgf/cm²) higher than if checked when cold.

Have a dealer check the tires if you feel a consistent vibration while driving. New tires and any that have been removed and reinstalled should be properly balanced.
Tire and Loading Information Label

The label attached to the driver’s doorjamb provides necessary tire and loading information.

Label Example

TIRE AND LOADING INFORMATION
SEATING CAPACITY: TOTAL 5 [FRONT 2, REAR 3]
The combined weight of occupants and cargo should never exceed 10,500 lbs. or 4794 kg.

<table>
<thead>
<tr>

Tire Identification Number (TIN)

Maximum Tire Load

Maximum Tire Pressure

Tire Size

Tire Sizes

Whenever tires are replaced, they should be replaced with tires of the same size.
Checking and Maintaining Tires

Tire Labeling

The tire identification number (TIN) is a group of numbers and letters that look like the example in the side column. TIN is located on the sidewall of the tire.

Glossary of Tire Terminology

Cold Tire Pressure – The tire air pressure when the vehicle has been parked for at least three hours or driven less than 1 mile (1.6 km).

Load Rating – Means the maximum load that a tire is rated to carry for a given inflation pressure.

Maximum Inflation Pressure – The maximum tire air pressure that the tire can hold.

Maximum Load Rating – Means the load rating for a tire at the maximum permissible inflation pressure for that tire.

Recommended Inflation Pressure – The cold tire inflation pressure recommended by the manufacturer.

Treadwear Indicators (TWI) – Means the projections within the principal grooves designed to give a visual indication of the degrees of wear of the tread.
DOT Tire Quality Grading (U.S. Vehicles)

The tires on your vehicle meet all U.S. Federal Safety Requirements. All tires are also graded for treadwear, traction, and temperature performance according to Department of Transportation (DOT) standards. The following explains these gradings.

■ Uniform Tire Quality Grading

Quality grades can be found where applicable on the tire sidewall between tread shoulder and maximum section width.

■ Treadwear

The treadwear grade is a comparative rating based on the wear rate of the tire when tested under controlled conditions on a specified government test course. For example, a tire graded 150 would wear one and one-half (1 1/2) times as well on the government course as a tire graded 100. The relative performance of tires depends upon the actual conditions of their use, however, and may depart significantly from the norm due to variations in driving habits, service practices and differences in road characteristics and climate.

For example:
- Treadwear 200
- Traction AA
- Temperature A

All passenger car tires must conform to Federal Safety Requirements in addition to these grades.
### Traction

The traction grades, from highest to lowest, are AA, A, B, and C. Those grades represent the tire's ability to stop on wet pavement as measured under controlled conditions on specified government test surfaces of asphalt and concrete. A tire marked C may have poor traction performance.

### Temperature

The temperature grades are A (the highest), B, and C, representing the tire's resistance to the generation of heat and its ability to dissipate heat when tested under controlled conditions on a specified indoor laboratory test wheel. Sustained high temperature can cause the material of the tire to degenerate and reduce tire life, and excessive temperature can lead to sudden tire failure. The grade C corresponds to a level of performance which all passenger car tires must meet under the Federal Motor Vehicle Safety Standard No. 109. Grades B and A represent higher levels of performance on the laboratory test wheel than the minimum required by law.
Wear Indicators

The groove where the wear indicator is located is 1/16 inch (1.6 mm) shallower than elsewhere on the tire. If the tread has worn so that the indicator is exposed, replace the tire. **Worn out tires have poor traction on wet roads.**

Tire Service Life

The life of your tires is dependent on many factors, including driving habits, road conditions, vehicle loading, inflation pressure, maintenance history, speed, and environmental conditions (even when the tires are not in use).

In addition to regular inspections and inflation pressure maintenance, it is recommended that you have annual inspections performed once the tires reach five years old. All tires, including the spare, should be removed from service after 10 years from the date of manufacture, regardless of their condition or state of wear.
Tire and Wheel Replacement

Replace your tires with radials of the same size, load range, speed rating, and maximum cold tire pressure rating (as shown on the tire’s sidewall). Using tires of a different size or construction can cause the ABS and VSA® (vehicle stability assist) system to work incorrectly.

It is best to replace all four tires at the same time. If that isn’t possible, replace the front or rear tires in pairs.

Make sure that the wheel’s specifications match those of the original wheels. If you replace a wheel, only use TPMS specified wheels approved for your vehicle.

WARNING
Installing improper tires on your vehicle can affect handling and stability. This can cause a crash in which you can be seriously hurt or killed.

Always use the size and type of tires recommended in this owner’s manual.
Tire Rotation

Rotating tires according to the maintenance messages on the multi-information display helps to distribute wear more evenly and increase tire life.

- **Tires without rotation marks**
  Rotate the tires as shown here.

- **Tires with rotation marks**
  Rotate the tires as shown here.
Winter Tires

If driving on snowy or frozen roads, mount all season marked “M+S” tires, snow tires, or tire chains; reduce speed; and maintain sufficient distance between vehicles when driving.

Be particularly careful when operating the steering wheel or brakes to prevent skidding.

Use tire chains, snow tires, or all season tires when necessary or according to the law.

When mounting, refer to the following points.

For winter tires:
- Select the size and load ranges that are the same as the original tires.
- Mount the tires to all four wheels.

