

Seats, Trunk Pass-through Cover

The rear seat armrest is in the center of the rear seat. Pivot it down to use it.

Trunk Pass-through Cover

The trunk pass-through cover can be opened from either side; it folds forward onto the center armrest. Open the cover by sliding the knob downward and pushing or pulling on the cover. To close the cover, swing it up and push firmly on the top. Make sure it latches properly.

Make sure all items in the trunk and those extending through the pass-through are secured.

For security, this cover can be locked and unlocked only with the master key. To lock the cover, insert the key and turn it clockwise.

Never drive with this cover open and the trunk lid open.
See **Carbon Monoxide Hazard** on page [46](#).

Keep the inside and outside mirrors clean and adjusted for best visibility. Be sure to adjust the mirrors before you start driving.

The inside mirror can automatically darken to reduce glare. To turn on this feature, press the button on the bottom of the mirror. The AUTO indicator comes on as a reminder. When it is on, the mirror darkens when it senses the headlights of a vehicle behind you, then returns to normal visibility when the lights are gone. Press the button again to turn off this sensing.

Adjusting the Power Mirrors

1. Move the selector switch to L (driver's side) or R (passenger's side).
2. Push the appropriate edge of the adjustment switch to move the mirror right, left, up, or down.

Mirrors

- When you finish, move the selector switch to the center (off) position. This turns off the adjustment switch so you can't move a mirror out of position by accidentally bumping the switch.

Depending on the position of the selector switch, the left or right side mirror will pivot downward slightly when you shift the transmission into reverse. In the Left position, the left mirror pivots. In the Right position, the right mirror pivots. This gives you a better view of that side of the vehicle while parallel parking. The mirror returns to its original position when you take the transmission out of reverse. To turn this feature off, leave the switch in the center position.

Outside mirror positions can be stored in the driving position memory system (see page 93).

The outside mirrors are heated to remove fog and frost. With the ignition switch in the ON (II) position, turn on the heaters by pressing the button. The indicator in the button comes on as a reminder. Press the button again to turn the heaters off.

Driving Position Memory System

Your Acura has a memory feature for the driver's seat and outside mirror positions.

Two seat and outside mirror positions can be stored in separate memories. You select a memorized position by pushing the appropriate button or using the appropriate remote transmitter (Driver 1 or Driver 2).

Storing a Driving Position in Memory

Store a driving position only when the vehicle is parked.

1. Turn the ignition switch to ON (II). You cannot add a new driving position in the memory unless the ignition switch is in the ON (II) position. You can recall a memorized position with the ignition switch in any position.
2. Adjust the seat to a comfortable position (see page 88). Adjust the outside mirrors for best visibility (see page 91).

3. Press and release the MEMO button on the control panel. You will hear a beep. Immediately press and hold one of the memory buttons (1 or 2) until you hear two beeps. The indicator in the memory button will come on. The current positions of the driver's seat and outside mirrors are now stored.

CONTINUED

Driving Position Memory System

Doing any of the following after pressing the MEMO button will cancel the storing procedure.

- Not pressing a memory button within 5 seconds.
- Readjusting the seat position.
- Readjusting the outside mirror position.

Each memory button stores only one driving position. Storing a new position erases the previous setting stored in that button's memory. If you want to add a new position while retaining the current one, use the other memory button.

Selecting a Memorized Position

To select a memorized position, do this:

1. Make sure the parking brake is set (M/T) or the shift lever is in Park (A/T).
2. Press the desired memory button (1 or 2) until you hear a beep, then release the button.

The system will move the seat and outside mirrors to the memorized positions. The indicator in the selected memory button will flash during movement. When the adjustments are complete, you will hear two beeps, and the indicator will remain on.

Notes for vehicles with M/T

- You cannot select a memorized position if the transmission is in Reverse. Shift to another gear, then select.
- If the parking brake is not set, you must press and hold the memory button until the adjustment is complete.

To stop the system's automatic adjustment, do any of these actions:

- Press any button on the control panel: MEMO, 1, or 2.
- Push any of the adjustment switches for the seat.
- Shift out of Park.
- Adjust the outside mirrors.

If desired, you can use the adjustment switches to change the positions of the seat or outside mirrors after they are in their memorized position. If you change the memorized position, the indicator in the memory button will go out. To keep this driving position for later use, you must store it in the driving position memory.

Seat Heaters

Both front seats are equipped with seat heaters. The ignition switch must be in the ON (II) position to use them. Push the HI side of the switch to rapidly heat up the seat. After the seat reaches a comfortable temperature, push the LO side of the switch. This will keep the seat warm.

The HI or LO indicator stays on until you turn it off by pushing the opposite side of the switch lightly.

In HI, the heater turns off when the seat gets warm, and turns back on after the seat's temperature drops. It continues to cycle as long as you leave it set on HI. The HI indicator stays on as a reminder that you have the heater on.

In LO, the heater runs continuously. It does not cycle with temperature changes.

Follow these precautions whenever you use the seat heaters:

- Use the HI setting only to heat the seats quickly. Select the LO setting when the seats feel warm. The HI setting draws large amounts of current from the battery.
- Do not use the seat heaters, even on the LO setting, if the engine is left idling for an extended period. This can weaken the battery, causing hard starting.

Because of the sensors for the side airbag system, there is no heater in the passenger's seat-back.

Your vehicle's windows are electrically-powered. Turn the ignition switch to ON (II) to raise or lower any window.

Each door has a switch that controls its window. To open the window, push the switch down and hold it. Release the switch when you want the window to stop. Close the window by pulling back on the switch and holding it.

The driver's door armrest has a master power window control panel. To open any window, push down on the appropriate switch and hold it until the window reaches the desired position. To close the window, pull back on the window switch. Release the switch when the window gets to the position you want.

⚠ WARNING

Closing a power window on someone's hands or fingers can cause serious injury.

Make sure your passengers are away from the windows before closing them.

Power Windows

The master control panel also has these features:

AUTO – To open either front window fully, push the window switch firmly down to the second detent, then release it. The window automatically goes down all the way. To stop the window from going all the way down, pull back on the window switch briefly.

To close either front window fully, pull back the window switch firmly to the second detent, then release it. The window automatically goes all the way up. To stop the window from going all the way up, push down on the window switch briefly.

To open or close either front window partially, push down or pull back on the window switch lightly to the first detent, and hold it. The window will stop when you release the switch.

The front passenger's window switch also has the AUTO feature.

Auto Reverse

If either front window runs into any obstacle while it is closing automatically, it will reverse direction, and then stop. To close the window, remove the obstacle, then use the window switch again.

Auto reverse stops sensing when the window is almost closed. You should always check that all passengers and objects are away from the window before closing it.

The MAIN switch controls power to the passenger's windows. With this switch off, the passenger's windows cannot be raised or lowered. The MAIN switch does not affect the driver's window. To cancel this feature, push on the switch again to get it to pop up. Keep the MAIN switch off when you have children in the vehicle so they do not injure themselves by operating the windows unintentionally.

The indicators inside the switches come on when you turn the ignition switch to ON (II).

If your vehicle's battery is disconnected or goes dead, or a front window fuse is removed, the AUTO function could be disabled. If the AUTO function is disabled, do the following:

1. Start the engine. Push down on the front window switch until the window is fully open.
2. Pull back on the front window switch to close the window completely, then hold the switch for a second or two more.

If the power windows do not operate properly after resetting, have your vehicle checked by an Acura dealer.

The power window system has a key-off delay function. The windows will still operate for up to 10 minutes after you turn off the ignition. Opening either front door cancels the delay function. You must turn the ignition switch to ON (II) again before you can operate the windows.
