

Carbon Monoxide Hazard

Your vehicle's exhaust contains carbon monoxide gas. You should have no problem with carbon monoxide entering the vehicle in normal driving if you maintain your vehicle properly.

Have the exhaust system inspected for leaks whenever:

- The vehicle is raised for an oil change.
- You notice a change in the sound of the exhaust.
- The vehicle was in an accident that may have damaged the underside.

WARNING

Carbon monoxide gas is toxic. Breathing it can cause unconsciousness and even kill you.

Avoid any enclosed areas or activities that expose you to carbon monoxide.

High levels of carbon monoxide can collect rapidly in enclosed areas, such as a garage. Do not run the engine with the garage door closed. Even with the door open, run the engine only long enough to move the vehicle out of the garage.

With the tailgate/hatch open, air flow can pull exhaust gas into your vehicle's interior and create a hazardous condition. If you must drive with the tailgate/hatch open, open all the windows and set the heating and cooling system as shown below.

If you must sit in your parked vehicle, even in an unconfined area, with the engine running, adjust the heating and cooling system as follows:

1. Select the Fresh Air mode.
2. Select the  mode.
3. Turn the fan on high speed.
4. Set the temperature control to a comfortable setting.

These labels are in the locations shown. They warn you of potential hazards that could cause serious injury. Read these labels carefully. If a label comes off or becomes hard to read, contact your Honda dealer for a replacement.

DASHBOARD

U.S. models only

⚠ WARNING

Children Can Be KILLED or INJURED by Passenger Air Bag

- The back seat is the safest place for children 12 and under.