For tire chains:
- Install them on the front tires only.
- Because your vehicle has limited tire clearance, we strongly recommend using the chains listed below:
  4-cylinder models
  - Cable-type: SCC Radial Chain SC1034
  6-cylinder models
  - Cable-type: SCC Radial Chain SC1038
- Follow the chain manufacturer’s instruction when installing. Mount them as tightly as you can.
- Check that the chains do not touch the brake lines or suspension.
- Drive slowly.

WARNING
Using the wrong chains, or not properly installing chains, can damage the brake lines and cause a crash in which you can be seriously injured or killed.

Follow all instructions in this owner’s manual regarding the selection and use of tire chains.

NOTICE
Traction devices that are the wrong size or improperly installed can damage your vehicle’s brake lines, suspension, body, and wheels. Stop driving if they are hitting any part of the vehicle.

When tire chains are mounted, follow the chain manufacturer’s instructions regarding vehicle operational limits.
Battery

Checking the Battery

Check the battery condition monthly. Look at the test indicator window and check the terminals for corrosion.

If your vehicle’s battery is disconnected or goes dead:

- The audio system is disabled.  
  - Entering the audio security code  P. 140

- The clock resets.  
  - Adjusting the Time  P. 88

- The navigation system is disabled. A PIN code will be required.  
  - Refer to the navigation system manual

Charging the Battery

Disconnect both battery cables to prevent damaging your vehicle’s electrical system. Always disconnect the negative (−) cable first, and reconnect it last.

⚠️ WARNING

The battery gives off explosive hydrogen gas during normal operation. A spark or flame can cause the battery to explode with enough force to kill or seriously hurt you.

When conducting any battery maintenance, wear protective clothing and a face shield, or have a skilled technician do it.

⚠️ WARNING: Battery post, terminals, and related accessories contain lead and lead compounds. Wash your hands after handling.

The test indicator’s color information is on the battery.

When you find corrosion, clean the battery terminals by applying a baking powder and water solution. Rinse the terminals with water. Cloth/towel dry the battery. Coat the terminals with grease to help prevent future corrosion.
Remote Transmitter Care

Replacing the Battery

If the indicator does not come on when the button is pushed, replace the battery.

Battery type: CR1616

1. Unscrew the cover with a small Phillips-head screwdriver. Push a button to pry open the transmitter.

2. Open the keypad.

3. Make sure to replace the battery with the correct polarity.

NOTICE

An improperly disposed of battery can damage the environment. Always confirm local regulations for battery disposal.

Replacement batteries are commercially available or at a dealer.
Climate Control System Maintenance

Dust and Pollen Filter

The climate control system is equipped with a dust and pollen filter that collects pollen, dust, and other debris in the air. The Maintenance Minder™ messages will let you know when to replace the filter.

We recommend that you replace the dust and pollen filter sooner when using your vehicle in areas with high concentrations of dust.

Using an air freshener may reduce the deodorizing effect of the dust and pollen filter, and may reduce its life.

If the air flow from the climate control system deteriorates noticeably, and the windows fog up easily, the filter may need to be replaced. Please contact a dealer for replacement.
Cleaning

Interior Care

Use a damp cloth with a mixture of mild detergent and warm water to remove dirt. Use a clean cloth to remove detergent residue.

Cleaning Seat Belts

Use a soft brush with a mixture of mild soap and warm water to clean the seat belts. Let the belts air dry. Wipe the openings of the seat belt anchors using a clean cloth.

Do not spill liquids inside the vehicle.

Electrical devices and systems may malfunction if liquids are splashed on them.

Do not use silicone based sprays on electrical devices such as audio devices and switches. Doing so may cause the items to malfunction or a fire inside the vehicle.

If a silicone based spray is inadvertently used on electrical devices, consult a dealer.

Depending on their composition, chemicals and liquid aromatics may cause discoloration, wrinkles, and cracking to resin-based parts and textiles. Do not use alkali solvents or organic solvents such as benzene or gasoline.

After using chemicals, make sure to gently wipe them off using a dry cloth.

Do not place used cloths on top of resin based parts or textiles for long periods of time without washing.
Cleaning & Interior Care

Floor Mats

The front floor mats hook over the floor anchors, which keep the mats from sliding forward. To remove a mat for cleaning, turn the anchor knobs to the unlock position. When reinstalling the mat after cleaning, turn the knobs to the lock position.

Do not put additional floor mats on top of the anchored mats.

Maintaining Genuine Leather*

Vacuum dirt and dust from the leather frequently. Pay close attention to the pleats and seams. Clean the leather with a soft cloth dampened with a 90% water and 10% neutral soap solution. Then buff it with a clean, dry cloth. Remove any dust or dirt on leather surfaces immediately.

* Not available on all models

Floor Mats

If you use any floor mats that were not originally provided with your vehicle, make sure they are designed for your specific vehicle, fit correctly, and are securely anchored by the floor anchors.

Position the rear seat floor mats properly. If they are not properly positioned, the floor mats can interfere with the front seat functions.
Exterior Care

Dust off the vehicle body after you drive.

Regularly inspect your vehicle for scratches on painted surfaces. A scratch on a painted surface can result in body rust. If you find a scratch, promptly repair it.

