

SRS Indicator On with No DTCs or with Open Circuit DTCs?

Check the Deployed History in the HDS/i-HDS

Currently Applies To: All models using the SRS SAE standard

In 2014, we began switching the SRS from the Honda standard to the SAE standard. Under the Honda standard, if an airbag or seat belt has deployed, you see SRS DTCs starting with an **E** or **F**.

Under the SAE standard, if an airbag or seat belt has deployed, you **don't** see any DTCs. Instead, the **SRS Data List** in the HDS/i-HDS shows deployed history like you see here.

The screenshot shows the ACURA HDS/i-HDS interface for a 2016 SRS. The main window displays a 'Full List' of SRS signals with their values and status indicators (red or green bulbs). The signal 'Left Front Airbag, Left Front Seat Belt Tensioner and/or Left Knee Airbag Deployed' is highlighted in blue and shows a green bulb, indicating it is ON. The right pane shows help information for this signal, including 'PARAMETER INFORMATION' and 'SRS INDICATOR STATUS'.

Signal	Value	Units
ECU Maker	TRW	
Left Front Seat Belt Buckle	Unbuckle	Red Bulb
Right Front Seat Belt Buckle	Unbuckle	Red Bulb
Driver Seat Position Sensor	NOT-NEAR	Green Bulb
Number of Front Passenger's Seat Weight Sensor	-	
Left Front Airbag, Left Front Seat Belt Tensioner and/or Left Knee Airbag Deployed	OFF	Green Bulb
Right Front Airbag, Right Front Seat Belt Tensioner and/or Right Knee Airbag Deployed	OFF	Green Bulb
Left Side Airbag, Left Side Curtain Airbag, and/or Left Front Seat Belt Tensioner Deployed	OFF	Green Bulb
Right Side Airbag, Right Side Curtain Airbag, and/or Right Front Seat Belt Tensioner Deployed	OFF	Green Bulb

HELP
4R_CANSRS_Deployed1

Left Front Airbag, Left Front Seat Belt Tensioner and/or Left Knee Airbag Deployed

PARAMETER INFORMATION

- Left front/driver's side airbag, left front seat belt tensioner and/or left knee airbag deployed when this parameter shows ON.

SRS INDICATOR STATUS

- INDICATOR ON

CONDITIONS FOR CANCELING s

- SRS unit replacement

If any of the signals with **Deployed** in their description read **ON** with a **red** bulb, it means that airbag and/or seat belt has deployed.

The SAE standard applies to these models:

Year	Model	Year	Model
2016 and Later	ILX	2014 and Later	RLX
2014 and Later	MDX	2014, 2016 and Later	RLX Hybrid
2017 and Later	NSX	2015 and Later	TLX
2016 and Later	RDX		

So, if you get one of the vehicles listed above back from the body shop with the SRS indicator on with no DTCs or with one or more open circuit DTCs, check the deployed history in the **SRS Data List**. If any of the signals with **Deployed** in their description read **ON** with a **red** bulb, refer to **SRS Component Replacement/Inspection After Deployment** in the service information and make sure that all of the required parts have been replaced.
