

Controls Near the Steering Wheel

The two levers on the steering column contain controls for driving features you use most often. The left lever controls the turn signals, headlights, and high beams. The right lever controls the windshield washers and wipers.

The hazard warning lights switch is on the dashboard to the right of the center air vents.

* : To use the horn, press the pad around the “H” logo.

Headlights

The rotating switch on the left lever controls the lights. Turning this switch to the “☀” position turns on the parking lights, taillights, instrument panel lights, side-marker lights, and rear license plate lights. Turning the switch to the “☀” position turns on the headlights.

If you leave the lights on with the ignition switch in ACCESSORY (I) or LOCK (0), you will hear a reminder tone when you open the driver's door.

To change from low beams to high beams, push the turn signal lever forward until you hear a click. The blue high beam indicator will light (see page 49). To return to low beams, pull the turn signal lever back.

To flash the high beams, pull the turn signal lever back lightly, then release it. The high beams will come on and go off. The high beams will stay on for as long as you hold the lever back, no matter what position the headlight switch is in.

Daytime Running Lights

Canadian models only

With the headlight switch off, the high beam headlights come on with reduced brightness when you turn the ignition switch to ON (II) and release the parking brake. They remain on until you turn the ignition off, even if you set the parking brake.

The headlights revert to normal operation when you turn them on with the switch.

Instrument Panel Brightness

The buttons in the lower left corner of the instrument panel adjust the brightness of the display in six steps. Push the + or - button five times to see the full range.

The display dims when the parking lights or headlights are turned on. Adjust the brightness to the desired level with the headlight switch off, and also with the headlight switch on. Both settings will remain at those levels until you change them.

With the headlight switch on, you can switch the display to full daytime brightness by pushing and holding the + button. Push the - button to return the display to the original brightness.

Controls Near the Steering Wheel

Turn Signals

Signal a turn or lane change with this lever. Push down on the lever to signal a left turn, and up to signal a right turn. If you push it up or down all the way, the turn signal continues to blink even when you release the lever. It shuts off automatically as you complete the turn.

To signal a lane change, push lightly on the turn signal lever in the proper direction and hold it. The lever will return to the center position as soon as you release it.

Windshield Wipers

This lever controls the windshield wipers and washers. It has five positions:

- MIST: mist
- OFF: off
- INT: intermittent
- LO: low speed
- HI: high speed

To select a position, push the lever up or down.

CONTINUED

Controls Near the Steering Wheel

In intermittent, the wipers operate every few seconds. In low speed and high speed, the wipers run continuously.

To operate the wipers in mist mode, push the control lever up from the OFF position. The wipers run at high speed until you release the lever. This gives you a quick way to clear the windshield.

Windshield Washers

To clean the windshield, pull back on the wiper control lever. The washers spray until you release the lever.

Rear Window Wiper and Washer

To turn on the rear window wiper, turn the ring clockwise to ON. To also use the rear window washer, turn the ring clockwise past ON. The washer will spray as long as you hold the ring in this position. If you turn the ring counterclockwise from the OFF position, the washer will spray without activating the rear window wiper.

The rear window washer uses the same fluid reservoir as the windshield washer.

Hazard Warning

Push the button to the right of the center vents to turn on the hazard warning lights (four-way flashers). This causes all four outside turn signals and both indicators in the instrument panel to flash. Use the hazard warning lights if you need to park in a dangerous area near heavy traffic, or if your car is disabled.

Rear Window Defogger

Manual Operation

The rear window defogger will clear fog, frost, and thin ice from the window. Push the defogger button to turn it on and off. The light in the button lights to show the defogger is on. If you do not turn it off, the defogger will shut itself off after about 25 minutes. It also shuts off when you turn off the ignition. You have to turn it on again when you restart the car.

Automatic Operation

The rear window defogger turns on automatically when you turn the ignition switch ON (II) if the outside temperature is below 32°F (0°C), or if the engine is at ambient temperature. The light in the button does not light.

It will also turn off automatically after 25 minutes.

Make sure the rear window is clear and you have good visibility before starting to drive.

The defogger wires on the inside of the rear window can be accidentally damaged. When cleaning the glass, always wipe side to side.