■ Washing the Vehicle

Wash the vehicle regularly. Wash more frequently when driving in the following conditions:
- If driving on roads with road salt.
- If driving in coastal areas.
- If tar, soot, bird droppings, insects, or tree sap are stuck to painted surfaces.

■ Using an Automated Car Wash

Fold in the door mirrors. Make sure to follow the instructions indicated on the automated car wash.

■ Using High Pressure Cleaners

- Keep sufficient distance between the cleaning nozzle and the vehicle body.
- Take particular care around the windows. Standing too close may cause water to enter the vehicle interior. Do not spray water into the engine compartment.
Cleaning

Exterior Care

Applying Wax
A good coat of automotive body wax helps protect your vehicle’s paint from the elements. Wax will wear off over time and expose your vehicle’s paint to the elements, so reapply as necessary.

Maintaining the Bumpers and Other Resin Coated Parts
If you get gasoline, oil, engine coolant, or battery fluid on resin coated parts, they may be stained or the coating may peel. Promptly wipe it away using a soft cloth and clean water.

Cleaning the Window
Wipe using a glass cleaner.

Maintaining Aluminum Wheels
Aluminum is susceptible to deterioration caused by salt and other road contaminants. Use a sponge and mild detergent to wipe away promptly. Be careful not to use harsh chemicals (including some commercial wheel cleaners) or a stiff brush. They can damage the clear coat of the aluminum alloy wheels that helps keep the aluminum from corroding and tarnishing.

NOTICE
Chemical solvents and strong cleaners can damage the paint, metal, and plastic on your vehicle. Wipe up spills immediately.

Maintaining the Bumpers and Other Resin Coated Parts
Ask a dealer about the correct coating material when you want to repair the painted surface of the parts made of resin.

Cleaning the Window
Wires are mounted to the inside of the rear window. Wipe along the same direction as the wires with a soft cloth so as not to damage them.
Handling the Unexpected

This chapter explains how to handle unexpected troubles.

Tools

Types of Tools

- Tool Case
- Wheel Nut Wrench/Jack Handle
- Jack Handle Bar
- Jack

The tools are stored in the trunk.
If a Tire Goes Flat

Changing a Flat Tire

If a tire goes flat while driving, grasp the steering wheel firmly, and brake gradually to reduce speed. Then, stop in a safe place. Replace the flat tire with a compact spare tire. Go to a dealer as soon as possible to have the full-size tire repaired or replaced.

1. Park the vehicle on firm, level, and non-slippery surface and apply the parking brake.

   **Automatic transmission models**
   2. Move the shift lever in P.

   **Manual transmission models**
   2. Move the shift lever in R.

   **All models**
   3. Set the parking brake.

4. Turn on the hazard warning lights and turn the ignition switch to LOCK (O).

Periodically check the tire pressure of the compact spare. It should be set to the specified pressure.

Specified Pressure: 60 psi (420 kPa, 4.2 kgf/cm²)

When driving with the compact spare tire, keep the vehicle speed under 50 mph (80 km/h). Replace with a full-size tire as soon as possible.

The compact spare tire and wheel in your vehicle are specifically for this model.

Do not use them with another vehicle.

Do not use another type of compact spare tire or wheel with your vehicle.

Do not mount tire chains on a compact spare tire.

If a chain-mounted front tire goes flat, remove one of the full-size rear tires and replace it with the compact spare tire. Remove the flat front tire and replace it with the full-size tire that was removed from the rear.

Mount the tire chains on the front tire.

Do not use a puncture-repairing agent on a flat tire, as it can damage the tire pressure sensor.
Changing a Flat Tire

Getting Ready to Replace the Flat Tire

1. Pull the handle on the trunk floor lid and open the lid. Hook the handle to the edge of the trunk opening.

2. Take the tool case out of the trunk. Take the jack and wheel nut wrench out of the tool case.

3. Unscrew the wing bolt, and remove the spacer cone. Then, remove the spare tire.

4. Place a wheel block or rock in front and rear of the wheel diagonal to the flat tire.
5. Place the compact spare tire (wheel side up) under the vehicle body, near the tire that needs to be replaced.

6. Loosen each wheel nut about one turn using the wheel nut wrench.
If a Tire Goes Flat

Changing a Flat Tire

1. Place the jack under the jacking point closest to the tire to be changed.

2. Turn the end bracket (as shown in the image) clockwise until the top of the jack contacts the jacking point. Make sure that the jacking point tab is resting in the jack notch.

3. Raise the vehicle, using the jack handle bar and the jack handle, until the tire is off the ground.

How to Set Up the Jack

1. Place the jack under the jacking point closest to the tire to be changed.

2. Turn the end bracket (as shown in the image) clockwise until the top of the jack contacts the jacking point. Make sure that the jacking point tab is resting in the jack notch.

3. Raise the vehicle, using the jack handle bar and the jack handle, until the tire is off the ground.

WARNING

The vehicle can easily roll off the jack, seriously injuring anyone underneath.

Follow the directions for changing a tire exactly, and never get under the vehicle when it is supported only by the jack.

Do not use the jack with people or luggage in the vehicle.

Use the jack provided in your vehicle.

Other jacks may not support the weight ("load") or their shape may not match.

The following instructions must be followed to use the jack safely:

- Do not use while the engine is running.
- Use only where the ground is firm and level.
- Use only at the jacking points.
- Do not get in the vehicle while using the jack.
- Do not put anything on top of or underneath the jack.
If a Tire Goes Flat

Changing a Flat Tire

1. Remove the wheel nuts and flat tire.

2. Wipe the mounting surfaces of the wheel with a clean cloth.

3. Mount the compact spare tire.

4. Screw the wheel nuts until they touch the lips around the mounting holes, and stop rotating.

5. Lower the vehicle and remove the jack. Tighten the wheel nuts in the order indicated in the image. Go around, tightening the nuts, two to three times in this order.

Wheel nut torque: 80 lbf-ft (108 N·m, 11 kgf-m)

Continued
If a Tire Goes Flat

Changing a Flat Tire

1. Remove the center cap and place the flat tire face down in the spare tire well.

2. Remove the spacer cone from the wing bolt, flip it over, and insert it back on the bolt. Secure the flat tire with the wing bolt.

3. Securely put the jack and wheel nut wrench back in the tool case. Store the case in the trunk.

If you replace a flat tire with the spare tire, the low tire pressure/TPMS indicator comes on while you are driving. After driving for a few miles (kilometers), the indicator will start blinking for a short time and then stay on. CHECK TPMS SYSTEM appears on the multi-information display, but this is normal.

If you replace the tire with a specified regular tire, the warning message on the multi-information display and the TPMS indicator will go off after a few miles (kilometers).

Storing the Flat Tire

1. Remove the center cap and place the flat tire face down in the spare tire well.

2. Remove the spacer cone from the wing bolt, flip it over, and insert it back on the bolt. Secure the flat tire with the wing bolt.

3. Securely put the jack and wheel nut wrench back in the tool case. Store the case in the trunk.

WARNING

Loose items can fly around the interior in a crash and can seriously injure the occupants. Store the wheel, jack, and tools securely before driving.

TPMS and the Spare Tire

The system cannot monitor the pressure of the spare tire. Manually check the spare tire pressure to be sure that it is correct.

Use TPMS specific wheels. Each is equipped with a tire pressure sensor mounted inside the tire behind the valve stem.
# Engine Does Not Start

## Checking the Engine

If the engine does not start, check the starter.

<table>
<thead>
<tr>
<th>Starter condition</th>
<th>Checklist</th>
</tr>
</thead>
</table>
| **Starter doesn’t turn or turns over slowly.**  
The battery may be dead. Check each of the items on the right and respond accordingly. | **Check brightness of the interior light.**  
Turn on interior lights and check brightness.  
- If the interior lights are dim or do not come on at all  
  ➤ [Checking the Battery](#) P. 268  
- If the interior lights come on normally  
  ➤ [Inspecting and Changing Fuses](#) P. 298 |
| **The starter turns over normally but the engine doesn’t start.**  
There may be a problem with the fuse. Check each of the items on the right and respond accordingly. | **Review the engine start procedure.**  
Follow its instructions, and try to start the engine again. ➤ [Starting the Engine](#) P. 191  
**Check the immobilizer system indicator.**  
When the immobilizer system indicator is blinking, the engine cannot be started.  
➤ [Immobilizer System](#) P. 98  
**Check the fuel level.**  
There should be enough fuel in the tank. ➤ [Fuel Gauge](#) P. 75  
**Check the fuse.**  
Check all fuses, or have the vehicle checked by a dealer.  
➤ [Inspecting and Changing Fuses](#) P. 298  
**If the problem continues:**  
➤ [Emergency Towing](#) P. 299 |

If you must start the vehicle immediately, use an assisting vehicle to jump start it.  
➤ [Jump Starting](#) P. 284
Jump Starting

Jump Starting Procedure

Turn off the power to electric devices, such as audio and lights. Turn off the engine, then open the hood.

1. Slide out the battery terminal cover.

2. Connect the first jumper cable to your vehicle’s battery + terminal.

3. Connect the other end of the first jumper cable to the assisting vehicle’s + terminal.

4. Connect the second jumper cable to the assisting vehicle’s - terminal.

A battery can explode if you do not follow the correct procedure, seriously injuring anyone nearby.

Keep all sparks, open flames, and smoking materials away from the battery.

Securely attach the jumper cables clips so that they do not come off when the engine vibrates. Also be careful not to tangle the jumper cables or allow the cable ends to touch each other while attaching or detaching the jumper cables.
5. Connect the other end of the second jumper cable:
   - **4-cylinder models with automatic transmission**
     - Engine mounting bolt
   - **4-cylinder models with manual transmission**
     - Transmission mounting bolt
   - **6-cylinder models**
     - Engine hanger

   Do not connect this jumper cable to any other part.

6. If your vehicle is connected to another vehicle, start the assisting vehicle’s engine and increase its rpm slightly.

7. Attempt to start your vehicle’s engine. If it turns over slowly, check that the jumper cables have good metal-to-metal contact.
What to Do After the Engine Starts

Once your vehicle's engine has started, remove the jumper cables in the following order.

1. Disconnect the jumper cable from your vehicle's ground.
2. Disconnect the other end of the jumper cable from the assisting vehicle's
   battery – terminal.
3. Disconnect the jumper cable from your vehicle's battery + terminal.
4. Disconnect the other end of the jumper cable from the assisting vehicle's
   battery + terminal.

Have your vehicle inspected by a nearby service station or a dealer.
Shift Lever Does Not Move

Follow the procedure below if you cannot move the shift lever out of the P position.

**Releasing the Lock**

1. Set the parking brake.
2. Remove the key from the ignition switch.
3. Wrap a cloth around the tip of a small flat-tip screwdriver. Put it into the shift lock release slot as shown in the image, and remove the cover.
4. Insert the key into the shift lock release slot.
5. While pushing on the key down, press the shift lever release button and place the shift lever into N. The lock is now released. Have the shift lever checked by a dealer as soon as possible.
Handling the Unexpected

Overheating

How to Handle Overheating

Overheating symptoms are as follows:
- The temperature gauge needle is at the [H] mark or the engine suddenly loses power.
- Steam or spray comes out of the engine compartment.

First thing to do

1. Immediately park the vehicle in a safe place.

2. Turn off all accessories and turn on the hazard warning lights.
   - **No steam or spray present:** Keep the engine running and open the hood.
   - **Steam or spray is present:** Turn off the engine and wait until it subsides. Then open the hood.

**NOTICE**
Continuing to drive with the temperature gauge needle at the [H] mark may damage the engine.

**WARNING**
Steam and spray from an overheated engine can seriously scald you.
Do not open the hood if steam is coming out.
How to Handle Overheating

Next thing to do

1. Check that the cooling fan is operating and stop the engine once the temperature gauge needle comes down.
   - If the cooling fan is not operating, immediately stop the engine.

2. Once the engine has cooled down, inspect the coolant level and check the cooling system components for leaks.
   - If the coolant level in the reserve tank is low, add coolant until it reaches the MAX mark.
   - If there is no coolant in the reserve tank, check that the radiator is cool. Cover the radiator cap with a heavy cloth and open the cap. If necessary, add coolant up to the base of the filler neck, and put the cap back on.

Last thing to do

Once the engine has cooled sufficiently, restart it and check the temperature gauge. If the temperature gauge needle has gone down, resume driving. If it has not gone down, contact a dealer for repairs.

WARNING

Removing the radiator cap while the engine is hot can cause the coolant to spray out, seriously scalding you.

Always let the engine and radiator cool down before removing the radiator cap.

If the coolant is leaking, contact a dealer for repairs.

Use water as an emergency/temporary measure only. Have a dealer flush the system with proper antifreeze as soon as possible.
If the Low Oil Pressure Indicator Comes On

- **Reasons for the indicator to come on**
  Comes on when the engine oil pressure is low.

- **What to do as soon as the indicator comes on**
  1. Immediately park the vehicle in a safe place.
  2. If necessary, turn the hazard warning lights on.

- **What to do after parking the vehicle**
  1. Stop the engine and let it sit for about one minute.
  2. Open the hood and check the oil level.
     - Add oil as necessary.
  3. Start the engine and check the low oil pressure indicator.
     - The light goes out: Start driving again.
     - The light does not go out within 10 seconds: Stop the engine and contact a dealer for repairs immediately.

If the Charging System Indicator Comes On

- **Reasons for the indicator to come on**
  Comes on when the battery is not being charged.

- **What to do when the indicator comes on**
  Turn off the climate control system, rear defogger, and other electrical systems, and immediately contact a dealer for repairs.
If the Malfunction Indicator Lamp Comes On or Blinks

- Reasons for indicator lamp to come on or blink
  - Comes on when there is a problem with the engine emissions control system, or the fuel fill cap is missing, or loose.
  - Blinks when engine misfiring is detected.

- What to do when the indicator lamp comes on
  Avoid high speeds and immediately get your vehicle inspected at a dealer.

- What to do when the indicator lamp blinks
  Park the vehicle in a safe place with no flammable items and wait at least ten minutes or more with the engine stopped until it cools.

- Tighten Fuel Fill Cap Message

- The message appears on when:
  An evaporative system leak is detected. This may be caused by the fuel fill cap being loose or not being installed.

- What to do when the message appears:
  1. Stop the engine.
  2. Check that the fuel fill cap is fully installed.
     - If not, loosen the cap, and then retighten it until it clicks at least once.
  3. Drive for several days of normal driving.
     - The message should go off.

- When the malfunction indicator lamp comes on:
  Malfunction indicator lamp comes on if the system continues to detect a leak of gasoline vapor. If this happens, check the fuel fill cap using the procedures described above.
If the Brake System Indicator Comes On

<table>
<thead>
<tr>
<th>Reasons for the indicator to come on</th>
</tr>
</thead>
<tbody>
<tr>
<td>• The brake fluid is low.</td>
</tr>
<tr>
<td>• There is a malfunction in the brake system.</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>What to do when the indicator comes on while driving</th>
</tr>
</thead>
<tbody>
<tr>
<td>Press the brake pedal lightly to check pedal pressure.</td>
</tr>
<tr>
<td>• If normal, check the brake fluid level the next time you stop.</td>
</tr>
<tr>
<td>• If abnormal, take immediate action. If necessary, downshift the transmission to slow the vehicle using engine braking.</td>
</tr>
</tbody>
</table>

If the EPS System Indicator Comes On

<table>
<thead>
<tr>
<th>Reasons for the indicator to come on</th>
</tr>
</thead>
<tbody>
<tr>
<td>• Comes on when there is a problem with EPS system.</td>
</tr>
<tr>
<td>• If you depress the accelerator pedal repeatedly to increase the engine speed while the engine is idling, the indicator comes on, and sometimes the steering wheel becomes harder to operate.</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>What to do when the indicator comes on</th>
</tr>
</thead>
<tbody>
<tr>
<td>Stop the vehicle in a safe place and restart the engine.</td>
</tr>
<tr>
<td>If the indicator comes on and stays on, immediately have your vehicle inspected by a dealer.</td>
</tr>
</tbody>
</table>

**NOTICE**

If you repeatedly turn the steering wheel at an extremely low speed, or hold the steering wheel on the full left or right position for a while, the system heats up. The system goes into a protective mode, and limits its performance. The steering wheel becomes harder and harder to operate. Once the system cools down, EPS system is restored. Repeated operation under these conditions can eventually damage the system.

**If the Brake System Indicator Comes On**

Have your vehicle repaired immediately.

If the brake system indicator and ABS indicator come on simultaneously, the brake distribution system is not working. This can result in vehicle instability under sudden braking.

Have your vehicle inspected by a dealer immediately.
If the Low Tire Pressure/TPMS Indicator Comes On or Blinks

■ Reasons for the indicator to come on or blink
A tire pressure is significantly low. If there is a problem with the TPMS or the compact spare tire is installed, the indicator blinks for about one minute, and then stays on.

■ What to do when the indicator comes on
Stop your vehicle in a safe place. Check the tire pressure and adjust the pressure to the specified level. The specified tire pressure is on a label on the driver side doorjamb.

■ What to do when the indicator blinks
Have the tire inspected by a dealer as soon as possible. If the compact spare tire causes the indicator to blink, change the tire to a full-size tire. The indicator goes off after driving for a few miles (kilometers).

NOTICE
Driving on an extremely underinflated tire can cause it to overheat. An overheated tire can fail. Always inflate your tires to the prescribed level.
Fuses

Fuse Locations

If any electrical devices are not working, turn the ignition switch to LOCK [0] and check to see if any applicable fuse is blown.

■ Engine Compartment Fuse Box

Located near the brake fluid reservoir. Push the tabs to open the box.

■ Driver Side Fuse Box

Located under the dashboard.
**Passenger Side Fuse Box**

Located on the lower side panel. Take off the cover to open.

---

Fuse locations are shown on the fuse box cover. Locate the fuse in question by the fuse number and box cover number.
### Circuit Protected and Amps for Each Fuse

The current rating in brackets indicate that you may find a fuse in the location even if your particular model is not equipped with the device the fuse is used for.

* Not available on all models
Inspecting and Changing Fuses

1. Turn the ignition switch to LOCK [0]. Turn headlights and all accessories off.
2. Remove the fuse box cover.
3. Check the large fuse in the engine compartment.
   ▶ If the fuse is blown, use a Phillips-head screwdriver to remove the screw and replace it with a new one.
4. Inspect the small fuses in the engine compartment and the vehicle interior.
   ▶ If there is a burned out fuse, remove it with the fuse puller and replace it with a new one.

NOTICE
Replacing a fuse with one that has a higher rating greatly increases the chances of damaging the electrical system. If you do not have a replacement fuse with the proper rating for the circuit, install one with a lower rating.

Replace fuse with a spare fuse of the same specified amperage.
Confirm the specified amperage using the charts on P. 296 and P. 297.

There is a fuse puller on the back of the engine compartment fuse box.
Emergency Towing

Call a professional towing service if you need to tow your vehicle.

■ Flat bed equipment
The operator loads your vehicle on the back of a truck. This is the best way to transport your vehicle.

■ Wheel lift equipment
The tow truck uses two pivoting arms that go under the front tires and lift them off the ground. The rear tires remain on the ground. This is an acceptable way to tow your vehicle.

NOTICE
Trying to lift or tow your vehicle by the bumpers will cause serious damage. The bumpers are not designed to support the vehicle’s weight.

NOTICE
Improper towing such as towing behind a motorhome or other motor vehicle can damage the transmission.

Never tow your vehicle with just a rope or chain. It is very dangerous, since ropes or chains may shift from side to side or break.
When You Cannot Unlock the Fuel Fill Door

1. Open the trunk and pull off the left inside cover.

2. Pull the release lever towards you.
   - The release lever unlocks the fuel fill door when it is pulled, and locks when returned to its original position.

What to Do When Unable to Unlock the Fuel Fill Door

After taking these steps, contact a dealer to have the vehicle checked.
When You Cannot Open the Trunk

What to Do When Unable to Open the Trunk

If you cannot open the trunk, use the following procedure.

1. Remove the rear outer head restraint on the rear left side, and open the tether anchor point cover.

2. Insert the key into the cylinder and turn the key to the right.

After taking these steps, contact a dealer to have the vehicle checked.
This chapter includes your vehicle’s specifications, locations of identification numbers, and other information required by regulation.
Specifications

4-cylinder models

■ Vehicle Specifications

Model: Acura TSX

No. of Passengers:
- Front: 2
- Rear: 3
- Total: 5

Weights:
- Gross Vehicle Weight Rating (U.S.): 4,475 lbs (2,030 kg)*1
  (Canada: 2,030 kg)*1
- Gross Vehicle Weight Rating (U.S.): 4,395 lbs (1,995 kg)*2
  (Canada: 1,995 kg)*2

Gross Axle Weight Rating (Front):
- U.S.: 2,410 lbs (1,095 kg)*1
  (Canada: 1,095 kg)*1
- U.S.: 2,325 lbs (1,055 kg)*2
  (Canada: 1,055 kg)*2

Gross Axle Weight Rating (Rear):
- U.S.: 2,090 lbs (950 kg)
- Canada: 950 kg

Air Conditioning:
- Refrigerant Type: HFC-134a (R-134a)
- Charge Quantity: 15.8 – 17.6 oz (450 – 500 g)
- Lubricant Type: SP-10

*1: Automatic transmission models
*2: Manual transmission models

■ Engine Specifications

Displacement: 144 cu-in (2,354 cm³)

Spark Plugs:
- NGK ILZKR7B-11S
- DENSO SXU22HCR11S

■ Fuel

Fuel Type: Unleaded gasoline, Pump octane number of 91 or higher

Fuel Tank Capacity: 18.5 US gal (70 l)

■ Battery

Capacity/Type: 36AH(S)/45AH(20)

■ Washer Fluid

Tank Capacity:
- U.S.: 2.6 US qt (2.5 ℓ)
- Canada: 4.8 US qt (4.5 ℓ)

■ Light Bulbs

Headlights (Low Beam):
- 35W (D2S)*3
- 55W (H1)*4

Headlights (High Beam):
- 60W (H8)

Fog Lights:
- 55W (H11)

Front Turn Signal/Parking/Side Marker Lights:
- 21/5W

Side Turn Signal Lights (on Door Mirrors):
- LED

Brake/Taillights:
- 21/5W

Rear Turn Signal Lights:
- 21W

Back-Up Lights:
- 1W

### Specifications

#### Brake/Clutch Fluid
- **Specified**: Honda Heavy Duty Brake Fluid DOT 3

#### Transmission Fluid
- **Specified**: Acura ATF DW-1 (automatic transmission fluid) 3.5 US qt (3.3 ℓ) (Change)

#### Engine Oil
- **Recommended**: Acura Genuine Motor Oil 0W-20 4.2 US qt (4.0 ℓ)
- **Capacity**: Change 4.5 US qt (4.3 ℓ) including filter

#### Engine Coolant
- **Specified**: Honda Long-Life Antifreeze/Coolant Type2 1.77 US gal (6.7 ℓ) (change including the remaining 0.196 US gal (0.74 ℓ) in the reserve tank)

#### Tire
- **Regular**: Size P235/45R18 94V 33 (230 [2.3]) psi (kPa [kgf/cm²])
- **Compact Spare**: Size T135/80D16 101M 60 (420 [4.2]) psi (kPa [kgf/cm²])

#### Wheel Size
- **Regular**: 18 x 8J
- **Compact Spare**: 16 x 4T
Identification Numbers

Vehicle Identification Number (VIN)
Your vehicle has a 17-digit vehicle identification number (VIN) used to register your vehicle for warranty purposes, and for licensing and insuring your vehicle. See the image below for the VIN locations.

Engine Number and Transmission Number
See the image below for the locations of your vehicle’s engine number and transmission number.
Devices that Emit Radio Waves

The following products and systems on your vehicle emit radio waves when in operation.

<table>
<thead>
<tr>

</tr>
</tbody>
</table>

Each of the above complies with the appropriate requirements or the required standards of FCC (Federal Communications Commission) and Industry Canada Standard, described below:

As required by the FCC:
This device complies with Part 15 of the FCC rules. Operation is subject to the following two conditions: (1) This device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

Changes or modifications not expressly approved by the party responsible for compliance could void the user’s authority to operate the equipment.

This device complies with Industry Canada Standard RSS-Gen/210/310. Operation is subject to the following two conditions: (1) this device may not cause interference, and (2) this device must accept any interference, including interference that may cause undesired operation of the device.
Reporting Safety Defects

In the U.S.

If you believe that your vehicle has a defect which could cause a crash or could cause injury or death, you should immediately inform the National Highway Traffic Safety Administration (NHTSA) in addition to notifying American Honda Motor Co., Inc.

If NHTSA receives similar complaints, it may open an investigation, and if it finds that a safety defect exists in a group of vehicles, it may order a recall and remedy campaign. However, NHTSA cannot become involved in individual problems between you, your dealer, or American Honda Motor Co., Inc.

To contact NHTSA, you may call the Vehicle Safety Hotline toll-free at 1-888-327-4236 (TTY: 1-800-424-9153);

go to http://www.safercar.gov
or write to: Administrator, NHTSA, 1200 New Jersey Avenue, SE., Washington, DC 20590.

You can also obtain other information about motor vehicle safety from http://www.safercar.gov.

In Canada

If you believe that your vehicle has a defect which could cause a crash or could cause injury or death, you should immediately inform Honda Canada Inc. and you may also inform Transport Canada.

If Transport Canada receives similar complaints, it may open an investigation, and if it finds that a safety defect exists in a group of vehicles, it may lead to a recall and remedy campaign. However, Transport Canada cannot become involved in individual problems between you, your dealer, or Honda Canada Inc.

To contact Transport Canada’s Defect Investigations and Recalls Division, you may call 1-800-333-0510. For more information on reporting safety defects or about motor vehicle safety, go to http://www.tc.gc.ca/roadsafety.
Emissions Testing

Testing of Readiness Codes

Your vehicle uses “readiness codes,” as part of its onboard self diagnostic system. Some states refer to these codes during testing to see if your vehicle’s emissions components are working properly.

The codes may not be read if you go through the testing just after the battery has gone dead or been disconnected.

To check if they are set, turn the ignition switch to ON \( \text{II} \), without starting the engine. The malfunction indicator lamp will come on for several seconds. If it then goes off, the readiness codes are set. If it blinks five times, the readiness codes are not set.

If you are required to have your vehicle tested before the readiness codes are ready, prepare the vehicle for retesting by doing the following:

1. Fill the gas tank to approximately 3/4 full.
2. Park the vehicle and leave the engine off for 6 hours or more.
3. Make sure the ambient temperature is between 40 °F and 95 °F (4 °C and 35 °C).
4. Start the engine without touching the accelerator pedal, and let it idle for 20 seconds.
5. Keep the vehicle in \( \text{P} \) (automatic transmission) or \( \text{N} \) (manual transmission). Increase the engine speed to 2,000 rpm, and hold it there until the temperature gauge rises to at least 1/4 of the scale (about 3 minutes).
6. Let the engine idle with your foot off the accelerator for 20 seconds.

The readiness codes are erased when the battery is disconnected, and set again only after several days of driving under a variety of conditions.

If a testing facility determines that the readiness codes are not set, you may be requested to return at a later date to complete the test.

If the testing facility determines the readiness codes are still not set, see a dealer.
Select a nearby, lightly traveled major highway where you can maintain a speed of 50 to 60 mph (80 to 97 km/h) for at least 20 minutes. Drive on the highway in \texttt{D} (automatic) or 5th (manual). Do not use cruise control. When traffic allows, drive for 90 seconds without moving the accelerator pedal. (Vehicle speed may vary slightly; this is okay.) If you cannot do this for a continuous 90 seconds because of traffic conditions, drive for at least 30 seconds, then repeat it two more times (for a total of 90 seconds).

8. Drive in city/suburban traffic for at least 10 minutes. When traffic conditions allow, let the vehicle coast for several seconds without using the accelerator pedal or the brake pedal.

9. Park the vehicle and leave the engine off for 30 minutes.
Warranty Coverages

■ U.S. Owners

Your new vehicle is covered by these warranties:

*New Vehicle Limited Warranty* – covers your new vehicle, except for the emissions control systems, and accessories, against defects in materials and workmanship.

*Emissions Control Systems Defects Warranty and Emissions Performance Warranty* – these two warranties cover your vehicle's emissions control systems. Time, mileage, and coverage are conditional. Please read your warranty booklet for exact information.

*Seat Belt Limited Warranty* – a seat belt that fails to function properly is covered by a limited warranty. Please read your warranty booklet for details.

*Rust Perforation Limited Warranty* – all exterior body panels are covered for rust-through from the inside for the specified time period with no mileage limit.

*Accessory Limited Warranty* – Acura accessories are covered under this warranty. Time and mileage limits depend on the type of accessory and other factors. Please read your warranty booklet for details.

*Replacement Parts Limited Warranty* – covers all Acura replacement parts against defects in materials and workmanship.
Warranty Coverages

Replacement Battery Limited Warranty – provides prorated coverage for a replacement battery purchased from a dealer.

Replacement Muffler Lifetime Limited Warranty – provides coverage for as long as the purchaser of the muffler owns the vehicle.

Restrictions and exclusions apply to all these warranties. Please read the 2013 Acura warranty information booklet that came with your vehicle for precise information on warranty coverages. Your vehicle’s original tires are covered by their manufacturer. Tire warranty information is in a separate booklet.

Canadian Owners
Please refer to the 2013 warranty manual that came with your vehicle.
For U.S. Owners:
The publications listed below can be purchased from Helm Incorporated. You can order a manual by phone at (800) 782-4356 (credit card orders only), or online at www.helminc.com.

Make an inquiry to Helm Inc. at (800) 782-4356 if you are interested in ordering other models’ or other years’ manuals.

Authorized Manuals

Service Manual:
Covers maintenance and recommended procedures for repair to engine and chassis components. It is written for the journeyman technician, but it is simple enough for most mechanically inclined owners to understand.

Electrical Troubleshooting Manual:
Complements the Service Manual by providing in-depth troubleshooting information for each electrical circuit in your vehicle.

Body Repair Manual:
Describes the procedures involved in the replacement of damaged body parts.

For Canadian Owners:
Si vous avez besoin d’un Manuel du propriétaire en français, veuillez demander à votre concessionnaire de commander le numéro de pièce 33TL1C40
Client Service Information

Acura dealer personnel are trained professionals.

They should be able to answer all your questions. If you encounter a problem that your dealership does not solve to your satisfaction, please discuss it with the dealership’s service manager or general manager. If you are dissatisfied with the decision made by the dealership’s management, contact Acura Client Relations/Services.
